Parker

ENGINEERING YOUR SUCCESS.

WARNING — USER RESPONSIBILITY

FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.

- This document and other information from Parker-Hannifin Corporation, its subsidiaries and authorized distributors provide product or system options for further investigation by users having technical expertise.
- The user, through its own analysis and testing, is solely responsible for making the final selection of the system and components and assuring that all performance, endurance, maintenance, safety and warning requirements of the application are met. The user must analyze all aspects of the application, follow applicable industry standards, and follow the information concerning the product in the current product catalog and in any other materials provided from Parker or its subsidiaries or authorized distributors.
- To the extent that Parker or its subsidiaries or authorized distributors provide component or system options based upon data or specifications provided by the user, the user is responsible for determining that such data and specifications are suitable and sufficient for all applications and reasonably foreseeable uses of the components or systems.

Parker Hannifin

The global leader in motion and control technologies

A world class player on a local stage

Global Product Design

Parker Hannifin has more than 40 years experience in the design and manufacturing of drives, controls, motors and mechanical products. With dedicated global product development teams, Parker draws on industry-leading technological leadership and experience from engineering teams in Europe, North America and Asia.

Local Application Expertise

Parker has local engineering resources committed to adapting and applying our current products and technologies to best fit our customers' needs.

Manufacturing to Meet Our Customers' Needs

Parker is committed to meeting the increasing service demands that our customers require to succeed in the global industrial market. Parker's manufacturing teams seek continuous improvement through the implementation of lean manufacturing methods throughout the process. We measure ourselves on meeting our customers' expectations of quality and delivery, not just our own. In order to meet these expectations, Parker operates and continues to invest in our manufacturing facilities in Europe, North America and Asia.

Electromechanical Worldwide Manufacturing Locations

Europe
Littlehampton, United Kingdom
Dijon, France
Offenburg, Germany
Filderstadt, Germany
Milan, Italy

Asia
Wuxi, China
Jangan, Korea
Chennai, India

North America
Rohnert Park, California
Irwin, Pennsylvania
Charlotte, North Carolina
New Ulm, Minnesota

Offenburg, Germany

Local Manufacturing and Support in Europe

Parker provides sales assistance and local technical support through a network of dedicated sales teams and authorized technical distributors throughout Europe.

High Force Electro Thrust Cylinder - ETH

Overview

Description

The ETH electro cylinder closes the gap between pneumatic and hydraulic actuators; it can act as a suitable alternative to both in many applications and can have the added benefit of increasing the reliability of the production process. Taking the costs for air and oil into consideration, you will find that in most cases an electromechanical system such as the ETH electro cylinder offers the more economical solution. Combined with a wide choice of accessories, the ETH becomes a highly customisable solution, suitable for a variety of applications.

Typical applications

- Material handling and feed systems
  - wood working and plastics industries
  - vertical actuators for loading machine tools
  - in the textile industry for tensioning / gripping textile fabrics
  - in the automotive industry for transporting and feeding components
- Testing equipment and laboratory applications
- Valve and flap actuation
- Pressing
- Packaging machinery
- Process automation in the food and beverage industry

Features

- Unrivaled power density - high forces and small frame sizes
- Cabling can be concealed in the profile
- Accessories with integrated force sensors help to spread and even to control forces precisely
- Optimized for safe handling and simple cleaning
- High service life
- Reduced maintenance costs thanks to lubricating access in the cylinder flange
- Easy replacement due to pneumatic ISO flange norm (DIN ISO 15552:2005-12) conformity
- Integrated anti-rotation device
- Reduced noise emission
- All from one source:
  We offer the complete drive train: Drive controllers, motors and gearboxes to match the Electro Cylinder

Technical Characteristics - Overview

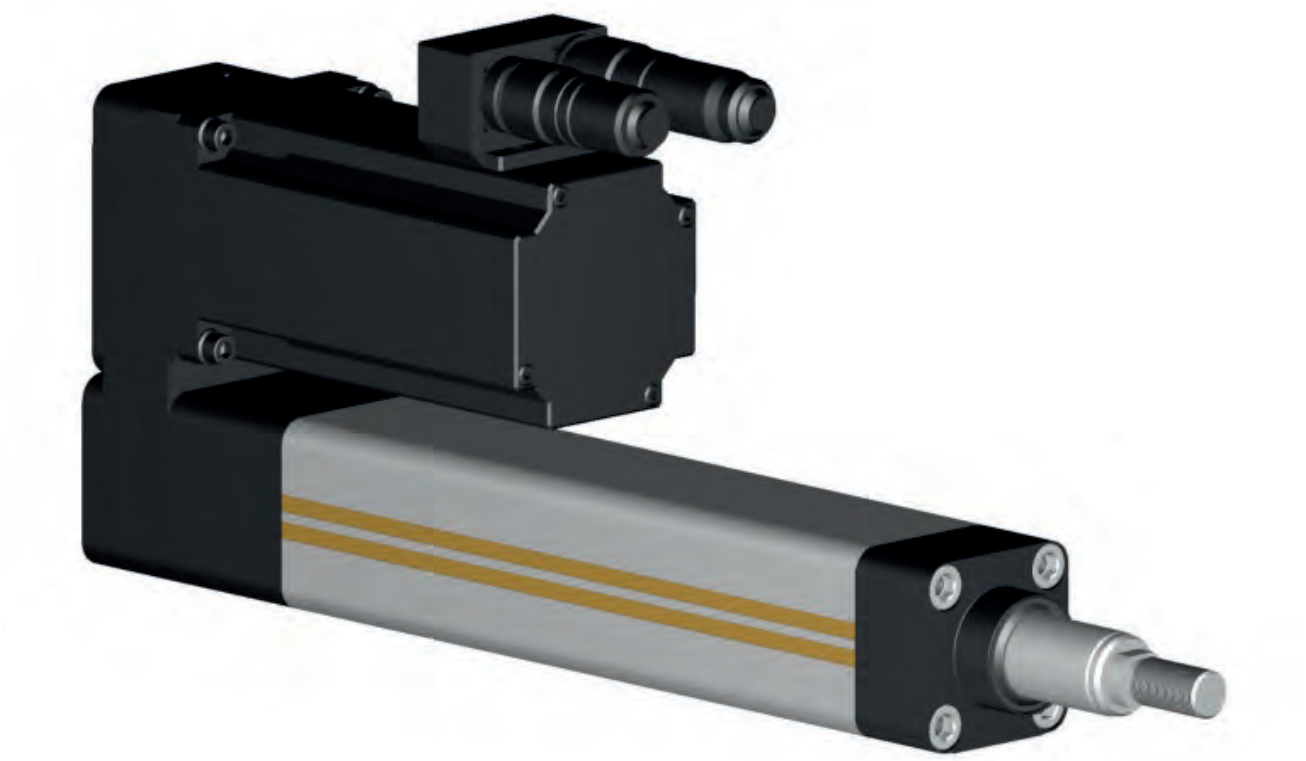
Type	ETH Electro Cylinder
Frame sizes	ETH032 / ETH050 / ETH080 / ETH100 / ETH125
Screw lead	5, 10, 16, 20, 32 mm
Stroke	up to 2000 mm
Traction/thrust force	up to 114000 N
Speed	up to 1.7 m/s
Acceleration	up to 15 m/s²
Equivalent dynamic axial force at a lifetime of 2500 km	up to 49600 N
Efficiency	up to 90 %
Repeatability	up to ± 0.03 mm
Protection classes	IP54 IP54 with stainless screws IP65
Drive	Inline: Axial drive or parallel drive with high performance toothed belt
Directives	2011/65/EC: Conform to RoHS ✓ RoHS
	2014/34/EU (valid from 20. April 2016) 94/9/EC (valid until 19. April 2016) Equipment group II Category 2, authorized for gas atmospheres zone 1 and zone 2
Classification	ETH032, 050: Ex II 2G c IIC T4
	ETH080, 100, 125: Ex II 2G c IIB T4
	Conformity certificate number: EPS 13 ATEX 2 592 X (X: there are special specification of use, please observe the intended use of the ATEX Cylinder)

We also offer customized solutions:

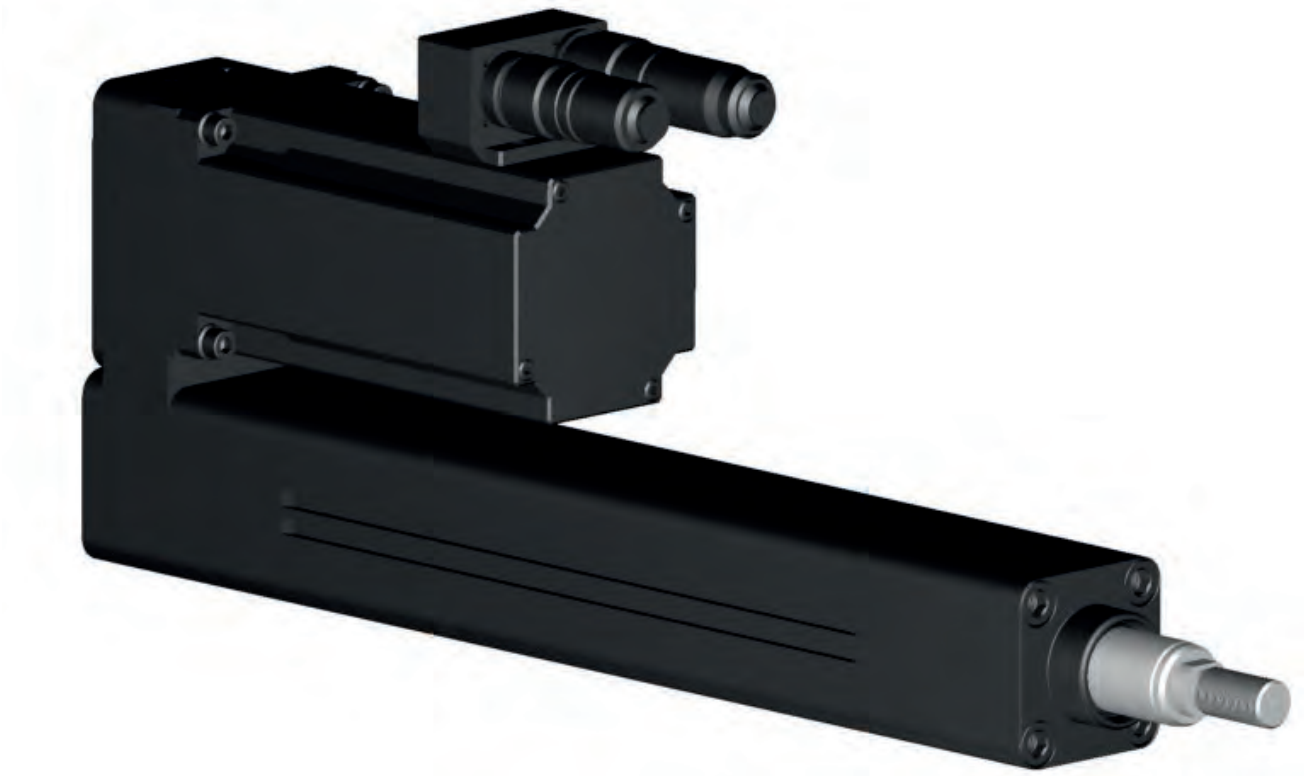
If your application requires a special version of the ETH cylinder, please contact your local Parker Sales Office.

