INTRODUCTION

CONTRINEX

Contrinex Headquarters, Switzerland

Contrinex is a leading manufacturer of sensors for factory automation. The Swiss company, headquartered in Corminboeuf near Fribourg (CH), has a unique and innovative range of products whose features far surpass those of standard sensors.

Since its foundation in 1972 by Peter Heimlicher, Dipl Ing ETH, Contrinex has grown from a one-man operation to a multinational group with over 580 employees worldwide. More than 13 subsidiaries cover the core markets in Europe, Asia, North and South America.

AT A GLANCE

- Technology leading manufacturer of inductive and photoelectric sensors as well as safety and RFID systems
- World market leader for miniature sensors, sensors with long operating distances and devices for particularly demanding operating conditions (all-metal, high-pressure and high-temperature resistant sensors)
- Represented in over 60 countries worldwide, headquarters in Switzerland
- 8,000 products

Technology leader for sensor intelligence and industrial RFID

INTELLIGENT SENSORS FOR THE 4TH INDUSTRIAL REVOLUTION: INDUSTRY 4.0

Fit for the future with IO-Link

Intelligent sensors are the fundamental building blocks of modern smart factories. They enable sensor-supported production resources (machines, robots, etc.) to configure, control, manage and optimize themselves. Precise, reliable sensor data is now more essential than ever.

Sensors from Contrinex, the leader in intelligent sensor technology, ensure excellent data quality. To communicate that data, all Contrinex inductive and photoelectric ASIC sensors will be equipped with IO-Link as standard. Customers use either the sensor's binary PNP output or its intelligent IO-Link interface. Both are available in one and the same device. Another advantage is the fact that, with Contrinex sensors, there is no extra charge for IO-Link. This makes them not only quick and simple to install, but also highly economic.

As the first standardized IO technology worldwide (IEC 61131-9) for communication with sensors and actuators, IO-Link is crucial to the 4th Industrial Revolution. By installing Contrinex ASIC sensors with IO-Link, users can make themselves fit for the future.

CUSTOMIZATION

Contrinex has extensive experience in product customization and brand labelling. Over the years, a team of specialists has worked with clients to design, develop and manufacture numerous unique products that meet individual specifications. Custom solutions can range from a very simple adaptation such as a special connector or cable to a new design with special signals, technical characteristics or a customized housing. The company is also equipped to meet branding requirements for product color, packaging, labelling and logos.

Production sites are available worldwide, so products can be manufactured for best availability and in quantities that suit the client's requirements. Quality is assured by vigorous lab testing, pre-shipment inspections and compliance with market standards. All production sites are open to quality audits by clients.

LIVE SENSOR DATA FOR IoT

Data monitoring

Switching state is monitored continuously. This not only monitors the signal itself, but also the state at 80% of the switching distance. One can therefore ensure that the sensor is not working at the limit of its specifications.

✓ ✓ ✓ ✓

Diagnosis

The operating state of the sensor is checked. In case of open circuit, under-voltage, LC oscillator failure or installation of the wrong sensor, information is provided directly through IO-Link to enable fast repair, maintenance and replacement.

✓ ✓ ✓ ✓

Detection counter

Detection events are counted. By registering the number of detections, it is possible to calculate the speed or number of parts. The counter can be reset by means of a unique IO-Link message.

✓ ✓ ✓ ✓

Temperature

The internal temperature of the sensor is measured continuously, which provides an indication about the ambient temperature in the application. Moreover, the maximum temperature measured is saved for diagnosis and preventive maintenance purposes.

✓ ✓ ✓ ✓

Switching timer

The timing of output switching can be configured. Depending on the needs of an application, output switching can be delayed or the duration stretched through programming.

✓ ✓ ✓ ✓

NO/NC selection

The output switching mode can be selected as NO or NC. A single sensor type is configurable for the various needs of an application. This helps reduce the number of different sensor types required in stock.

✓ ✓ ✓ ✓

Sensitivity and teach

The sensitivity of the sensor can be adjusted remotely by changing the threshold. Alternatively, the teach function can be used to adapt the threshold to the application. Calibrated sensing ranges ensure easy sensor replacement by uploading the existing sensitivity to the replacement sensor.

✓ ✓ ✓ ✓

Light-ON/Dark-ON selection

The output switching mode can be selected as Light-ON or Dark-ON. A single sensor type is configurable for the various needs of an application. This helps reduce the number of different sensor types required in stock.

✓

Sensor mode

Three different modes are selectable depending on the application needs: "Normal", "Fast" and "Fine". "Normal" mode is a good balance of speed and precision. In "Fast" mode, speed is higher and in "Fine" mode precision is higher.

✓ ✓ ✓ ✓

Sequence selection

For cross-talk immunity with through-beam sensors, up to nine different emitting sequences can be selected to pair the emitter with the receiver.

✓

* Functionalities may vary depending on series and sensor type

SMART SENSORS

HIGHLIGHTS

- ✓ Multiple sensing modes in a single sensor:
 - ✓ Direct measurement: distance measurement, lateral position measurement (constant distance), feature detection
 - ✓ Indirect measurement: Angular measurement, lateral position measurement (inclined plane), force measurement, vibration measurement, step counting
- ✓ Exceptional versatility optimizes spares inventory
- ✓ Condition-based self-monitoring minimizes maintenance costs
- ✓ Localized D2D process logic enables sensor-based decision-making
- ✓ Unique embedded sensor ID eliminates installation errors
- ✓ IO-Link smart profile simplifies control-system integration
- ✓ Full-inox devices offer increased protection in the harshest environments
- ✓ Full-inox versions provide exceptional sensing range on aluminum, brass and copper targets

APPLICATION

Checking tool presence and position in a confined space

Modern CNC machining centers cope with ranges of materials, workpieces and cutting speeds that require different tool characteristics; spindles with automatic tool-changing are key to optimizing throughput. If a new tool fails to engage completely, damage to the tool, the workpiece or the spindle results. Smart Sensors from Contrinex, embedded in the body of the spindle, monitor the position of the tool during changes; any noncompliant measurements stop the process, triggering an alarm.

INDUSTRIES

Automation, packaging, robotics, automotive, green energy, environment, logistics, machine tools, electronic assembly, food and beverage, textiles, materials handling

Spindle-cutting machine tool

Metal recycling equipment

Conveyor systems

Robotics for pick-and-place

SMART SENSORS

MEASURE MONITOR CONFIGURE PREDICT

Contrinex **Smart Sensors**, designed with the needs of OEMs and system integrators in mind, have all the answers when it comes to reducing complexity and cost. By implementing multiple sensing modes in a single sensor, Contrinex has given designers the freedom they have always dreamed about, offering exceptional versatility and simplified integration.

KEY ADVANTAGES

✓ High-Resolution Measurement

✓ Direct Device-to-Device Communication

✓ User-Configurable Outputs

✓ User-Defined Memory

✓ Embedded Predictive-Maintenance Features

✓ Dual Channel

MULTI-MODE HIGH-RESOLUTION MEASUREMENT

- ✓ **Multiple sensing modes in a single sensor**

DIRECT AND INDIRECT MEASUREMENT

By adopting both direct and indirect measurement techniques, Contrinex has implemented multiple sensing modes in a single Smart Sensor. Depending on the user-defined mode of operation, measurements may be output as either process data (routine, cyclical parametric values) or event data (exceptions generated on the occurrence of a critical event).