- Oil splash lubrication
- Customized mountings and rod ends
- Mounting of customer motors
- Preparation of the cylinder for use under aggressive environmental conditions
- Overlong thrust rod
- Polished thrust rod
- Thrust rod hard-chrome plated

Parker High Force Electro Thrust Cylinder



ETH IP54 (Standard)[1)]



[1)] ETH032/050/080 ATEX: End caps and drive housing are not anodized

ETH IP65

Product Design

Ballscrew

A high-quality precision class 7 ballscrew in accordance with ISO 3408 is used. The ball bearings between screw and nut ensure a low frictional resistance. This ensures an especially smooth operation over the entire speed range, high service life and excellent efficiency.

Screw support bearing (front end)

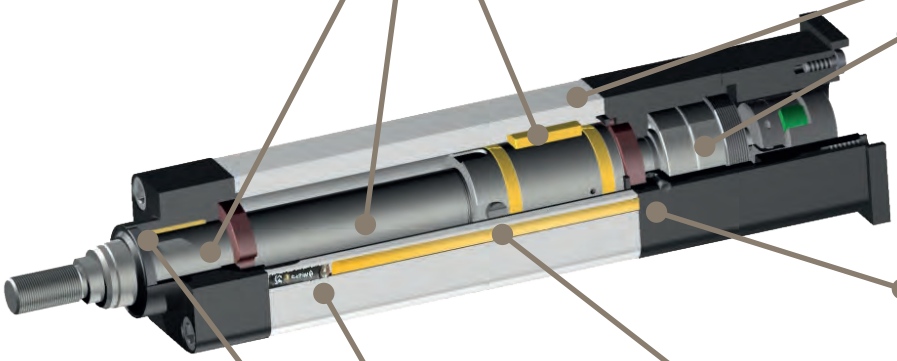
The front screw support bearing is supported by a polymer sliding bearing. This eliminates vibration and run-out. The result is quieter, smoother motion with better precision, longer screw life, and increased dynamic performance.

Piston Rod Anti-rotation Guidance

One of the unique design changes in the ETH is a new anti-rotation device. The high quality, maintenance free polymer bushing offers robust guidance preventing the piston rod from twisting as the rod extends and retracts.

Extruded cylinder body

The extrusion design reduces the number of slots or grooves for a cleaner overall design. The only slots are there for sensor mounting and are easily covered to eliminate any area for debris to be trapped. The result is a cleaner, more environmentally friendly design.



Screw Support Bearing (motor end)

A double stacked set of angular contact bearings allows for high thrust forces in both the extend and retract directions. The result is a design with high force density and minimal clearance when changing directions of motion.

Easy Lubrication Port

The integrated lubrication fitting allows quick, simple and easy access to regrease the ball screw. In the event the rear is inaccessible the port can be located in the center of the extrusion (optional) The result is reduced down time for product maintenance yielding a higher ROI and a longer product life.

Piston Rod Support Bearing & Protection

The extra long cylinder rod bearing allows high lateral load forces. A wiper ring prevents the ingress of external contamination under normal conditions. In the event of fine dust, a high amount of dirt as well as muds and liquids, special sealing is required, which is available on request.

Sensors

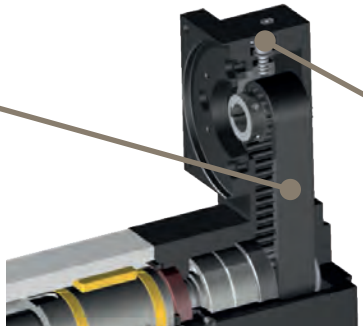
The sensors are directly integrated into the profile; avoiding projecting edges. Cabling is neatly hidden under the yellow cover (fitting sensors available as accessories).

Permanent magnet

All electro cylinders are equipped with several permanent magnets integrated into the screw nut. The permanent magnets actuate the sensors, which can be mounted in the longitudinal grooves of the cylinder body.

Toothed belt transmission

The slip and wear free toothed belt transmission for parallel drive cylinders (motor mounted parallel to the cylinder) features a high efficiency and a transmission ratio of 1:1.



Belt tensioning device

A sophisticated belt tensioning device for parallel motor mounting allows the toothed belt to be pre tensioned precisely.

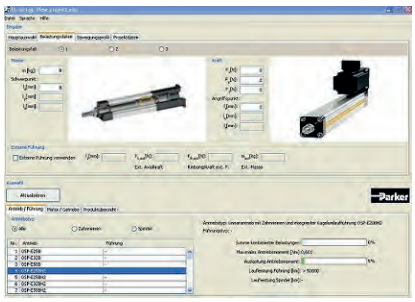
Technical Data apply under normal conditions and only for the individual operating and load modes. In the case of compound loads, it is necessary to verify in accordance with normal physical laws and technical standards whether individual ratings should be reduced. In case of doubt please contact Parker.

Step by Step Selection Process

The following steps help you to specify the most suitable electro cylinder for your application.
If your application's requirements exceed a maximum value, please choose a larger electro cylinder and recheck the maximum values. In some cases a smaller electro cylinder can also meet the requirements.

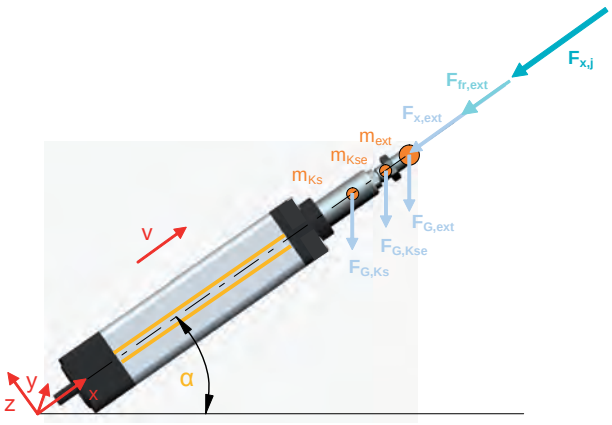


Automated dimensioning with the help of the "EL Sizing Tool"
Download : www.parker.com/eme/eth

Step	Application data	Selection	With the aid of ...
1	ATEX or non-ATEX environment	If used in an ATEX environment, check if the ETH corresponds to the ATEX requirements of your application	"Electro Thrust Cylinder for ATEX Environment" (page 12)
2	Accuracy, ambient conditions	Check the basic conditions for the ETH in your application.	"Technical Characteristics" (page 8)
3	Required space	Check the space available in your application and select a motor mounting option: inline or parallel.	"Dimensions" (page 22)
4	Axial forces	Calculate the axial forces at different points in the application cycle.	"Calculating Required Axial Force" (page 11)
5	Maximum force required	Determine the maximum required axial force (traction and thrust force)	Determination of the maximum required axial force (page 12)
		Select the cylinder using the maximum axial traction/ thrust force (please use the characteristics of your desired motor mounting option: inline or parallel).	"Technical Characteristics" (page 8)
6	Maximum speed	Select the screw lead for the desired cylinder.	"Technical Characteristics" (page 8)
7	Maximum Acceleration	Check if the maximum acceleration is sufficient.	"Technical Characteristics" (page 8)
8	Select stroke	Select the desired stroke: Determine required stroke from 'usable stroke and safety travels'. Select the desired stroke from the list of standard strokes or, if the desired stroke is not listed, define the length of the usable stroke in steps of one mm. Caution! Please respect the minimum and the maximum possible stroke.	"Stroke, Usable Stroke and Safety Travel" (page 20) "Order Code" (page 54) "Technical Characteristics" (page 8)
9	Permissible thrust force taking the buckling risk into consideration	Check the maximum thrust force depending on the stroke and the mounting variant. Check if your application can also utilize a different mounting variant allowing to attain the maximum thrust force.	"Permissible Side Load" (page 18)
10	Service life	Determine the service life with the aid of an equivalent axial force, the operational environment (application factor) and the service life diagrams.	"Service Life" (page 13)
11	Permissible side load	Determine the lateral forces of your application and compare them to the permissible lateral forces (depending on the stroke).	Side load (page 18) Diagrams (page 18)
12	Relubricating cycle	Check if the required relubricating cycle is suitable for your production environment.	"Relubrication" (page 21)
13	Motor / gearbox	Calculate the necessary torque to generate the required force at the ETH. Select a suitable motor.	"Motor and Gearbox Selection" (page 26)
14	Motor mounting flange	Select a suitable motor mounting flange.	"Motor Mounting Options" (page 23)
15	Mounting type	Select the electro cylinder mounting method.	"Mounting Methods" (page 27)
16	Cylinder rods	Select the cylinder rod end for load mounting.	"Cylinder Rod Version" (page 33)

Calculating Required Axial Force

Formulas 1 & 2 below give the mathematical equation for calculating the thrust required to extend or retract the piston rod.
With the aid of the axial forces, it is possible to check if the electro cylinder is able to provide the required forces and if the maximum buckling load is respected. The axial forces are also used as the calculation basis for the service life.



Service loading

Formula symbols (Formula 1-2)

$F_{x,a,j}$	=	Axial forces during extension in N
$F_{x,e,j}$	=	Axial forces during retraction in N
$F_{x,ext}$	=	External axial force in N
$F_{G,ext}$	=	Weight force caused by an additional mass in N
$F_{G,Kse}$	=	Weight force caused by the cylinder rod end in N
$F_{G,Ks}$	=	Weight force caused by the cylinder rod in N
m_{ext}	=	Additional mass in kg
m_{Kse}	=	Mass of the cylinder rod end in kg (see "Cylinder Rod Version" page 33)
$m_{Ks,0}$	=	Mass of the cylinder rod at zero stroke in kg (see table "Technical Data" page 8)
$m_{KS,stroke}$	=	Mass of the cylinder rod per mm of stroke in kg (see table "Technical Data" page 8)
Stroke	=	Selected stroke in m
$a_{K,j}$	=	Acceleration at the cylinder rod in m/s²
α	=	Alignment angle in °
$F_{x,max}$	=	Maximum permissible axial force in N
$F_{fr,ext}$	=	External friction force in N

Index "j" for the individual segments of the application cycle

Calculation of axial forces

Determine the axial forces occurring during each individual segment of the application cycle.