Using the Smart Sensor's underlying capability for high-resolution distance measurement, direct measurements include axial distance (1) and lateral position (2). The sensor's exceptional sensitivity also allows it to detect non-uniform features (for example, holes) present in a target (4).

Other physical properties whose application can be translated into a displacement are also suitable for Smart Sensing. Non-contact examples include: continuous angular measurement using a cam mounted on a rotating shaft (3), lateral position measurements of larger targets using an inclined plane surface on the target (5), force measurement using a transfer element that deforms elastically (6), as well as vibration measurement (amplitude and frequency) in the axial direction (7).

Step counting – either linear or rotational (8) – is another proven application for Smart Sensors. The sensitivity of these devices allows them to replace traditional encoders, which are often bulkier and more costly.

1. Distance measurement

2. Lateral position measurement (constant distance)

3. Angular measurement

4. Feature detection

5. Lateral position measurement (inclined plane)

6. Force measurement

7. Vibration measurement

8. Step counting

USER CONFIGURABLE OUTPUTS

✓ **Exceptional versatility optimizes spares inventory**

SWITCHING SIGNAL CHANNELS (SSC)

The Smart Sensor's internal signals are referred to as Switching Signal Channels (SSC); the external input and output signals that result from an SSC are designated Output Switching Signals (OSS). By default, a Smart Sensor has a single-point threshold SSC enabled on Pin 4 (OSS1) of its connector, which operates in either IO-Link mode or Standard-IO (SIO) mode. On power-up, a Smart Sensor defaults to SIO mode; once the sensor is connected to an IO-Link master, a "wake-up" pulse from the master switches it to IO-Link mode. Thereafter, bidirectional communication operates between the master and the sensor.

PIN ASSIGNMENT

A second SSC may optionally be configured on Pin 2 (OSS2) of the Smart Sensor connector. If enabled, SSC2 operates solely in SIO mode and may be designated as an input or an output channel. The presence of a second IO channel gives integrators access to powerful additional features of the Smart Sensor, including Device-to-Device communication, Teach functions and Built-in Test functions.

DYNAMIC SWITCHING LOGIC

When specifying Contrinex Smart Sensors, designers assign their chosen switching logic to any of the available sensing modes – either as a one-time choice at the time of installation, or dynamically as the equipment operating sequence dictates. A single sensor provides all the options needed to monitor multiple parameters, with the flexibility to make real-time changes over IO-Link or via the built-in Teach function.

SINGLE-POINT MODE

With single-point mode selected, Smart Sensors behave as conventional two-state devices. The default logic (which may be inverted if the application requires it) sets the switching signal to "high" (SSC ON), if a threshold level or setpoint (target sensing distance, for example) has been reached. Either side of the switching point, the signal simply switches between "high" and "low" accordingly.

SMART SENSORS SMART FEATURES

WINDOW MODE

Window mode allows designers to monitor a range of values, which may be defined by two discrete switching setpoints. As the example shows, the default logic sets the switching signal to “high” (SSC ON) if the measured value lies between the two setpoints. In all other cases, once the measured value moves outside the defined range, the switching signal is set to “low”.

TWO-POINT (HYSTERESIS) MODE

Two-point (hysteresis) mode showcases the Smart Sensor’s ability to respond to setpoints or threshold values that trigger a change in the SSC only when the measured value is moving in a specified direction (rising or falling). In the example shown, as the measured value falls and passes SP1, the SSC remains set to “low” (SSC OFF). Only when the measured value reaches SP2 is the SSC set to “high”. As the measured value rises again, passing SP2 has no effect on the SSC, which is only set to “low” once the measured value reaches SP1 again.

TIMING MODES

Modifying the timing of a change in the SSC allows designers to nullify the effect of common process events that give rise to false triggers. Such events include (i) momentary changes in measurement value for non-process-related reasons and (ii) momentary loss of signal for known reasons.

DELAY

Introducing a specified delay before changing the status of the OSS in either direction prevents the sensor responding to a short-duration change in measurement value for reasons that include localized variability in the environment. Adopting a switching delay also helps prevent signal “bounce”, where the transition from one state to another may not be clearly defined. Delay may optionally be combined with stretch (see below).

STRETCH

Stretching the OSS pulse ensures that the signal has a minimum duration – often desirable for control purposes or to compensate for a measurement value that varies non-linearly over time. For example, communication with a “slow” PLC may require a minimum-duration pulse to ensure proper synchronization. Similarly, in the absence of a minimum-duration pulse, a measurement value that is not clearly defined during the transition from one state to another might otherwise give rise to multiple false triggers.

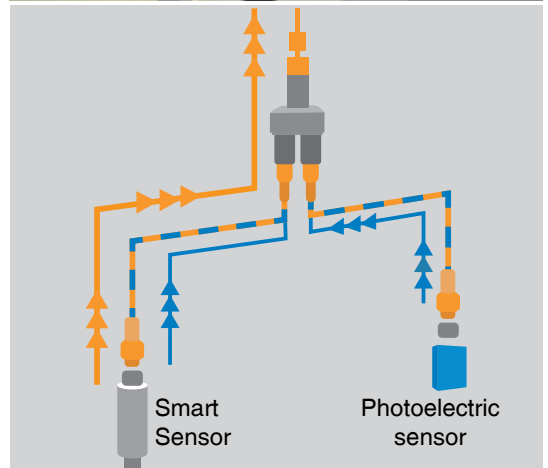

ONE-SHOT MODE

Smart Sensors also have the capability to generate a “one-shot” pulse on either the leading edge or the trailing edge of a change in the measurement value. One-shot pulses, also known as “differential up” and “differential down” may be required for secondary control functions that are implemented in a connected PLC.

DIRECT DEVICE-TO-DEVICE COMMUNICATION

✓ Localized D2D process logic enables sensor-based decision-making

BOOLEAN LOGIC

Designating a second SSC as an input channel allows designers to implement Boolean logic by combining an internal switching signal of the Smart Sensor (SSC1) together with that of a second two-state sensor (OSS2) operating in SIO mode. In the example shown, the Smart Sensor monitors the presence of an aluminum-foil closure on a bottle, while the secondary photoelectric sensor checks the fill level.

BOOLEAN AND (sensor enable/disable on pin 2)

BOOLEAN "AND"

Operating in Boolean "AND" mode, the signal from the secondary sensor is used to enable or disable the Smart Sensor, resulting in the Smart Sensor output (OSS1) being set to "high" only when both sensors are triggered. The output signal on OSS1 is delayed by two microseconds.

BOOLEAN OR (sensor bypass on pin 2)

BOOLEAN "OR"

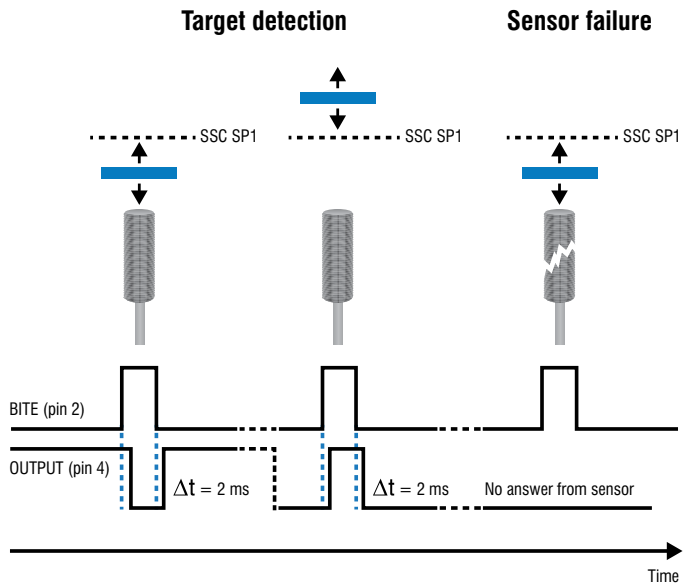

Alternatively, when a Boolean "OR" function is required, a "high" signal from the secondary sensor is set to bypass the Smart Sensor signal, overwriting the SSC1 output. The Smart Sensor otherwise continues to operate normally, and consequently, its output (OSS1) is set to "high" when either sensor is triggered. Again, a two-microsecond delay is introduced.