Cylinder rod extending:

$$F_{x,a,j} = F_{x,ext} + F_{fr,ext} + (m_{ext} + m_{Kse} + m_{Ks,0} + m_{Ks,Stroke} \bullet Stroke) \bullet (a_{K,j} + \sin\alpha \bullet 9.81 \frac{m}{s^2})$$

Formula 1

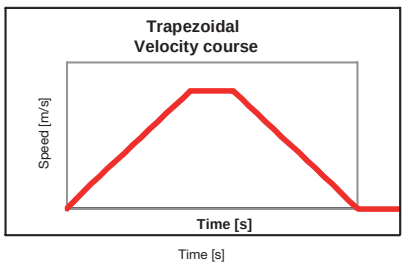
Cylinder rod retracting:

$$F_{x,e,j} = F_{x,ext} - F_{fr,ext} + (m_{ext} + m_{Kse} + m_{Ks,0} + m_{Ks,Stroke} \bullet Stroke) \bullet (-a_{K,j} + \sin\alpha \bullet 9.81 \frac{m}{s^2})$$

Formula 2

Sample calculation:

Vertical mounting
- ETH050
- Stroke = 500 mm = 0.5 m
- Pitch = 5 mm
- Rod End: External thread
- Trapezoidal velocity course
- Acceleration a_K = 4 m/s²
- m_{ext} = 150 kg
- $F_{x,ext}$ = 1000 N
- m_{Kse} = 0.15 kg
- $m_{Ks,0}$ = 0.15 kg
- $m_{Ks,Stroke}$ = 1.85 kg/m
- Alignment angle α = -90°
- External friction force = 30 N



Time [s]

Thrust rod moving forth: Mass is moved downwards

Load case: Acceleration

$$F_{x,a,1} = 1000N + 30N + \left(150kg + 0{,}15kg + 0{,}15kg + 1{,}85\frac{kg}{m} \cdot 0{,}5m\right) \cdot \left(4\frac{m}{s^2} + \sin(-90°) \cdot 9{,}81\frac{m}{s^2}\right) = 151N$$

Load case: Constant Velocity

$$F_{x,a,2} = 1000N + 30N + \left(150kg + 0{,}15kg + 0{,}15kg + 1{,}85\frac{kg}{m} \cdot 0{,}5m\right) \cdot \left(0\frac{m}{s^2} + \sin(-90°) \cdot 9{,}81\frac{m}{s^2}\right) = -454N$$

Load case: Deceleration

$$F_{x,a,3} = 1000N + 30N + \left(150kg + 0{,}15kg + 0{,}15kg + 1{,}85\frac{kg}{m} \cdot 0{,}5m\right) \cdot \left(-4\frac{m}{s^2} + \sin(-90°) \cdot 9{,}81\frac{m}{s^2}\right) = -1058N$$

Thrust rod moving back: Mass is moved upwards

Load case: Acceleration

$$F_{x,e,4} = 1000N - 30N + \left(150kg + 0{,}15kg + 0{,}15kg + 1{,}85\frac{kg}{m} \cdot 0{,}5m\right) \cdot \left(-4\frac{m}{s^2} + \sin(-90°) \cdot 9{,}81\frac{m}{s^2}\right) = -1118N$$

Load case: Constant Velocity

$$F_{x,e,5} = 1000N - 30N + \left(150kg + 0{,}15kg + 0{,}15kg + 1{,}85\frac{kg}{m} \cdot 0{,}5m\right) \cdot \left(0\frac{m}{s^2} + \sin(-90°) \cdot 9{,}81\frac{m}{s^2}\right) = -514N$$

Load case: Deceleration

$$F_{x,e,6} = 1000N - 30N + \left(150kg + 0{,}15kg + 0{,}15kg + 1{,}85\frac{kg}{m} \cdot 0{,}5m\right) \cdot \left(4\frac{m}{s^2} + \sin(-90°) \cdot 9{,}81\frac{m}{s^2}\right) = 91N$$

Selection of the Size and Screw Lead

Required maximum axial force

Determine the maximum axial force (page 11) that the electro cylinder must provide.

Preselection of the electro cylinder

Using the calculated force required, compare the actual electro cylinder specifications (page 8) to determine which profile size will produce enough force.
Once you have determined a profile size, determine that the unit will physically fit in the space allowed by the application (including parallel or inline motor mounts).

Required maximum velocity

The maximum velocity of the electro cylinder depends on the stroke.
With the profile size selected, refer to the critical speed information (page 8) to determine which screw lead works best for the application at the needed stroke length.
When the precise stroke is defined, the velocity must again be verified.

Required maximum acceleration

The maximum acceleration depends on the screw lead and serves as an additional selection criterion for the suitable electro cylinder. It is listed in the "Technical Data" (page 8).

ETH - Electro Thrust Cylinder for ATEX Environment

Parker Hannifin has extended its well known ETH - High Force Electro Thrust Cylinder for the use in explosive atmospheres (ATEX). The new ETH ATEX offers all advantages of the well know ETH Electro Thrust Cylinder and offers even in explosive atmospheres precise motion, positioning, setting and actuating.
The ETH ATEX range is ATEX certified for device group II, category 2 in explosive gas atmospheres.
In conjunction with the ATEX certified EX series servomotors, Parker Hannifin offers a complete drive package for such applications.

Target Market / Applications

A ATEX environment contains a mixture of air and flammable substances such as gas, vapor or fluids which are potentially explosive under atmospheric conditions. ATEX certificated devices are essential for the use under this conditions.

Typical applications:

- Oil & Gas Industry
- Chemical and pharmaceutical industries
- Food processing (distillery)
- Printing & Plastic Industry
- Energy (Generation of Bio gas, gas turbines)
- Automotive industry (Paint finish)
- Waste processing plants

How to proceed when projecting a ATEX Cylinder

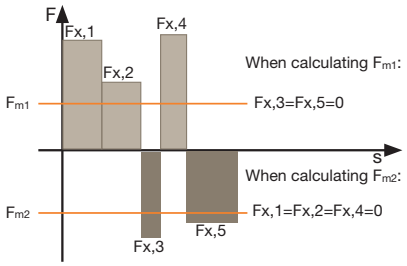
- Project an ETH - Electro Thrust Cylinder by means of this catalogue
- Check by means of the document "ETH ATEX frame conditions for applications" [192-550006] whether the selected ETH - Electro Thrust Cylinder corresponds to all ATEX demands in your application.
- In case the conditions cannot be fulfilled, please choose a larger electro cylinder and recheck the application data (e.g. changed cycle times).
- A application specific release by measuring the self-heating with your application data in our company is possible (see "ETH ATEX frame conditions for applications" [192-550006].

Service Life

Nominal service life[1, 2]

The nominal service life of the electro cylinder can be determined with the aid of the diagrams page 14.
The forces calculated for each individual segment of the application cycle must be summarized into an equivalent axial force Fm "Calculating Required Axial Force" (page 11). If axial forces with different signs apply, two equivalent axial forces must be calculated:

- F_{m1} for all positive forces. The negative forces will convert to zero.
- F_{m2} for all negative forces. The positive forces will convert to zero.



Calculation

$$F_{m1,2} = \sqrt[3]{\frac{1}{s_{total}} (F^3_{x,1} \bullet s_1 + F^3_{x,2} \bullet s_2 + F^3_{x,3} \bullet s_3 + ...)}$$

Formula 3

With the equivalent axial forces, the nominal service life L in km can be read off the diagrams on page 14.

With **load on both sides**, the nominal service life is:

$$L = (L_1^{-1.11} + L_2^{-1.11})^{-0.9}$$

Formula 3.1

Actual service life

The actual service life can only be approximated due to a variety of different effects. The nominal service life L calculation does, for instance, not take insufficient lubrication, impacts and vibrations or critical side loads into consideration. These effects can however be estimated with the aid of the application factor fw.

The actual service life is calculated as follows:

$$L_{fw} = \frac{L}{f_w^3}$$

Formula 4

Application factor f_w

Movement cycle	Shocks/vibrations			
	none	light	medium	heavy
More than 2.5 screw rotations	**1.0**	**1.2**	**1.4**	**1.7**
1.0 to 2.5 screw rotations[3] (short stroke applications)	1.8	2.1	2.5	3.0

[3]After max. 10000 movement cycles, a lubrication run must be performed (see lubrication run intervals for short stroke applications).

Boundary conditions for application factor f_w:

- Externally guided electro cylinders
- Accelerations <10 m/s²

If your application factor is <1.5, please contact Parker.
The same applies for detailed calculations or for special boundary conditions.

Lubrication run lengths for short stroke applications

Lengths of lubrication runs [mm]	ETH032			ETH050			ETH080			ETH100		ETH125	
	M05	M10	M16	M05	M10	M20	M05	M10	M32	M10	M20	M10	M20
	>45	>54	>58	>40	>46	>58	>47	>65	>95	>102	>140	>122	>210

Abbreviations used (formula 3-4)

F_m	=	Equivalent axial force in N
$F_{x,j}$	=	Resulting axial force in N (see formula 1 & formula 2, page 11
s_j	=	Travel given a defined force $F_{x,a,j}$ in mm
s_{total}	=	Total travel in mm
L	=	Nominal service life in km (see "Service Life" diagrams page 14
L_{fw}	=	Service life respecting the application factor in km
f_w	=	Application factor (see table "Application factor" page 13

Index "j" for the individual segments of the application cycle

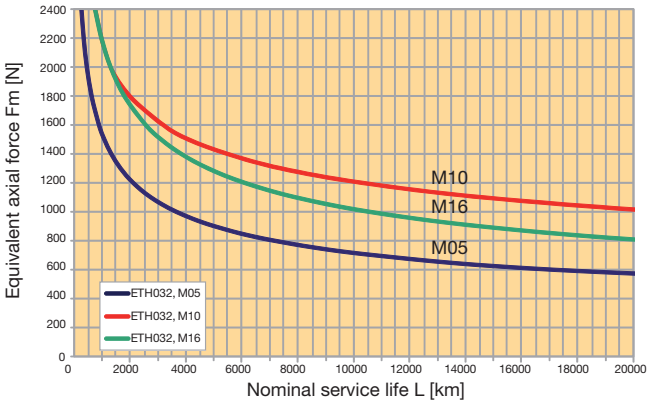
If you need the service life as the number of possible cycles, just divide the service life in kilometers by twice the stroke traveled. i.e. Standstill times are not taken into consideration when determining the equivalent axial force (F_m), as s_j=0. Caution, do always consider the stroke as well as the return stroke.

[1]The nominal service life is the service life reached by 90 % of a sufficient number of similar electro cylinders until the first signs of material fatigue occur.
[2] ATEX cylinders feature a reduced the service life. Please note the brochure on "intended use" (192-550004).

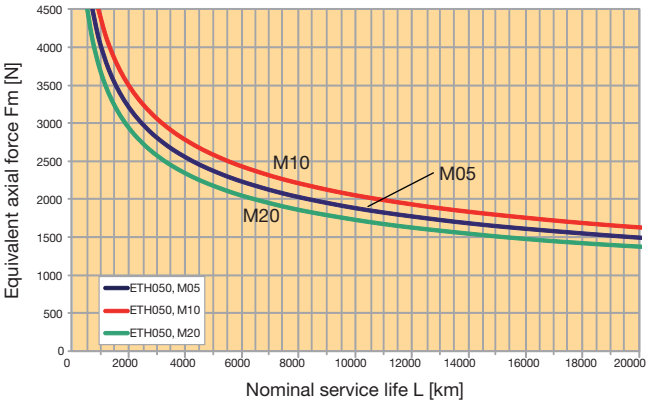
Diagrams [2]

The given values apply when adhering to the recommended lubrication intervals (see relubrication). The diagrams were established in accordance with DIN ISO 3408-5

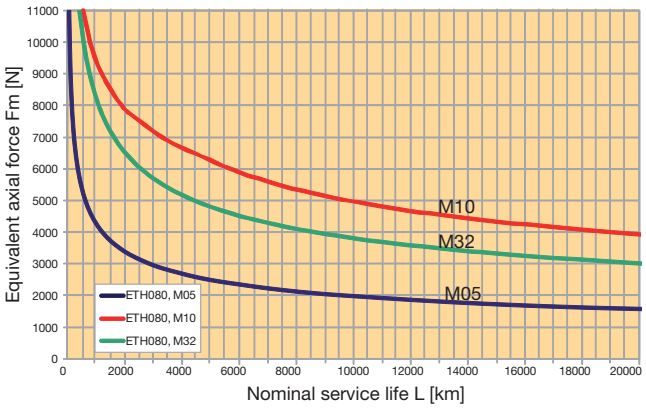
ETH032



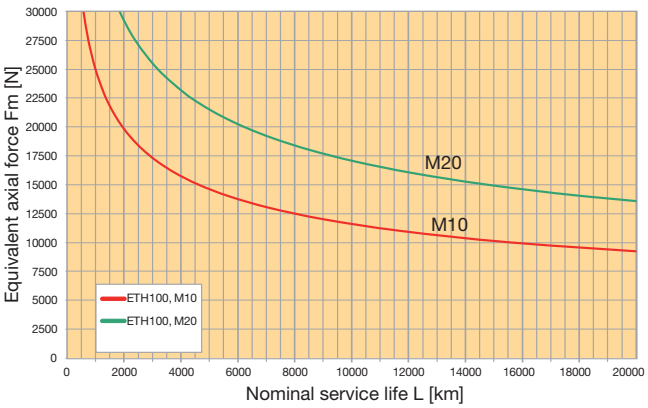
ETH050



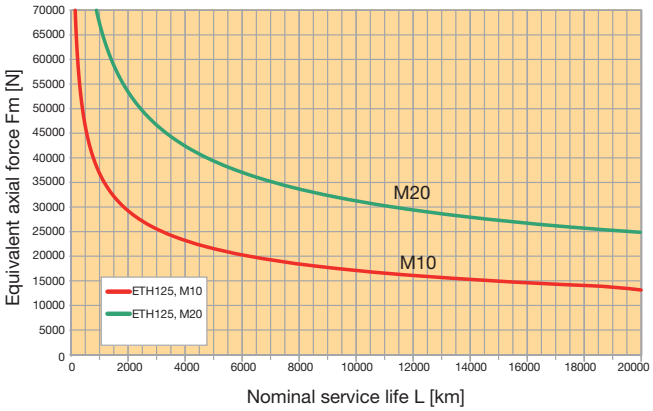
ETH080



ETH100



ETH125



Prerequisites for nominal service life

- Bearing and screw temperature between 20 °C and 40 °C.
- No impairment of the lubrication, for example by external particles.
- Relubrication in accordance with the specifications.
- The given values for thrust force, speed and acceleration must be adhered to at any rate.
- No approaching the mechanical end stops (external or internal), no other abrupt loads, as the given maximum force of the cylinder may never be exceeded.
- No external side loads
- Application factor fw = 1. In order to calculate the real service life and the corresponding application factor, please refer to chapter "Service Life" see page 13
- No high exploitation of several power features at a time (for example maximum speed or thrust force).
- No regulating oscillation at standstill.

[2] ATEX cylinders feature a reduced the service life. Please note the brochure on "intended use" (192-550004).

Permissible Torque with motor in parallel

The transmittable torque with parallel motor mounting is restricted by the belt transmission depending on the motor speed[1] or on the screw pitch selected.

Conversion

The conversion from transmittable torque to the resulting axial tensile force / compressive force to the axial speed can be calculated using formulas 9 and 10.

$$F_{x,j} = M_{motor} \bullet \text{Force constant}$$ Formula 9

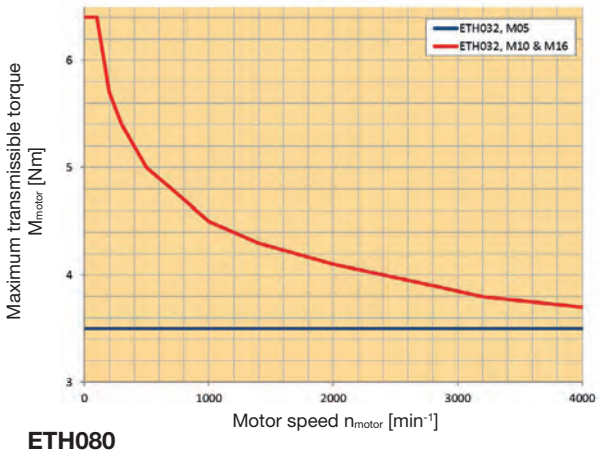
$$v_{ETH} = \frac{n_{motor}}{60} \bullet P_{ETH}$$ Formula 10

Abbreviations used (formula 9-10)

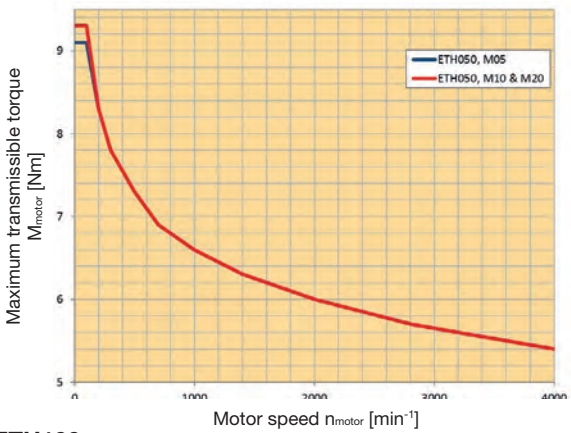
$F_{x,j}$ = Axial tensile force / compressive force
P_{ETH} = Lead screw pitch in mm
v_{ETH} = Travel speed in mm / s
M_{motor} = Motor torque in Nm
n_{motor} = Motor speed in min^{-1}
Force constant: Force constant, parallel motor mounting N/Nm (Technical data; page 8, 9)

Diagrams

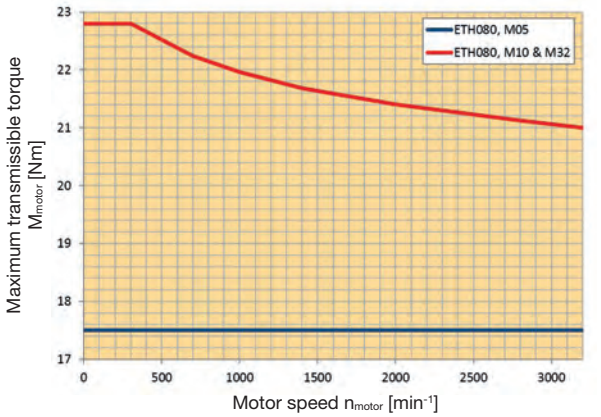
ETH032



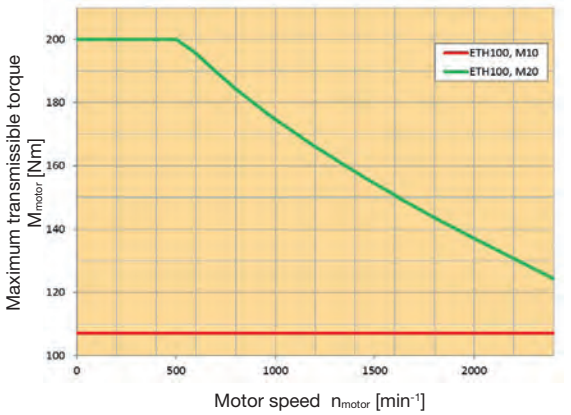
ETH050



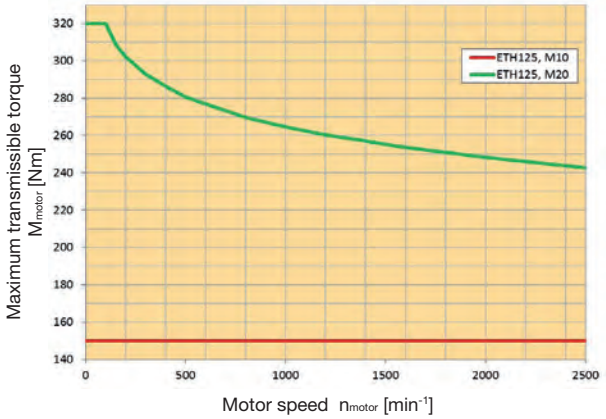
ETH080



ETH100



ETH125



[1] Please observe the maximum permitted, stroke-dependent speed of the cylinder selected (page 8, 9).

Permissible Axial Thrust Forces

Limited by the risk of buckling, depending on the stroke and the mounting method; traction forces do not pose any buckling risk.
Please check if the maximum axial force ((page 11)) is possible with the planned mounting method and for the desired stroke

Diagrams

Case 1

Cylinders fixed with mounting flanges, foot mounting or mounting plates.
Cylinder always fixed at the front end as well.
Thrust rod with axial guiding.

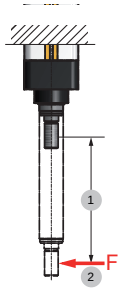
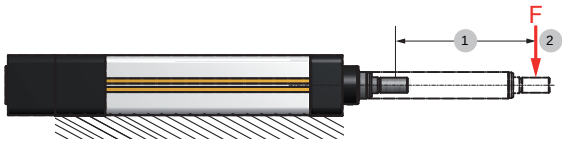
Permissible Side Load [1)]

The electro cylinder features a generously dimensioned cylinder rod and screw nut bearing in the form of high-quality plastic sliding elements to absorb the side load. Please note that electro cylinders with a longer stroke permit a higher lateral force at the same extension length. It may therefore be useful to choose a longer stroke than required for the application in order to increase the permissible lateral force.
If the permissible lateral forces are exceeded or if the maximum axial force occurs at the same time, the optional outrigger bearing (option R) must be used.

Permissible lateral forces in vertical mounting position

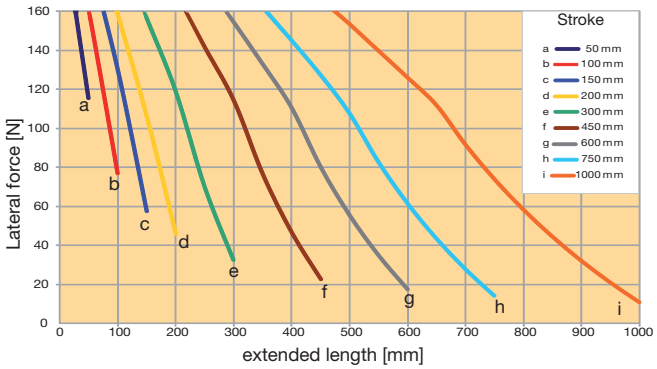


Permissible lateral forces in horizontal mounting position

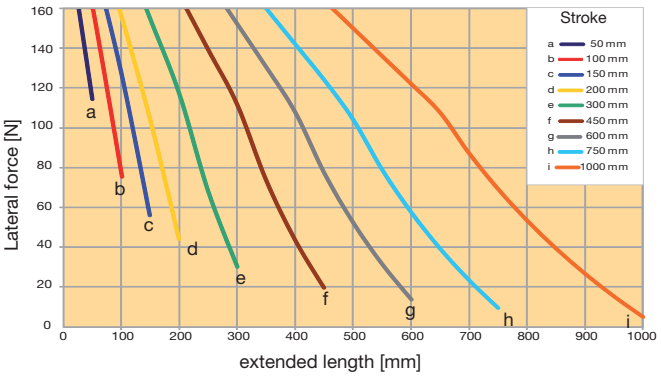


1: Extended length
2: Force application - at the middle of the cylinder rod thread

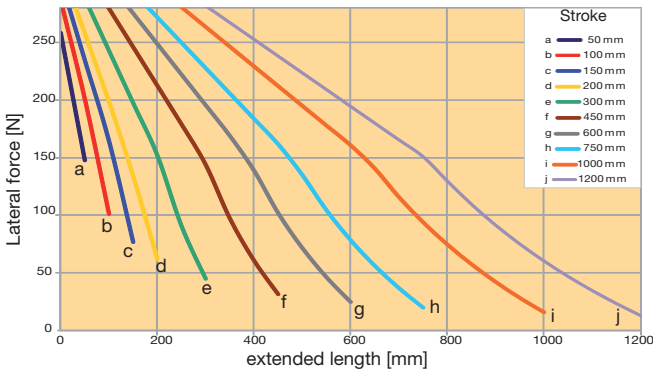
ETH032



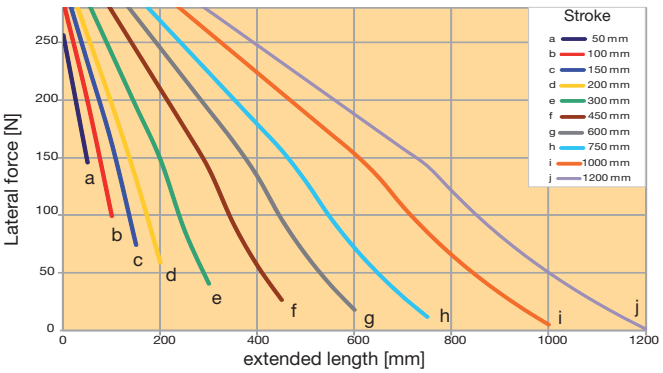
ETH032



ETH050



ETH050



The diagrams apply for an ambient temperature of 20 °C, for all housing orientations and a medium travel speed of 0.5 m/s, (ETH032, ETH050, ETH080) or 0.25 m/s (ETH100, ETH125).