BUILT-IN TEST (BITE) FUNCTION

The SSC2 input channel serves an additional purpose when a self-test function is required. A BITE signal on SSC2 from a connected PLC or microcontroller is used (i) to determine whether the Smart Sensor is functioning correctly and (ii) to establish the presence or absence of a target.

A BITE handshake pulse returned by the sensor confirms its working state, while the polarity of the pulse indicates the presence or absence of a target. Failure by the sensor to return a handshake pulse signifies a defective device.

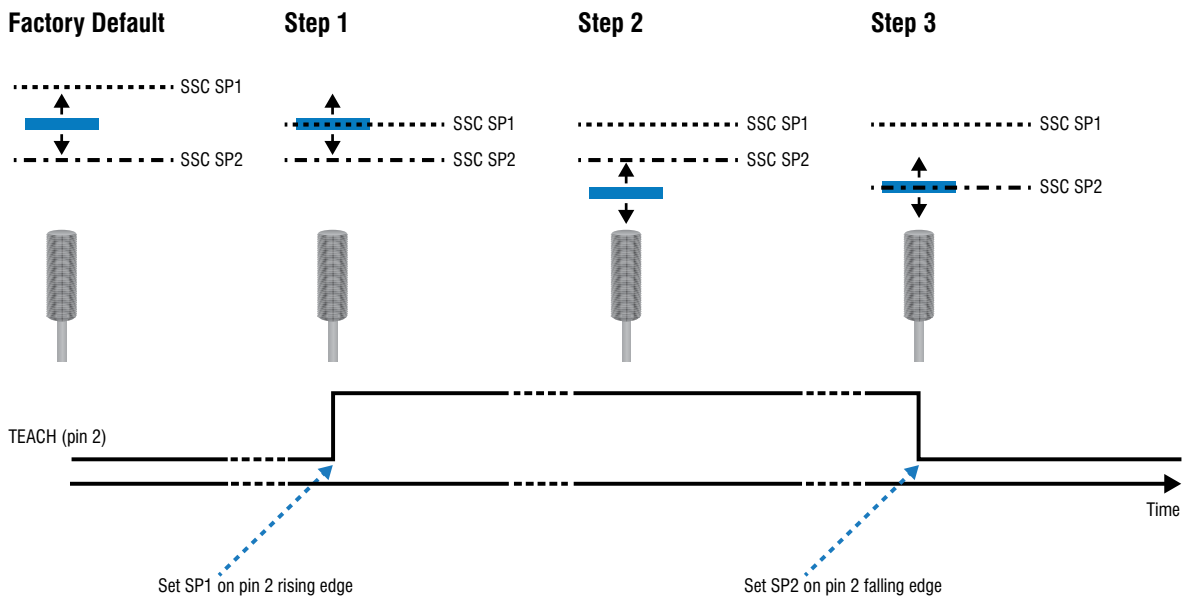

BOOLEAN XOR (BITE function on pin 2)

TEACH FUNCTION

Teaching the sensor externally to recognize one or more setpoints is another D2D function. Smart Sensors are supplied with default (factory-set) values for SP1 and SP2; during commissioning, engineers use either a locally connected teach device or a remote PLC to communicate with the Smart Sensor via OSS2.

EXTERNAL TEACH (high/low signal on pin 2)

Positioning the target at the first setpoint and triggering the teach pulse sets SP1 on the rising edge of the pulse. Repositioning the target to the second setpoint and removing the teach pulse then sets SP2 on the falling edge of the pulse.

DUAL CHANNEL

- ✓ **IO-Link smart profile simplifies control-system integration**
- ✓ **High-speed sensor-based decision-making using SIO**

LOCALIZED HIGH-SPEED CONTROL

Enabling OSS2 on Pin 2 of the Smart Sensor connector gives system integrators access to localized high-speed control options; as already noted, OSS2 operates solely in SIO mode and may be designated as an input or an output channel. In addition to D2D communication, two specific advantages stand out.

REPORTING TIME-CRITICAL EVENTS

Should a remote sensor identify an out-of-range parameter that requires immediate intervention, (for example, overheating), an event-based output signal is generated to notify the central control system – in the example shown, a PLC – that a system-wide shut-down is essential. In this instance, the IO-Link output (OSS1) may not respond quickly enough to prevent the problem escalating.

Using the SIO output on OSS2, the sensor delivers a high-speed notification directly to the PLC, bypassing the IO-Link channel and initiating the shut-down sequence immediately. The Smart Sensor’s dual-channel capability ensures that further, costly damage is avoided and that subsequent process down-time is minimized.

DECENTRALIZED CONTROL

Smart Sensors are also ideally suited to non-critical, decentralized process tasks under local control. In the example shown, a local SIO input signal on OSS2 enables or inhibits the operation of the sensor without the need to route the command via the PLC. This configuration consumes little or no system-wide resource, requiring only a confirmatory IO-Link signal on OSS1 to update the sensor status in due course.

With OSS2 signal alternatively configured in output mode, the Smart Sensor may, for example, control the operation of a local sub-system, again without the need to route the command via the PLC. Using the signal to switch a simple two-state device allows the sensor to control the operation of any associated non-intelligent equipment, for example an actuator or an electrical circuit.

PREDICTIVE MAINTENANCE FEATURES

- ✓ **Condition-based self-monitoring minimizes maintenance costs**
- ✓ **Plug-and-play sensor replacement**

SAVING TIME BY DESIGN

In a fast-moving process-manufacturing environment, down-time is a major cost factor. While some interruptions to production are inevitable, minimizing lost time is a priority, and Smart Sensors offer big benefits here, saving time by design.

PLUG-AND-PLAY REPLACEMENT

Once initial commissioning is completed, each sensor's configuration is stored automatically on the local IO-Link Master; this allows plug-and-play replacement of sensors should the need arise, without any loss of functionality and without any need for recalibration. Down-time and the associated maintenance cost is kept to a minimum.

CYCLICAL AND EVENT-BASED REPORTING

The Smart Sensor's predictive-maintenance capabilities rely on its ability to collect both process data and event data, as well as making use of its on-board cumulative-data stores. Not only can maintenance engineers monitor long-term equipment behavior, they also have confidence in the sensor's ability to flag any one-off threshold exceptions that require attention.

THRESHOLD EXCEPTIONS

The sensor's records cumulative data for distance, cycle count and temperature, with alarm thresholds set for each. Cumulative cycle-count limits for the expected life of the equipment being monitored are programmed into the sensor, and a threshold alarm is triggered when the set value is exceeded, typically via IO-Link, although a high-speed SIO output may be used instead.