[1)] For ATEX cylinders, side loads are not permitted!

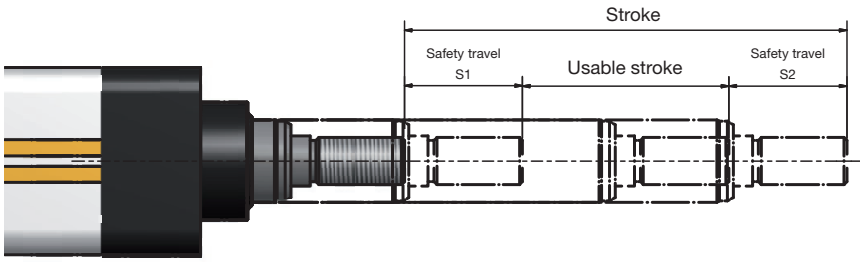
[1] For ATEX cylinders, side loads are not permitted!

Stroke, Usable Stroke and Safety Travel

Calculation

Stroke:

The stroke to be indicated in the order code is the mechanically maximal possible stroke between the internal end stops.



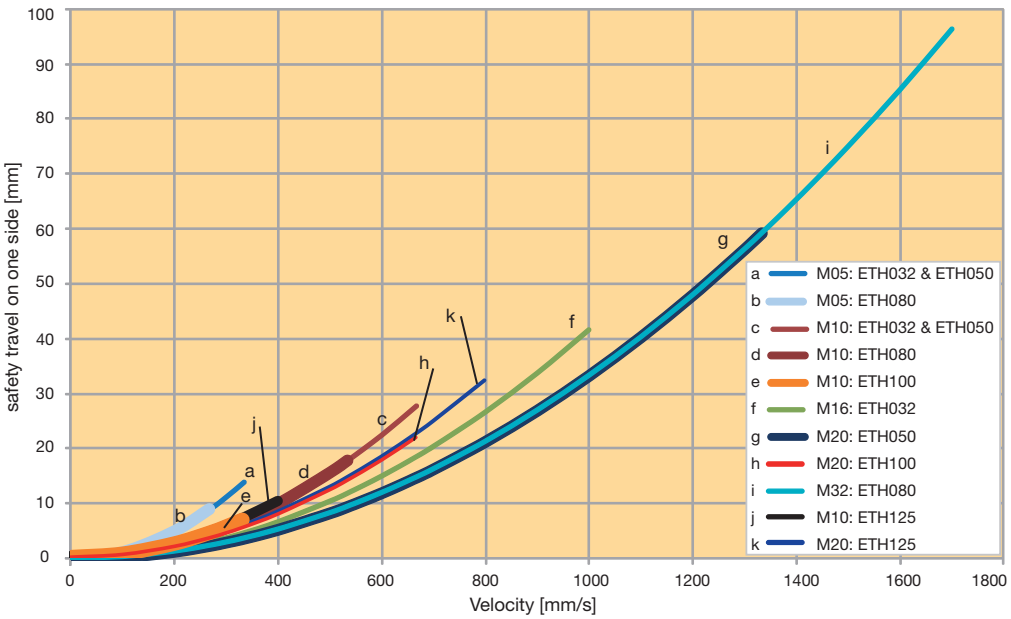
Usable stroke:

The usable stroke is the distance which you need to move in your application. It is always shorter than the stroke.

Safety travel (S1 & S2):

The safety travels are required to slow down the cylinder after it has passed a limit switch, Emergency stop in order to avoid contact with the mechanical limit stops.
Depending on the screw lead and the maximum speed, the following diagram recommends a minimum safety travel, which is sufficient for most applications according to experience.
With demanding applications (great masses and high dynamic), the safety travel has to be calculated and enlarged accordingly (dimensioning on demand).

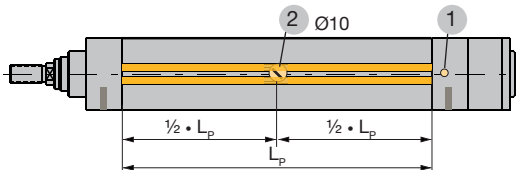
Diagram



Information: The safety travel taken from the diagram applies for one side. I.e. the diagram value must be multiplied by factor 2 in order to get the total safety travel. The diagram is based on the maximum screw acceleration / deceleration

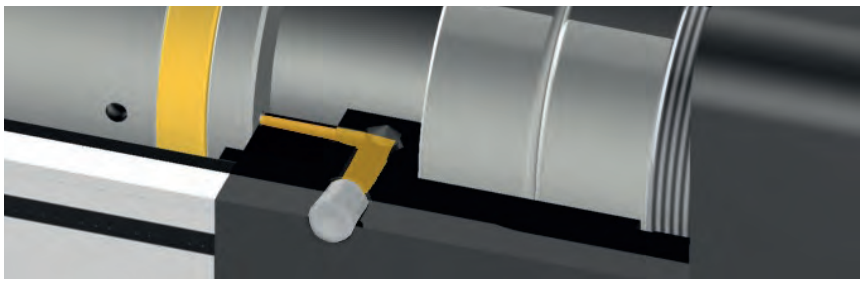
Relubrication

All frame sizes include a standard Easy lubrication port for lubricating the screw nut (designation "1" in the order code page 54).



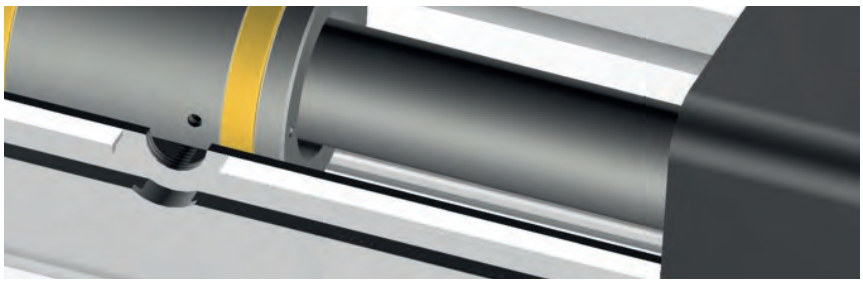
1: Central lubrication (standard)
2: Optional lubrication (possible on all 4 sides).
L_P: Length of profile

Option 1: Central lubrication (standard)



Relubrication is simple using the easy access port. Users simply perform a controlled retract of the cylinder approaching the end stop under slow speed and grease the cylinder. Central relubrification orientation is always envisaged in a 3 o'clock position.

Option 2...5: Middle lubrication via an opening in the profile



If a space constraint does not allow easy access to the standard lubrication port, other options are available.
Free access to this bore, even after integration of the cylinder into a system, can be ensured by choosing the corresponding profile orientation (see order code page 54). The bore is located in the middle of the aluminum profile.

With frame sizes ETH050 to ETH125 and a stroke less than 240 mm, the central positioning of the lubrication port in the profile is not possible. For more information see mounting instructions.

Motor and Gearbox Selection

Drive torque calculation

The torques to be produced by the motor result from the acceleration, the load and the friction torque. The drive torques must be calculated for all segments of the application cycle (represented by index "j")

Calculation of the **acceleration torque** with respect to the rotary moments of inertia:

$$M_{B,j} = \left(J_{i/p,0} + J_{i/p,Stroke} \bullet \text{Stroke} \right) \bullet \frac{1}{\eta_{ETH}} \bullet \frac{1}{i_G^2 \bullet \eta_G} + J_G + J_M \bullet 10^{-3} \bullet \frac{6.28 \bullet a_{K,j}}{P_h}$$

only with gearbox

Formula 5

The acceleration forces due to the translatory moved masses are taken into consideration in the calculation of the axial forces on (page 11).

The **load torques** result from the occurring axial forces:

$$M_{L,j} = \frac{F_{x,a\,/\,e,j}}{\text{Thrust force factor}} \bullet \frac{1}{i_G \bullet \eta_G}$$

only with gearbox

Formula 6

The motor must therefore generate the following drive torques:

$$M_{M,j} = M_{B,j} + M_{L,j}$$

Formula 7

The **effective torque** can be deduced from the drive torques for all segments of the application cycle (formula 7):

$$M_{eff} = \sqrt[2]{\frac{1}{t_{total}} \bullet \left(M_{M1}^2 \bullet t_1 + M_{M2}^2 \bullet t_2 + \ldots \right)}$$

Formula 8

Motor dimensioning

- The nominal torque of the motor must exceed the calculated effective torque (formula 8).
- The peak torque of the motor must exceed the maximum occurring drive torque (formula 7).

With the aid of the "motor mounting options" chart you can check if the respective motor is mechanically compatible to the corresponding electro cylinder.

Abbreviations used (formula 5-8)

$M_{B,j}$	= Variable acceleration torque in Nm
$J_{i/p,0}$	= Red. rot. mass moment of inertia at zero stroke for inline/parallel motor configuration in kgmm² see "Technical Data" page 8
$J_{i/p,\ Stroke}$	= Red. rot. mass moment of inertia per mm of stroke for inline/parallel motor configuration in kgmm² see "Technical Data" page 8
Stroke	= Selected stroke in mm
η_{ETH}	= Efficiency of the electro cylinder 0.9 (inline drive configuration) 0.81 (parallel motor)
i_G	= Gearbox ratio
η_G	= Efficiency of the gearbox (see gearbox manufacturer specifications)
J_M	= Motor mass moment of inertia in kgmm²/mm (see motor manufacturer specifications)
J_G	= Gearbox mass moment of inertia in kgmm²/mm (see gearbox manufacturer specifications)
$a_{K,j}$	= Acceleration at the cylinder rod in m/s²
P_h	= Screw pitch in mm
$M_{L,j}$	= Load torque in Nm
$F_{x,a/e,j}$	= Loads in x direction in N (see page 11
$M_{M,j}$	= Drive torque in Nm
M_{eff}	= Effective value - motor in Nm
t_{total}	= Total cycle time in s
t_j	= Amount of time in the cycle in s

Force constant: "Technical Characteristics" see page 8.
Index "j" for the individual segments of the application cycle

Mounting Methods

Please respect the notes in the ETH Manual (19x-550002) on the permissible screws and tightening torques.