In the case of distance and temperature, a single, ultimate limit for each parameter is set, and any measurement that exceeds either limit is sufficient to trigger an alarm; in this instance, a high-speed SIO signal is almost certainly the preferred option. Cumulative temperature measurements may also trigger a parametric-shift alarm, as explained below.

Distance

Counter

Temperature

PARAMETRIC SHIFT

Stored measurements from a prolonged period of operation provide maintenance engineers with a pattern of data over time; typically, the data will form a normal distribution centered around the expected mean value for the parameter in question. Examples include, but are not limited to, equipment temperature (as above) and amplitude of vibrations.

The comprehensive data patterns allow engineers to recognize any parametric shifts that occur over time. These may include a shift in the mean value, where, for example, a sustained rise in temperature occurs at a level that isn't high enough to trigger a threshold alarm. Alternatively, an increase in the standard deviation of measurements, for example, when vibrations become unstable, may result. In either case, a parametric-shift alarm is triggered, allowing engineers to take remedial action.

USER-DEFINED MEMORY

- ✓ **Unique embedded sensor ID eliminates installation errors**

EMBRACING THE INTERNET OF THINGS

The advent of the Internet of Things (IoT) has changed the way engineers look at integrated processes in manufacturing and logistics. No longer do system designers consider production lines and distribution centers to be made up of discrete components – conveyors, actuators, motors, sensors, controllers and other similar hardware – but instead they consider more complex Functional Units.

Working with a functional unit, the need to identify individual components remains as important as ever; installing the wrong sensor could have far-reaching consequences. Contrinex Smart Sensors make it simple to get the right device in the right place, eliminating errors and avoiding costly interventions.

CUSTOMIZED SENSOR-DATA TAGS

Within each Smart Sensor, three read-write data tags are reserved for user-defined information. Designated the function tag, the location tag and the application-specific tag, respectively, they link individual sensors to specific applications or tasks, allowing process engineers to locate a discrete device quickly and easily. This simplifies installation and maintenance when more than one sensor is used in a single functional unit.

TAG NAME	SIZE [BYTE]	EXAMPLES
Function Tag	32	"Drive", "Feed", "Forward"
Location Tag	32	"AQ3.1", "S45-2"
Application-Specific Tag	32	"end of motion", "piston #1", "fwd stroke"

SMART SENSORS SMART TASKS

PNEUMATICS

MULTI-MODE MEASUREMENT OF PISTON DISPLACEMENT AND SPEED

Industrial equipment designers continually seek ways to reduce cycle times without compromising safety or increasing cost, and require a monitoring capability for pneumatic cylinders that identifies deviations from the optimal deceleration profile without increasing complexity or cost. Rugged, multi-mode Smart Sensors from Contrinex, embedded in each cylinder, identify adverse trends in the deceleration profile, providing a cost-effective, unobtrusive fit-and-forget solution.

SMART TASKS

- High-resolution measurement of lateral piston displacement
- Repeated high-speed displacement measurement at timed intervals

- Monitor temperature, vibration and process cycle count for maintenance purposes
- Local storage of sensor configurations, allowing plug-and-play replacement when needed

- Generation of velocity gradient using on-board cumulative data store

- High-speed communication with central control system for time-critical events

CUSTOMER BENEFITS

- ✓ Embeddable inductive Smart Sensors offer multiple sensing modes in a single device, eliminating increased complexity and cost
- ✓ One-shot timer feature allows process engineers to identify deviations from the optimal deceleration profile, minimizing maintenance expense
- ✓ Dual-channel capability enables a local alarm to be triggered by an event-based exception, avoiding a plant-wide shut-down
- ✓ Industry-standard IO-Link connectivity provides a single interface to the machine control system
- ✓ Cumulative operating data for predictive maintenance, including temperature and operating-cycle count, is recorded in on-board data storage
- ✓ Sensor configurations are stored locally, allowing plug-and-play replacement of sensors when needed
- ✓ Proven technology ensures highly reliable fit-and-forget operation with no manual intervention

LINEAR GUIDE

PERFECT LOCATION AND POSITIONING OF LINEAR STAGE

Automation engineers designing high-speed assembly equipment with multiple linear transfers between workstations need to maximize speed and accuracy while keeping cost down. They require a single-sensor positional-control solution that delivers a high-speed approach to the critical areas and a slower, high-precision final positioning. An inductive Smart Sensor from Contrinex with IO-Link connectivity and multiple user-configurable outputs performs both the required tasks in a highly cost-effective manner.

SMART TASKS

- Reliable position sensing on high-speed approach
- High-accuracy lateral position measurement during final stage positioning

- User-configured setpoints ensure precise window-mode positioning

- IO-Link smart profile simplifies control-system integration

- Sensor configuration is backed-up automatically on the local IO-Link Master

- Unique embedded sensor ID eliminates installation errors

CUSTOMER BENEFITS

- ✓ Rugged inductive Smart Sensors ensure accurate positioning of linear stages without compromising operational speed
- ✓ Single-sensor positional-control system is non-complex and highly affordable
- ✓ Compact embeddable M12 sensors fit unobtrusively and easily into off-the-shelf linear guide rails
- ✓ Industry-standard IO-Link connectivity provides a single interface to the machine control system
- ✓ Sensor configurations are stored locally, allowing plug-and-play replacement of sensors when needed
- ✓ Proven technology ensures highly reliable fit-and-forget operation with no manual intervention

SMART SENSORS SMART TASKS

SPINDLE

CHECKING TOOL PRESENCE AND POSITION IN A CONFINED SPACE

Modern CNC machining centers cope with ranges of materials, workpieces and cutting speeds that require different tool characteristics; spindles with automatic tool-changing are key to optimizing throughput. If a new tool fails to engage completely, damage to the tool, the workpiece or the spindle results. Smart Sensors from Contrinex, embedded in the body of the spindle, monitor the position of the tool during changes; any noncompliant measurements stop the process, triggering an alarm.

SMART TASKS

- Precision real-time measurement of drawbar position

- User-configured setpoints ensure accurate end-of-travel position sensing

- High-speed notification of time-critical events

- Threshold alarms identify over-temperature and end of service life
- Sensor configuration is backed-up automatically on the local IO-Link Master

- Self-test function guards against sensor failure

CUSTOMER BENEFITS

- ✓ Embeddable inductive Smart Sensor monitors drawbar position, detecting incomplete tool engagement and inhibiting further motion before damage occurs
- ✓ Single-sensor positional-control system is non-complex and highly affordable
- ✓ Embeddable M12 sensor fits snugly in the limited space available
- ✓ Industry-standard IO-Link connectivity provides a single interface to the machine control system
- ✓ Cumulative operating data for predictive maintenance, including temperature and operating-cycle count, is recorded in on-board data storage
- ✓ Sensor configurations are stored locally, allowing plug-and-play replacement of sensors when needed
- ✓ Proven technology ensures highly reliable fit-and-forget operation with no manual intervention

RECYCLING

RELIABLE DETECTION OF DIFFERENT METALLIC MATERIALS

The global recycling industry continually seeks to reduce the cost of sorting and separating mixed-metal scrap. With the introduction of induction sorting, designers require sensors that operate accurately and at high speed to identify and separate fast-moving streams of ferrous and non-ferrous material in a single pass. Rugged inductive Smart Sensors from Contrinex, embedded immediately below the delivery belt, provide continuous high-speed detection across the full width of a conveyor.