Standard

Order code

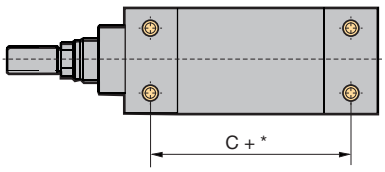
F

ETH032-ETH125

Example for parallel motor configuration

Mounting via thread on the cylinder front or end side with parallel motor configuration (ETH032-ETH125).
("Dimensions" see page 22)

ETH032-ETH080



Mounting with 4 mounting threads on the underside of the profile. (ETH032-ETH080).
("Dimensions" see page 22)

[1] SW: Width across flat (position of the flat is not fixed)

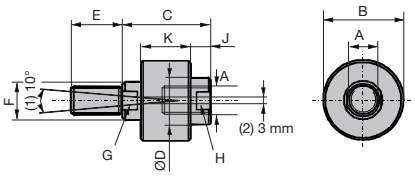
Alignment Coupler

Order code

L

For mounting at the extremity of the cylinder rod

- Balances misalignments
- Enlarges the mounting tolerance
- Simplifies the cylinder mounting
- Increases the service life of the cylinder guidings
- Compensates the offset between components and relieves the guiding from lateral force influences
- The traction/thrust force bearing capacity remains



(1): Angle offset
(2): Axial offset
E: Hole dimension for depth

	Part No.	Weight	A	B	C	ØD	E	F	G	H	J	K

Listed in the order code of the cylinder; the order number applies only for ordering spare parts. Prerequisite is a cylinder rod with external thread.
Only available in protection option A (IP54 with galvanized screws).
[1] Subsequent conversion from rod end can only be made in our factory.
[2] Attention: Thread M39x2 differs from the standard (M42x2).

Outrigger Bearing

Order code **R**

Order code **T** 2)

Function of outrigger bearing:

- Additional stability and precision
- Anti-rotation device for higher torques
- Absorption of lateral forces

Versions

Option R:
Outrigger bearing with ball bushings
(available only in protection class option A, "Order Code" see page 54)

- Main casting extruded aluminum
- 2 hardened steel guiding rods, surface hard-chrome plated
- Linear ball bearings

Option T: 2)
Outrigger bearing with slide bushings
(for all protection options, standard with options B & C, "Order Code" see page 54)

- Main casting extruded aluminum
- 2 guiding rods stainless steel
- Sliding guides

When sizing the drive train of an ETH electro cylinder with outrigger bearing and sliding bushings, increased friction losses in the sliding bushings must be taken into consideration

Note:
1) xxxx corresponds to the customized stroke. For information about this value please contact Parker.

+* = Measure + Length of desired stroke ("Dimensions" see page 22).

available for ETH032-ETH080.
For the ETH080, the standard pneumatic outrigger bearing modules cannot be used.

2) not for ATEX

Accessories

Force sensors - Spherical rod eye with integrated force sensor

Swivel heads are important construction components with respect to rotary, pivoting and tilting movements. Force measurements are more and more frequently required in applications.
The force transducers are suitable for direct mounting on the cylinder rod. They can, for example, be used to measure contact forces or overloads. Thanks to the thin film technology, the swivel head force transducers are very robust and reliable. An integrated amplifier emits an output signal of 4...20 mA.
The sensors correspond to the EN 61326 standard for electromagnetic compatibility (EMC) and are sized to pick up traction/ thrust forces.

Features

- Measuring range: Traction/thrust forces up to ±114 kN
- Thin film implants (instead of conventional bonded foil strain gauges)
- Corrosion resistant stainless steel version
- Integrated amplifier
- Small temperature drift
- Long term stability
- High shock and vibration resistance
- For dynamic or static measurements
- Good repeatability
- Simple mounting
- Also available in ATEX design [1) 2)]. Authorized for gas atmospheres zone 1 and zone 2.

II 2G Ex ib IIC T4

Connection of the force sensors to Compax3 with Option M21 is possible.

For ETH032-ETH080: Only possible with cylinder rod end "M" (external thread).
For ETH100, ETH125: Only possible with cylinder rod end "K".
A subsequent conversion from another rod end to M or K is generally **NOT** possible.

[1)] The ATEX approval of the force sensors is only met, if the sensor is operating with an ATEX authorized isolated switch amplifiers and an ATEX authorized cable.
[2)] Please refer to the installation and operating instructions in the supplied operating manual.

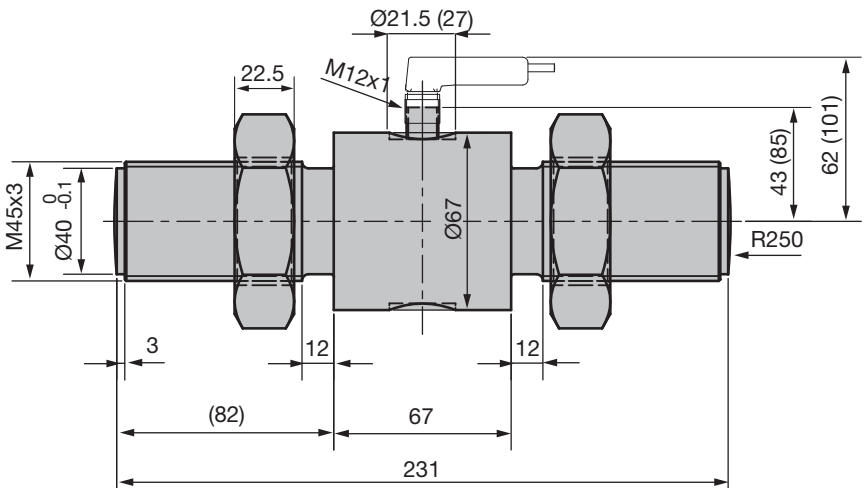
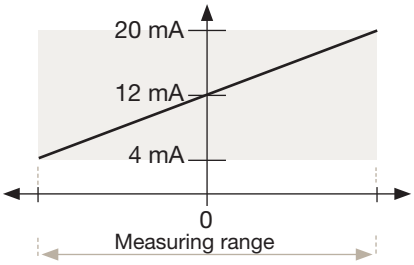
Version for ETH100 & ETH125

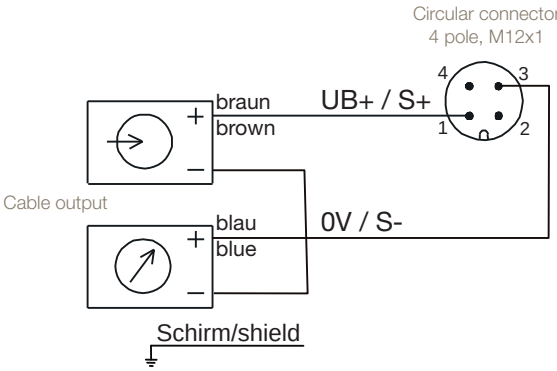


Dimensions [mm]

Electrical connection

Power supply UB = 10...30 VDC
Analog output 4...20 mA (two-wire technology)



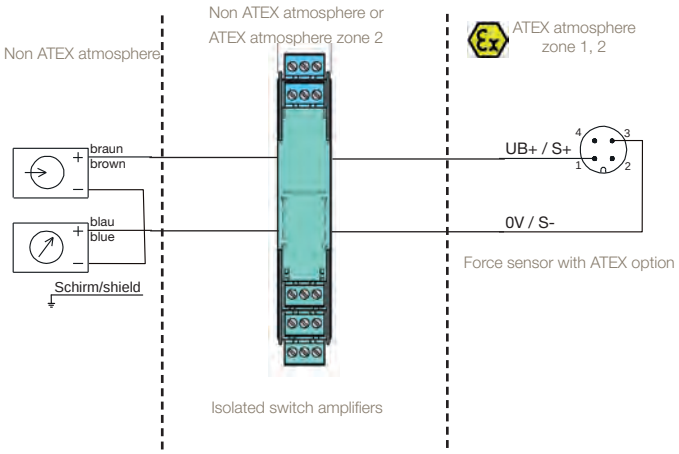


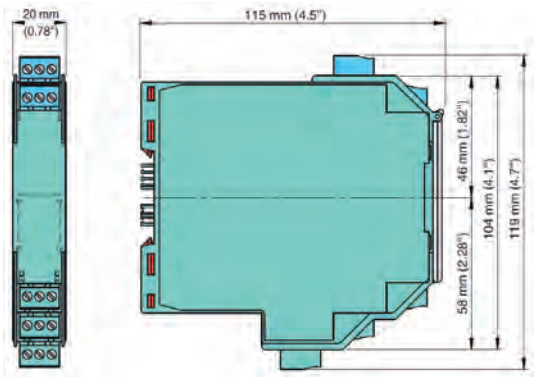
ATEX option

Technical data, isolated switch amplifiers [1) 2)]

Part No.	KFD2-STC4-Ex1
Technical Characteristics	"1-channel (Operation of 1 force sensor maximum), transmits the analogue measurement sign to the Non-EX-zone"
ATEX Classification	"II (1)GD [EEx ia] IIC [electrical circuit(s) in zone 0/1/2] II 3G EEx nA II T4 [device/installation site in zone 2]"
	The device is approved for safe circuits up to Ex-zone 0 (gas). Suitable for installation in zone 2
Supply voltage	20 … 35 V DC
Power consumption	1,9 W
Analog output	0/4 … 20 mA
Ambient temperature	-20°C … +60°C
Protection class	IP20

Dimensions, isolated switch amplifiers





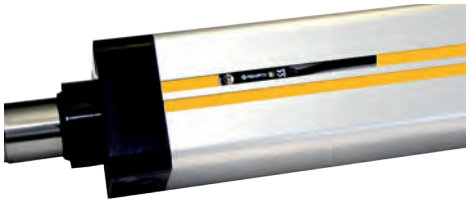
Part No.	Cable for force sensor
080-900446	Force sensor cable (PUR), straight connector, M12 with flying leads, 2 m
080-900447	Force sensor cable (PUR), straight connector, M12 with flying leads, 5 m
080-900456	Force sensor cable (PUR), angle connector, M12 with flying leads, 2 m
080-900457	Force sensor cable (PUR), angle connector, M12 with flying leads, 5 m
Part No.	**Cable for force sensor with ATEX design**
080-900464	Force sensor cable ATEX, straight plug, M12 flying leads, 5 m
080-900465	Force sensor cable ATEX, angle plug, M12 flying leads, 5 m

[1)] The ATEX approval of the force sensors is only met if the sensor is operating with an ATEX authorized isolated switch amplifiers and an ATEX authorized cable.
[2)] Please refer to the installation and operating instructions in the supplied manual.

Initiators / Limit Switches

Sensors for non-explosive atmospheres

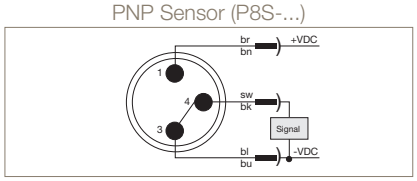
The position sensors can be mounted in the longitudinal grooves of the cylinder body and are flush to the body; eliminating protruding edges. The initiator cable is hidden under the yellow cover. The permanent magnet integrated into the screw nut actuates the initiators. Fitting sensors are available as optional accessories.



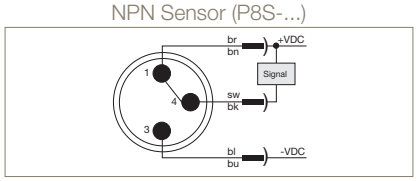
ETH032, ETH050 2 grooves each on 2 opposite sides.
ETH080, ETH100 2 grooves each on all sides.

The following initiator types are available for the ETH cylinder series:

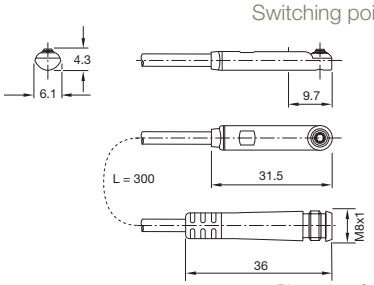
PNP Sensor (P8S-...)



NPN Sensor (P8S-...)



Switching point



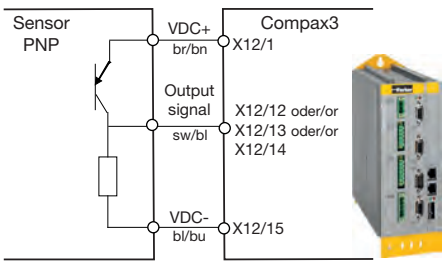
Dimensions [mm]

Info: Only use PNP types for ETH with Compax3.

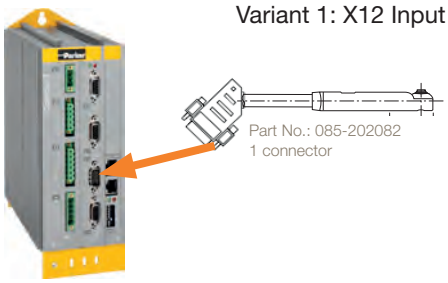
Magnetic cylinder sensors

Type	Function	LED	Logic	Cable	Continuous current	Current consumption	Supply voltage	Switching frequency	compatible with Compax3, SLVD-N, TPD-M
P8S-GPFLX	N.O.	yes	PNP	3 m	max. 100 mA	max. 10 mA	10-30 VDC	1 kHz	yes
P8S-GNFLX			NPN						No
P8S-GPSHX			PNP	0.3 m cable with M8 connector					yes
P8S-GNSHX			NPN						No
P8S-GQFLX	N.C.		PNP	3 m					yes
P8S-GMFLX			NPN						No
P8S-GQSHX			PNP	0.3 m cable with M8 connector					yes
P8S-GMSHX			NPN						No

ETH with Compax3

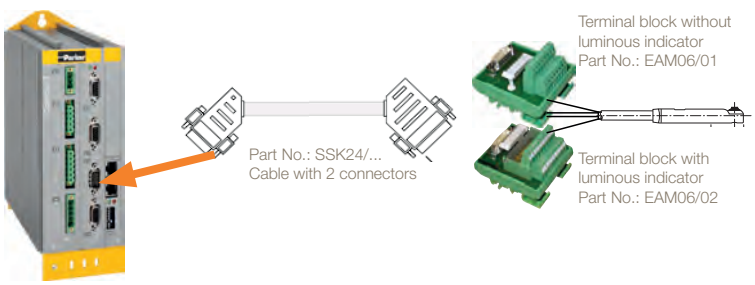


Variant 1: X12 Input - direct



Part No.: 085-202082
1 connector

Variant 2: X12 Input - via digital I/Os



Part No.: SSK24/...
Cable with 2 connectors

Terminal block without luminous indicator
Part No.: EAM06/01

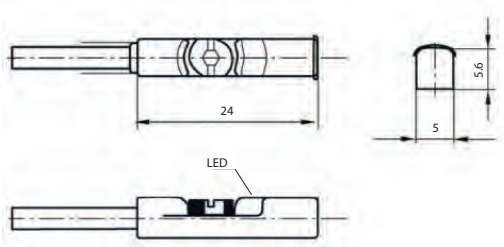
Terminal block with luminous indicator
Part No.: EAM06/02

Sensors for explosive atmospheres (ATEX) [1)]

In explosive atmospheres ATEX approved sensors must be used exclusively.
Parker magnetic cylinder sensors are rated as intrinsically safe electrical equipment. They must be used with isolated switch amplifiers with certificates of conformity for explosive atmospheres.
These sensors are not completely flush with the profile: the initiators protrude by about 1 mm.

Technical data

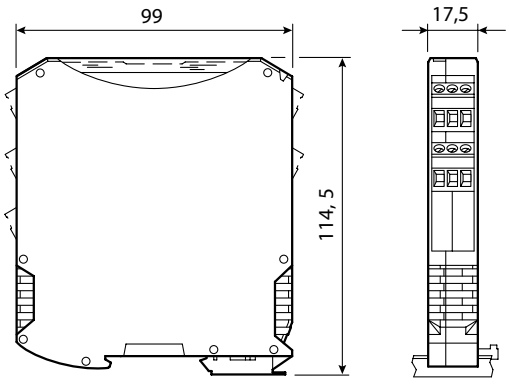
Order code	MZT8-2V8-N-KWB
ATEX Classification	"II 1G Ex ia IIC T4 II 1D Ex ia IIIC T135°C Da"
	Authorized for the operation in ATEX atmospere Zones 0, 1 and 2.
Supply voltage	max. 20 V
Short-circuit current	max. 60 mA
Output	max. 100 mA
Effective internal inductance	max. 30 µH
Effective internal capacitance	max. 130 nF
Ambient temperature	-25°C ... +80°C
Protection class	IP67
Cable	5 m
LED	yes



Dimensions [mm]

Technical data - Isolated switch amplifiers

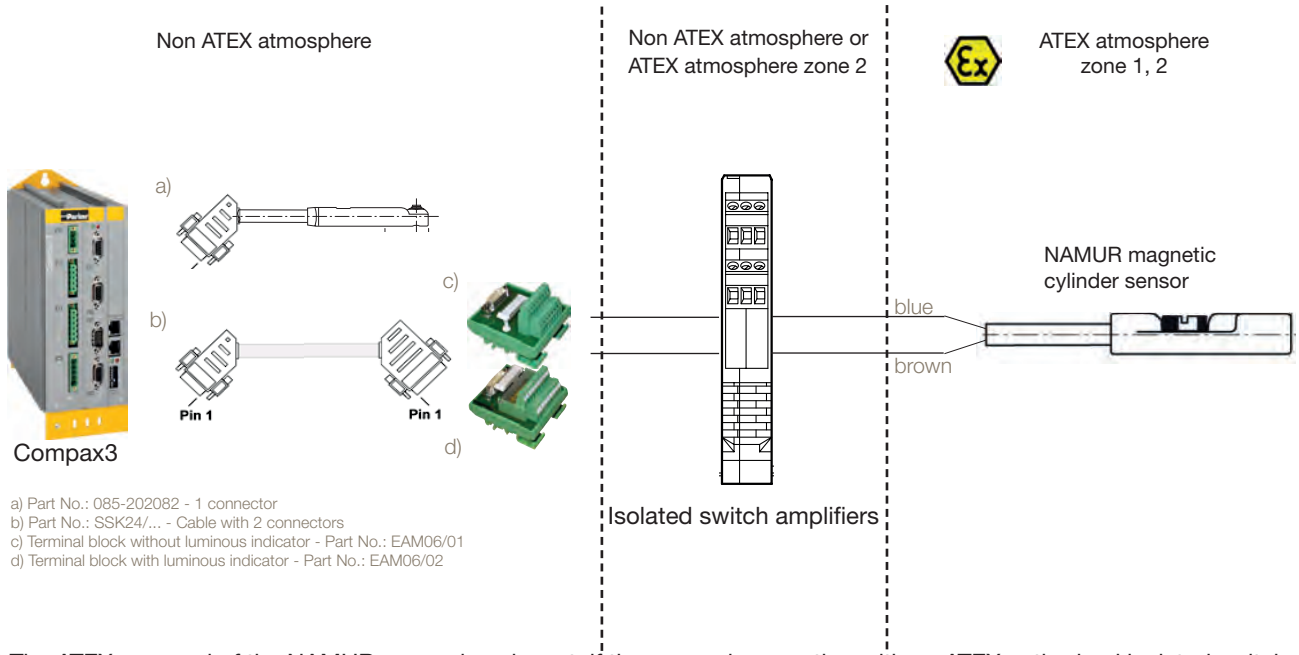
Order code	EN2-2EX1
Technical Characteristics	2-channel (operating with max 2 limit switches possible), Exchange-relay (NO / NC-behavior), Line fault detection
ATEX Classification	"II (1)G [Ex ia Ga] IIC II (1)D [Ex ia Da] IIIC II 3(1)G Ex nA nC [ia Ga] IIC t4 Gc X"
	The device is approved for intrinsically safe (Ex i) circuits up to Ex zone 0 (gas) and Ex zone 20 (dust).
Supply voltage ragen	24 V DC ... 230 V AC/DC
Current consumption	"42 mA (24V DC), < 80 mA (230 V AC/DC)"
Max. voltage OUTPUT	9,6 V
Max. current OUTPUT	10,3 mA
Max. power OUTPUT	25 mW
Non-load voltage	8 VDC +/-10%
Switching points	"> 2,1 mA (conducting) < 1,2 mA (blocking)"
Max. switching frequency	20 Hz
Ambient temperature	-20°C ... +60°C
Protection class	IP20



Dimensions [mm]

[1)] Please refer to the installation and operating instructions in the supplied manual.

ETH with Compax3*



a) Part No.: 085-202082 - 1 connector
b) Part No.: SSK24/... - Cable with 2 connectors
c) Terminal block without luminous indicator - Part No.: EAM06/01
d) Terminal block with luminous indicator - Part No.: EAM06/02

* The ATEX approval of the NAMUR sensor is only met, if the sensor is operating with an ATEX authorized isolated switch amplifiers.

Drive Train Selection [1)]

Example for Sizing with Predefined Drive Trains

In order to simplify the dimensioning process for a complete drive train, We have prepared an overview of predefined electro cylinders, gearboxes, motors and servo drives, which can be found on the following pages.
With a few parameters, you can directly find the order code for the required components.
Note the boundary conditions!