SMART TASKS

- Multi-mode target recognition at constant target distance
- Unique embedded sensor ID eliminates installation error
- High-speed localized communication with air-knife actuators
- Cumulative cycle/target counting in each of two modes
 - Threshold alarms identify over-temperature and end of service life
 - Sensor configuration is backed-up automatically on the local IO-Link Master

CUSTOMER BENEFITS

- ✓ Embeddable inductive Smart Sensors detect ferrous and non-ferrous metal and trigger separation accurately and reliably
- ✓ A single array of sensors provides continuous detection across the full width of a conveyor
- ✓ Smart Sensors are easily able to identify material on fast-moving conveyors
- ✓ Industry-standard IO-Link connectivity provides a single interface to the machine control system
- ✓ Cumulative operating data for predictive maintenance, including temperature and operating-cycle count, is recorded in on-board data storage
- ✓ Sensor configurations are stored locally, allowing plug-and-play replacement of sensors when needed
- ✓ Proven technology ensures highly reliable fit-and-forget operation with no manual intervention

INDUCTIVE SENSORS

HIGHLIGHTS

- ✓ Smallest self-contained miniature inductive sensors with  IO-Link on the market
- ✓ Practically indestructible Full Inox sensors for extreme conditions
- ✓ Weld-Immune Full Inox sensors, M8, M12, M18, M30, C23
- ✓ Full Inox sensors with Factor 1 on steel and aluminum
- ✓ Sensors with 4× standard operating distance
- ✓ Outstandingly durable sensors for high cyclic pressures (peak: 1000 bar / 14510 psi)
- ✓ Highly accurate analog output sensors for distance control
- ✓ Sensors to withstand high temperatures (up to 230°C / 446°F)
- ✓ Ecolab-approved sensors

NEW

- ✓ Full Inox Chip-Immune sensors for machining environments

INTRODUCTION

TECHNOLOGY

Contrinex inductive devices work according to one of three different technologies. All involve the generation of an alternating magnetic field that emerges at the sensing face. The presence of a conductive, generally metallic, object influences this field in a way that can be detected and evaluated by built-in electronics. All Contrinex ASIC sensors are IO-Link enabled in PNP NO versions.

TECHNOLOGY FAMILIES

CLASSICS FAMILY

Conventional technology, engineered by Contrinex

The **Classics** family uses conventional inductive sensor technology, but with the benefit of a Contrinex ASIC (application specific integrated circuit). ASIC technology ensures reliability, stability and ease of commissioning, due to low variation. Sensors in this family achieve operating distances up to 2× the industry standard. All ASIC sensors in the **Classics** family are IO-Link enabled in PNP NO versions.

Classics sensors have a conventional oscillator and coil generating a high-frequency magnetic field that emerges at the sensing face. Any metallic object found in this field absorbs some of the energy, which is in turn detected and evaluated by built-in electronics (Fig. 1).

Fig. 1: Conventional inductive sensor technology, as used in the Classics family

Ferromagnetic metals (steel, nickel, cobalt) absorb the most energy. The achievable operating distances are therefore greatest with these metals. Non-ferromagnetic metals, such as aluminum, absorb less energy. As a result, operating distances are lower (approx. 25... 45% of those on steel).

The **Classics** technology family (series 600) includes devices from the ranges **Basic**, **Miniature**, **Extra Pressure**, **Extra Temperature**, **High Temperature**, **Washdown** and **2-Wire**.

EXTRA DISTANCE FAMILY

Increased stability for exceptionally long operating distance

The **Extra Distance** family is based on the **Condist®** oscillator developed by Contrinex. Sensors benefit from **up to 4× the standard** operating distance, keeping them out of harm's way in rugged, industrial environments. Sensor lifetime is therefore increased.

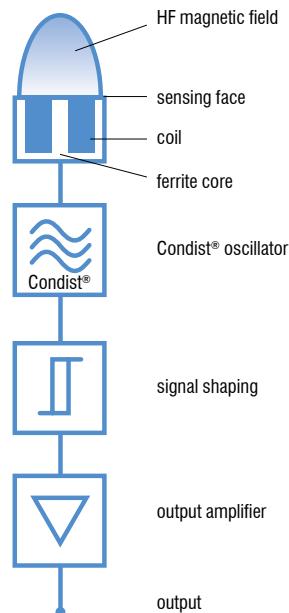

Fig. 2: Contrinex's Condist® inductive sensor technology, as used in the Extra Distance family

Like **Classics** family sensors, these also generate a high-frequency magnetic field that emerges at the sensing face (Fig. 2). Again, the resulting effect is that any metallic object entering the field absorbs energy from it.

However, the oscillator and the subsequent signal evaluation circuit are completely different, with the objective of achieving a significantly **better stability** with respect to environmental influences, in particular temperature. The most important contribution to this comes from the Contrinex **Condist®** oscillator.

Improved stability permits the switch point to be further away, leading to **long operating distances** on ferromagnetic metals (Fig. 3). Sensors with this technology also react particularly well to **narrow targets**, e.g. small screws, wires and foils.

Fig. 3: Extra Distance family sensors have a longer operating distance, due to Condist® oscillator technology

Apart from the **Condist®** oscillator, all other assemblies are equivalent to the **Classics** family. Material

dependencies and other properties are also the same as for **Classics** family sensors.

Special attention has been paid to **meet the relevant standards as much as possible**, so that easy **interchangeability** with conventional devices is guaranteed. Great emphasis has been placed on very good EMC resistance and on perfect sealing against liquid penetration.

The **Extra Distance** technology family includes devices from the **Basic, Miniature, Extra Pressure, High Pressure** and **Analog Output** ranges. This technology is used in series 500 devices.

All-round stainless steel protection – practically indestructible

The **Full Inox** family is based on Contrinex's Condet® technology. These one-piece stainless steel sensors are not only the most durable on the market, they also offer long operating distances on any conductive metal.

Full Inox sensors also function according to inductive technology. However, the coil which generates

the magnetic field is not part of the oscillator (Fig. 4). Instead, the field is generated by periodic, short transmitter current pulses, which flow through the coil (Fig. 5). This field induces a voltage in the target which, in turn, generates a current flow in it. When the **transmitter current pulse** is switched off, the current in the object dies away, causing a **voltage to be induced** in the transmitting coil (Fig. 6).

This voltage generates the signal required, and is in principle **independent of the field's energy loss**. Therein lies the fundamental advantage of this technology, since the field energy losses, which are evaluated in conventional sensors, are subject to a number of undesirable environmental and material influences. Condet® technology allows the sensor, including its face, to be fully encapsulated in a protective, stainless steel housing, with the added security of long operating distances.

The coupling between the target and the coil is rather **like a transformer**, and is hence **temperature independent** and only **slightly influenced**

by the target's material. Operating distances are therefore identical on steel and aluminum. Only metals which are non-ferromagnetic and also have poor electrical conductivity give a reduced usable signal.

The **Full Inox** family includes devices from the **Basic, Miniature, Extreme, High Pressure, Wash-down, Weld-Immune, Chip-Immune, Maritime** and **Double-Sheet** ranges.

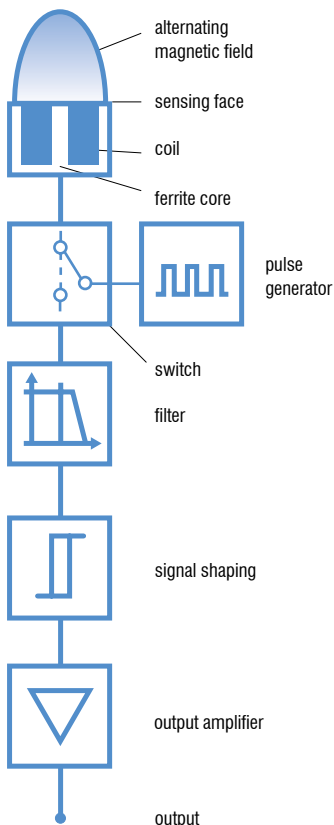

Fig. 4: Full Inox family sensors use Condet® pulse generator technology instead of an oscillator

INDUCTIVE SENSORS

BASIC

First choice in all environments

Contrinex **Basic** range inductive sensors have a worldwide and well-deserved reputation for uncompromising accuracy and exceptional reliability. With best-in-class sensing distances between **1.5 mm** and **40 mm**, the Basic range offers fit-and-forget operation, delivering world-class performance and a highly attractive total cost of ownership.

ANALOG OUTPUT

Continuous analog output for precision control

Fig. 7

EXTRA PRESSURE

Pressure resistant up to 200 bar

Dependable, accurate presence- and position-sensing at pressures up to **200 bar** requires world-class performance and build quality. The **Extra Pressure** range of pressure-resistant inductive sensors delivers exactly that, operating continuously in permanently pressurized conditions. This makes the range especially suitable for offshore installations, the chemical industry, motor lubrication systems and atomic fuel element monitoring. A stainless-steel housing with bonded ceramic or brazed sapphire sensing face and protection class **IP68** guarantees robustness and exceptional reliability in miniature packages sized from $\varnothing 3$ to $\varnothing 6.5$.

MINIATURE

Full functionality, smallest size

Size is often a critical constraint when selecting sensors for position- or presence-sensing. The Contrinex **Miniature** range, which includes the smallest self-contained inductive sensors on the market, meets this constraint without compromising on functionality.

Engineers needing a reliable, repeatable, highly accurate means of measuring the position of a target object should look no further than Contrinex **Analog Output** inductive sensors. This range of sensors has been developed on the platform of **Extra Distance** (Fig. 2) technology for excellent temperature stability, repeat accuracy, and the best long-range sensing capability on the market. With a measurement range of **zero to 40 mm** and detection accuracy on the micron scale, the **Analog Output** sensor range is ideally suited for measuring linear, angular and rotational position (Fig. 7).

HIGH PRESSURE

Resistant to pressure and dynamic stress up to 500 bar

For reliable, accurate sensing in the most demanding pneumatic and hydraulic applications, Contrinex offers a unique range of **High Pressure** sensors with permanent operating pressures of **100 ... 500 bar** and peak pressures up to **1000 bar**.

Suitable for operating temperatures up to 100°C and resistant to more than one million pressure cycles, their IP68 and IP69K protection and oil impermeability make them the robust, reliable choice for the hydraulic industry. Fit-and-forget operation virtually eliminates sensor replacement costs. Exceptional performance and world-class quality are assured in sizes from M5 to M18.

EXTREME

Extreme durability in harsh environments

Only the toughest sensors survive the most extreme environments, and **Extreme** range inductive sensors from the **Full Inox** family are ideally equipped for the job. Thanks to one-piece stainless-steel (V2A/AISI 303) construction and a hermetically sealed cable entry, **Extreme** sensors are corrosion-resistant, imper-

vious to oil, and pressure-resistant to **100 bar**. Rugged, reliable and highly accurate, the **Extreme** range is at home in the most challenging circumstances.

2-WIRE

Easy installation and high switching frequency

The **2-Wire** range of DC, AC/DC and NAMUR sensors is constructed on the **Classics** (Fig. 1) technology platform and includes sizes from $\varnothing 3$ to M30, plus a 5×5 mm square-section type. Devices are available for embeddable or non-embeddable mounting and connection is by means of cable or connector. With a sensing range up to 15 mm, Contrinex **2-Wire** sensors ensure optimal equipment utilization.

EXTRA TEMPERATURE

Temperature resistant up to 120°C

Inductive sensors from the **Extra Temperature** range offer the ideal solution for position- and presence-sensing applications at temperatures from as low as minus 40°C up to 120°C. Industrial processes often generate heat, resulting in temperatures that would damage a standard sensor, but the

stainless-steel construction and robust electronics of Contrinex **Extra Temperature** sensors ensure reliable, accurate operation and minimal downtime, even in the most demanding environments.

HIGH TEMPERATURE

Temperature resistant up to 180°C (230°C with external amplifier)

Contrinex **High Temperature** inductive sensors are designed for continuous operation at temperatures from 0°C up to 180°C (up to 230°C with remote electronics). The range is ideal for the harshest environments, including automotive paint shops, metal-treatment plants and glass manufacturing.

WELD-IMMUNE

Immune to magnetic fields and resistant to weld spatter

Contrinex **Weld-Immune** inductive sensors are ideal for the harshest welding environments thanks to the revolutionary triple protection. The range includes anti-spatter coated, weld-field immune and impact resistant sensors. For extensive protection, we recommend using our accessories such as our coated mounting brackets, spatter-resistant cables and protective

tubes. Benefits include reduced cleaning and maintenance costs, longer sensor service-life and thus increased machine availability.

CHIP-IMMUNE

For the harshest machining environments

Even when covered with chips of steel, stainless steel, aluminum, brass, copper or titanium, **Chip-Immune** inductive sensors from the **Full Inox** technology family will reliably detect targets made of these metals. The sensors achieve this with a slightly modified form of Condet® technology. In a one-piece stainless steel housing with **IP68/IP69K** protection rating and a wide operating temperature range

from -25 to +85°C (-13 to +185°F), they are particularly suitable for use in the harsh environments of the machining industry. Depending on sensor diameter (**M12**, **M18** or **M30**), operating distances of 3, 5 or 12 mm are available.

DOUBLE-SHEET

Detection of double-sheets in metalworking

For double-sheet detection, sensors from the **Full Inox** (Fig. 4) family are used. Its inductive technology enables discrimination between one and two conductive metal sheets of a defined thickness, achieving sensitivity of 0.8–1.2 mm per sheet. This

discrimination aids in the prevention of double feeds into blanking and forming processes which ultimately saves damage to tooling. The one-piece, stainless-steel construction of these sensors makes them the most durable on the market. They withstand the impacts that are a common hazard in double-sheet detection applications close to moving sheet metal, ensuring minimal down-time.

MARITIME

DNV approved for ships, ports and offshore

The **Maritime** range of embeddable inductive sensors, certified by DNV, offers unrivaled performance features based on **Full Inox** technology (Fig. 4). With a one-piece housing in V4A/AISI 316L stainless steel and an enclosure rating of IP68/IP69K, they are not only impervious, but also corrosion-proof and resistant to salt water. Their EMC protection also meets specific maritime requirements, particularly with regard to power supply variations and low frequency immunity. They offer the longest service life of any inductive sensor on the market, even in the harshest marine environments.

ularly with regard to power supply variations and low frequency immunity. They offer the longest service life of any inductive sensor on the market, even in the harshest marine environments.