The following application parameters are required:

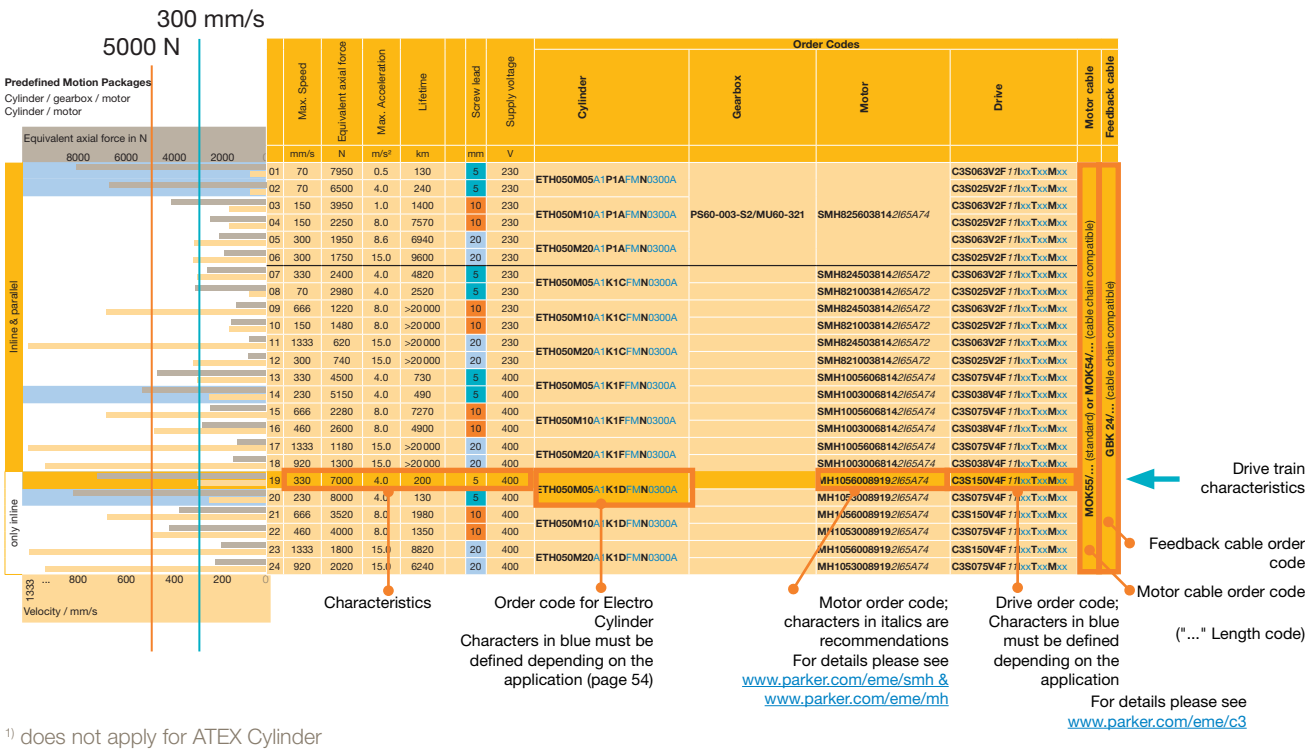
- The equivalent axial force.
  (Calculation page 13 formula 3 with the forces determined as described on page 11).
- The maximum speed.

Working with the drive train table

- Select the drive trains providing the required axial force (e.g. by drawing a vertical line).
- Then select from this choice the drive trains, that are able to travel at the required speed (e.g. by drawing a second vertical line).
- The suitable drive train can then be selected from the remaining choice, if necessary by comparing additional characteristics.

Please check if all given characteristics (such as max. acceleration, supply voltage etc.) are suitable for your application.

Example:
Required data
Equivalent axial force: 5000 N
Speed: 300 mm/s



[1)] does not apply for ATEX Cylinder

Predefined Motion Packages ETH032 [1)]

with Compax3, PSD1

In order to simplify the representation, we assumed boundary conditions which must be adhered to without exception in your application, otherwise the product combinations suggested here might not work. In this case, the application must be dimensioned conventionally.

[1)] does not apply for ATEX Cylinder

Basic Application Assumptions:

- Stroke from 50 to 400 mm
- Horizontal movement
- The characteristics of the individual components are not to be exceeded
  - with parallel motor: respect transmissible torque depending on the motor speed n
  - permissible axial thrust forces must be respected
  - Ambient conditions
  - ...
- Linear acceleration
- Maximum acceleration given = deceleration times
- Application factor = 1.0
- The calculation is based on the assumption: without standstill time (i.e. if there are standstill times in the application, only the power reserve is increased)
- 40 °C ambient temperature, with gearbox 20 °C ambient temperature
- up to 1000 m above sea level

23	139	14 500	7.7	160	10	400	

Basic Application Assumptions:

- Stroke from 50 to 800 mm
- Horizontal movement
- The characteristics of the individual components are not to be exceeded
  - with parallel motor: respect transmissible torque depending on the motor speed n
  - permissible axial thrust forces must be respected
  - Ambient conditions
  - ...
- Linear acceleration
- Maximum acceleration given = deceleration times
- Application factor = 1.0
- The calculation is based on the assumption: without standstill time (i.e. if there are standstill times in the application, only the power reserve is increased)
- 40 °C ambient temperature, with gearbox 20 °C ambient temperature
- up to 1000 m above sea level

Hint: The examples shown here are meant to help with the dimensioning process. As many parameters interact in this kind of drive package, the examples make no claim to be complete.

Predefined Motion Packages ETH100, ETH125 [1)]

with Compax3, PSD1

In order to simplify the representation, we assumed boundary conditions which must be adhered to without exception in your application, otherwise the product combinations suggested here might not work. In this case, the application must be dimensioned conventionally.

[1)] does not apply for ATEX Cylinder

	000	Standard ATEX Cylinder
	xxx	ATEX release xxx ATEX Applications-Identification No. xxx

1) ETH080-ETH125 features 2 grooves each on all 4 sides (i.e. Code B=A or D=C, F=E, H=G, K=J), therefore codes A, C, E, G, J are possible for ETH080-ETH125.
2) With parallel configuration, the motor may block access to the sensors and the lubrication port.
3) Relubrication options 2-5:
The standard lubrication port is without function.
With frame sizes ETH050 to ETH125 and a stroke less than 230 mm, the central positioning of the lubrication port in the profile is not possible. For more information see mounting instructions.
4) Please check cylinder motor/gearbox combination with the aid of the table ("Motor Mounting Options" see page 23).
5) Order Code SMH100-B5/14: " SMH100...ET... " (the motor shaft diameter is replaced by the term "ET") (not in the motors catalog) only with feedback: Resolver, A7
6) Not with motor mounting options A & B.
7) Not for thrust rod R, T
8) Not for ETH100, ETH125
9) Please observe the explanations "ETH - Electro Thrust Cylinder for ATEX Environment" see page 12

Software & Tools

- Actuator database
  - A special actuator database is available in the Compax3 ServoManager. You can simply enter the ETH type code for automatic controller parameterization.
- CAD-Configurator
  - Configure your electro cylinder CAD data online.
    www.parker.com/eme/eth
- Dimensioning tool "EL-Sizing"
  - A dimensioning tool simplifies the dimensioning process.

Parker's Motion & Control Technologies

At Parker, we're guided by a relentless drive to help our customers become more productive and achieve higher levels of profitability by engineering the best systems for their requirements. It means looking at customer applications from many angles to find new ways to create value. Whatever the motion and control technology need, Parker has the experience, breadth of product and global reach to consistently deliver. No company knows more about motion and control technology than Parker. For further info call 00800 27 27 5374

Aerospace

Key Markets

Aftermarket services
Commercial transports
Engines
General & business aviation
Helicopters
Launch vehicles
Military aircraft
Missiles
Power generation
Regional transports
Unmanned aerial vehicles

Key Products

Control systems & actuation products
Engine systems & components
Fluid conveyance systems & components
Fluid metering, delivery & atomization devices
Fuel systems & components
Fuel tank inerting systems
Hydraulic systems & components
Thermal management
Wheels & brakes

Climate Control

Key Markets

Agriculture
Air conditioning
Construction Machinery
Food & beverage
Industrial machinery
Life sciences
Oil & gas
Precision cooling
Process
Refrigeration
Transportation

Key Products

Accumulators
Advanced actuators
CO_2 controls
Electronic controllers
Filter driers
Hand shut-off valves
Heat exchangers
Hose & fittings
Pressure regulating valves
Refrigerant distributors
Safety relief valves
Smart pumps
Solenoid valves
Thermostatic expansion valves

Electromechanical

Key Markets

Aerospace
Factory automation
Life science & medical
Machine tools
Packaging machinery
Paper machinery
Plastics machinery & converting
Primary metals
Semiconductor & electronics
Textile
Wire & cable

Key Products

AC/DC drives & systems
Electric actuators, gantry robots & slides
Electrohydrostatic actuation systems
Electromechanical actuation systems
Human machine interface
Linear motors
Stepper motors, servo motors, drives & controls
Structural extrusions

Filtration

Key Markets

Aerospace
Food & beverage
Industrial plant & equipment
Life sciences
Marine
Mobile equipment
Oil & gas
Power generation & renewable energy
Process
Transportation
Water Purification

Key Products

Analytical gas generators
Compressed air filters & dryers
Engine air, coolant, fuel & oil filtration systems
Fluid condition monitoring systems
Hydraulic & lubrication filters
Hydrogen, nitrogen & zero air generators
Instrumentation filters
Membrane & fiber filters
Microfiltration
Sterile air filtration
Water desalination & purification filters & systems

Fluid & Gas Handling

Key Markets

Aerial lift
Agriculture
Bulk chemical handling
Construction machinery
Food & beverage
Fuel & gas delivery
Industrial machinery
Life sciences
Marine
Mining
Mobile
Oil & gas
Renewable energy
Transportation

Key Products

Check valves
Connectors for low pressure fluid conveyance
Deep sea umbilicals
Diagnostic equipment
Hose couplings
Industrial hose
Mooring systems & power cables
PTFE hose & tubing
Quick couplings
Rubber & thermoplastic hose
Tube fittings & adapters
Tubing & plastic fittings

Hydraulics

Key Markets

Aerial lift
Agriculture
Alternative energy
Construction machinery
Forestry
Industrial machinery
Machine tools
Marine
Material handling
Mining
Oil & gas
Power generation
Refuse vehicles
Renewable energy
Truck hydraulics
Turf equipment

Key Products

Accumulators
Cartridge valves
Electrohydraulic actuators
Human machine interfaces
Hybrid drives
Hydraulic cylinders
Hydraulic motors & pumps
Hydraulic systems
Hydraulic valves & controls
Hydrostatic steering
Integrated hydraulic circuits
Power take-offs
Power units
Rotary actuators
Sensors

Pneumatics

Key Markets

Aerospace
Conveyor & material handling
Factory automation
Life science & medical
Machine tools
Packaging machinery
Transportation & automotive

Key Products

Air preparation
Brass fittings & valves
Manifolds
Pneumatic accessories
Pneumatic actuators & grippers
Pneumatic valves & controls
Quick disconnects
Rotary actuators
Rubber & thermoplastic hose & couplings
Structural extrusions
Thermoplastic tubing & fittings
Vacuum generators, cups & sensors

Process Control

Key Markets

Alternative fuels
Biopharmaceuticals
Chemical & refining
Food & beverage
Marine & shipbuilding
Medical & dental
Microelectronics
Nuclear Power
Offshore oil exploration
Oil & gas
Pharmaceuticals
Power generation
Pulp & paper
Steel
Water/wastewater

Key Products

Analytical Instruments
Analytical sample conditioning products & systems
Chemical injection fittings & valves
Fluoropolymer chemical delivery fittings, valves & pumps
High purity gas delivery fittings, valves, regulators & digital flow controllers
Industrial mass flow meters/controllers
Permanent no-weld tube fittings
Precision industrial regulators & flow controllers
Process control double block & bleeds
Process control fittings, valves, regulators & manifold valves

Sealing & Shielding

Key Markets

Aerospace
Chemical processing
Consumer
Fluid power
General industrial
Information technology
Life sciences
Microelectronics
Military
Oil & gas
Power generation
Renewable energy
Telecommunications
Transportation

Key Products

Dynamic seals
Elastomeric o-rings
Electro-medical instrument design & assembly
EMI shielding
Extruded & precision-cut, fabricated elastomeric seals
High temperature metal seals
Homogeneous & inserted elastomeric shapes
Medical device fabrication & assembly
Metal & plastic retained composite seals
Shielded optical windows
Silicone tubing & extrusions
Thermal management
Vibration dampening