WASHDOWN

Ecolab approved for harshest cleaning processes

Washdown inductive sensors are certified to operate continuously and reliably in the harsh conditions of the food, beverage and pharmaceutical industries, ensuring uninterrupted production. Rated to **IP68** and **IP69K**, they are pressure resistant up to **80 bar**, **food safe and corrosion resistant**; additionally Full Inox – Series 700 are **Ecolab** certified. Washdown sensors are available in conventional **Classics**

(Fig. 1) technology, size M12, or **Full Inox** (Fig. 4) technology, sizes M12, M18 and M30. Full Inox types have a totally impervious one-piece housing in stainless-steel (V4A/AISI 316L), including the sensing face. They are therefore highly resistant to the corrosive chemicals used for clean-in-place or wash-down processes.

$$1 + 1 = 2$$

APPLICATION

Extra Distance inductive sensors detect presence of metal washers in plastic assemblies

A plastics manufacturer tests batches of control knobs for in-car audio systems before shipment to automotive assembly plants; each knob contains a small metal washer that occasionally becomes dislodged. A custom-built testing machine tests a tray of 70 knobs in a single cycle; long-distance inductive sensors, positioned directly below the knobs, confirm the presence of a washer in each assembly.

INDUSTRIES

Automotive production and supply, machine tool, energy, packaging, logistics, materials handling, textile, assembly, automation

Textile spinning machine automation

Wind turbine speed monitoring

Presence sensing in automotive factory

Position detection on crane

BASIC

INDUCTIVE SENSORS

Contrinex **Basic** inductive sensors have a worldwide and well-deserved reputation for uncompromising accuracy and exceptional reliability. With best-in-class sensing distances between **1.5 mm** and **40 mm**, the Contrinex **Basic** range offers fit-and-forget operation, delivering world-class performance and a highly attractive total cost of ownership.

KEY ADVANTAGES

Classics, Extra Distance and Full Inox

- ✓ High quality ASIC sensors
- ✓  IO-Link
- ✓ Exceptional price/performance ratio
- ✓ Excellent accuracy
- ✓ Outstanding temperature compensation
- ✓ Vibration and shock resistant
- ✓ Long operating distance

Full Inox

- ✓ Extremely robust one-piece stainless-steel housing
- ✓ Corrosion resistant
- ✓ IP68 and IP69K, water resistant
- ✓ Pressure resistant up to 80 bar (1,160 psi)

APPLICATION

Miniature inductive sensors ensure gripper jaws are fully open before initiating automated assembly

During automated assembly of delicate components by a multi-finger gripper, impacts between gripper fingers and fragile components cause costly handling errors and damage. To prevent this, the jaws must be fully open before the gripper descends to pick up a component. Miniature inductive sensors with a diameter of just 3 mm are mounted above each gripper finger, detecting the open position and providing reliable confirmation that the jaws are fully open before picking is initiated.

INDUSTRIES

Machine tool, vehicles, assembly, automation, robotics, micromechanics, special purpose machines

Robotics for pick-and-place

Linear drive technology

Machine tool position control

Textile spinning machine automation

MINIATURE INDUCTIVE SENSORS

FULL FUNCTIONALITY, SMALLEST SIZE

Size is often a critical constraint when selecting sensors for position- or presence-sensing. The Contrinex **Miniature** range, which includes the smallest self-contained inductive sensors on the market, meets this constraint without compromising on functionality.

KEY ADVANTAGES

Classics, Extra Distance and Full Inox

- ✓ High quality ASIC sensors with  IO-Link interface
- ✓ Smallest self-contained inductive sensors on the market
- ✓ Outstanding temperature stability from -25°C (-13°F) to $+70^{\circ}\text{C}$ ($+158^{\circ}\text{F}$) or $+85^{\circ}\text{C}$ ($+185^{\circ}\text{F}$) for Full Inox types
- ✓ High switching frequency up to 8,000 Hz
- ✓ Electronics vacuum potted for optimum long-term reliability under high stress

Full Inox

- ✓ Extremely robust one-piece stainless-steel housing
- ✓ Corrosion resistant
- ✓ Water resistant
- ✓ Pressure resistant up to 120 bar (1,740 psi)

APPLICATION

Rugged inductive sensors confirm engagement of safety interlocks on hooklift trucks

A hooklift truck utilizes a hydraulic system for loading and unloading a demountable container. Once the container is correctly positioned on the vehicle's load bed, interlocks engage with its base, securing it in position. Rugged sensor systems detect full engagement of the interlocks, ensuring the truck is safely loaded prior to driving away. Sensors must be mechanically robust and withstand harsh outdoor conditions.

INDUSTRIES

Automotive production and supply, machine tool, maritime, vehicles, packaging, logistics, materials handling

Tools for machining metal components

Mixing, lifting and tipping mechanisms

Packaging systems

Automotive part sensing

EXTREME INDUCTIVE SENSORS

EXTREME DURABILITY IN HARSH ENVIRONMENTS

Only the toughest sensors survive the most extreme environments. Thanks to one-piece stainless-steel (V2A/AISI 303) construction and a hermetically sealed cable entry, **Extreme** sensors are corrosion-resistant, impervious to oil, and pressure-resistant to **100 bar**. Rugged, reliable and highly accurate, the **Extreme** range is at home in the most challenging circumstances.

KEY ADVANTAGES

- ✓ Mechanically and chemically extremely robust
- ✓ Corrosion resistant
- ✓ IP68 and IP69K, water resistant
- ✓ Pressure resistant up to 100 bar (1,451 psi)
- ✓  IO-Link

APPLICATION

High-resolution analog inductive sensor measures thickness of moving textile webs

A specialized textile-testing machine measures the thickness of a moving textile web continuously and in real time. As the web passes over a roller, a precision analog inductive sensor, positioned directly above the roller, rests lightly on the top of the web. By sensing the distance through the material to the roller, the sensor measures the thickness of the web.

INDUSTRIES

Machine tool, packaging, logistics, materials handling, textile, printing, metal sorting, quality control, vibration monitoring

Distance monitoring for position control

Drive-belt tension monitoring

Logistics systems

Machine tools

ANALOG OUTPUT INDUCTIVE SENSORS

ANALOG OUTPUT FOR DISTANCE CONTROL

Best-in-class temperature stability and a measurement range of zero to 40 mm make the Contrinex **Analog Output** sensor range ideally suited for measuring linear, angular and rotational position. With detection accuracy in the micron range and the best long-range sensing capability on the market, these sensors offer world-class performance with an attractive total cost of ownership.

KEY ADVANTAGES

- ✓ Longest sensing ranges
- ✓ Best temperature stability
- ✓ Excellent repeat accuracy
- ✓ Resolution in μm range
- ✓ Current or voltage output

APPLICATION

Inductive sensors confirm retraction of stabilizer legs in mobile cranes

A manufacturer of mobile cranes uses two-wire inductive sensors with N.C. output function to detect the position of stabilizer legs as part of the vehicle safety system. Before the system will allow the driver to drive the vehicle away, sensors confirm that stabilizer legs have been retracted.

INDUSTRIES

Automotive production and supply, machine tool, packaging, logistics, materials handling, textile

Automotive part sensing

Spindle-cutting machine tool

Textile spinning machine automation

Logistics

2-WIRE INDUCTIVE SENSORS

EASY INSTALLATION AND HIGH SWITCHING FREQUENCY

The **2-Wire** range of DC, AC/DC and NAMUR sensors is constructed on the **Classics** technology platform and includes sizes from Ø3 to M30, plus a 5 × 5 mm square-section type. Devices are available for embeddable or non-embeddable mounting and connection is by means of cable or connector. With a sensing range up to **15 mm**, Contrinex **2-Wire** sensors ensure optimal equipment utilization.

KEY ADVANTAGES

- ✓ Two-wire sensors for series connection
- ✓ Sizes from Ø3 mm to M30 and 5 × 5 mm
- ✓ DC and AC/DC types
- ✓ NAMUR types with switching frequencies up to 10,000 Hz

APPLICATION

Inductive sensors check presence of correct drilling tool in CNC machine

During operation of an automated CNC machining center, pressurized machining fluid lubricates and cools the drill assembly before the tool-changing robot selects the next tool. Standard inductive sensors would be unreliable in this harsh environment. Instead, Extra Pressure sensors are used to check the presence of the correct drilling tool on the robot arm. With increased pressure resistance, a gas-tight sensing face, a protection rating of IP68 and PUR cable, these sensors provide high accuracy and long life, even when exposed to pressurized fluids.

INDUSTRIES

Automotive production and supply, machine tool, energy, pneumatics, lubrication systems, pumps, valves

Micromechanical grippers

Pump and valve control

Automotive part sensing

Machine tools

EXTRA PRESSURE INDUCTIVE SENSORS

PRESSURE RESISTANT
UP TO 200 BAR (2,901 PSI)

Dependable, accurate presence- and position-sensing at pressures up to **200 bar** requires world-class performance and build quality. Contrinex **Extra Pressure** inductive sensors deliver exactly that, operating continuously in pressurized conditions. The combination of a stainless-steel housing and an impermeably bonded ceramic or sapphire-glass sensing face guarantees robustness and reliability.

KEY ADVANTAGES

- ✓ Pressure resistant up to 200 bar (2,901 psi)
- ✓ High quality ASIC sensors with  IO-Link interface
- ✓ Mechanically and chemically rugged
- ✓ Impervious: IP68
- ✓ Gas-tight sensing face
- ✓ Miniature devices

APPLICATION

Ram position sensing for manual punch-rieving tool

A manufacturer of cold-forming tools for joining sheet metal uses position sensing to control the operation of a manual punch-rieving tool. A high-pressure inductive sensor mounted directly into the wall of a small pneumo-hydraulic cylinder detects the position of the hydraulic ram, preventing the operating cycle from starting unless the ram is fully retracted.

INDUSTRIES

Automotive production and supply, machine tool, energy, maritime, hydraulic and fluid power, concrete pumps, injection molding machines

Hydraulic cylinder control with sensors

Valve control for concrete pumps

Automotive industry

Maritime industry

HIGH PRESSURE INDUCTIVE SENSORS

PRESSURE RESISTANT UP TO 500 BAR (7,255 PSI)

Contrinex **High Pressure** inductive sensors are suitable for continuous duty at pressures up to **500 bar** (1,000 bar peak pressure), ensuring reliable sensing in the most demanding pneumatic and hydraulic applications. Available with classic metal housing or one-piece, stainless-steel construction, these sensors detect the smallest parts and are ideal for piston-control applications.

KEY ADVANTAGES

- ✓ Highest operating (500 bar/7,255 psi) and peak pressure (1,000 bar/14,510 psi) on the market
- ✓ Resistant to pressure cycles: 50 times longer lifetime under pressure than the market standard
- ✓ Gas-tight sensing face
- ✓ Large temperature range -25°C (-13°F) ... $+100^{\circ}\text{C}$ ($+212^{\circ}\text{F}$)
- ✓ High quality ASIC sensors with  **IO-Link** interface

APPLICATION

Reliable presence sensing despite elevated temperature for automated laundry system

Highly automated laundry systems use inductive sensors for presence sensing in ironing-lane processes. Temperatures in this environment are too high for standard sensors, but pose no problem for temperature-resistant sensors of the Extra Temperature range. They operate reliably at temperatures up to 120°C (248°F), are well protected against ambient humidity (IP67) and include an integral IO-Link interface for communication with modern control and management systems.

INDUSTRIES

Automotive production and supply, machine tool, energy, aerospace

EXTRA TEMPERATURE INDUCTIVE SENSORS

TEMPERATURE RESISTANT UP TO +120°C (+248°F)

Contrinex **Extra Temperature** inductive sensors offer the ideal solution for position- and presence-sensing applications at temperatures up to 120°C (248°F). Industrial processes often generate more heat than is suitable for standard sensors. In such environments, the stainless-steel construction and robust electronics of this range ensure reliable, accurate operation and minimal downtime.

KEY ADVANTAGES

- ✓ Temperature resistant up to +120°C (+248°F)
- ✓ Excellent long term reliability
- ✓ Outstanding accuracy
- ✓ High quality ASIC sensors with  **IO-Link** interface

APPLICATION

High Temperature inductive sensors monitor position of fire-proof ventilation dampers

A manufacturer of fire-resistant air dampers for tunnel ventilation uses High Temperature inductive sensors to monitor damper position. They provide feedback to the ventilation control center, which adjusts dampers and fans as necessary in both normal and emergency operation. For reliable operation at temperatures up to 230°C (446°F), sensor electronics are built into a separate M12 stainless-steel housing.

HIGH TEMPERATURE INDUCTIVE SENSORS

TEMPERATURE RESISTANT UP TO +230°C (+446°F)

Exceptional working conditions demand uncompromising performance, and Contrinex **High Temperature** inductive sensors deliver in every respect. Designed for continuous operation at temperatures up to 180°C (230°C with remote electronics), this range is ideal for the harshest environments, including automotive paint shops, metal-treatment plants and glass manufacturing.

KEY ADVANTAGES

- ✓ Highest long-term stability due to fully potted electronics
- ✓ Long sensor life
- ✓ Reliable sensing in high-temperature applications
- ✓ Compact construction with integral amplifier for temperatures up to +180°C (+356°F)
- ✓ External amplifier module for temperatures up to +230°C (+446°F)

APPLICATION

Presence sensing ensures correct part placement on welding machine

Weld-Immune inductive sensors ensure that metal panels are correctly located on fixtures prior to welding. The anti-spatter coating, weld-field immunity and impact resistance of these sensors ensure that operation is reliable and downtime negligible, despite the harsh environment. Sensor service-life is increased, while maintenance costs are reduced significantly.

WELD-IMMUNE INDUCTIVE SENSORS

REVOLUTIONARY PROTECTION FOR LONG LIFE

Contrinex **Weld-Immune** inductive sensors are ideal for the hostile working environments found in automotive factories and other industrial welding plants. One-piece, stainless-steel construction and best-in-class sensing ranges of up to 16 mm prevent the risk of collision damage. Types with an ACTIVSTONE® coating offer the highest level of weld-spatter resistance, reducing cleaning and maintenance costs.

KEY ADVANTAGES

- ✓ Exceptionally resistant to weld spatter in spot, MIG and MAG applications thanks to Activstone® coating protection
- ✓ Resistant to magnetic interference from medium-frequency weld fields, current up to 15 kA
- ✓ Maximum impact resistance on the Full Inox sensor with one-piece stainless-steel housings and Condet® technology
- ✓ Protection beyond the sensor with coated mounting brackets, spatter-resistant cable and protective tubes

CHALLENGES

SOLUTIONS

WELD SPATTER

- Reduced sensor performance
- Spatter accumulation
- Difficulty replacing sensors

MAGNETIC FIELDS

- Interference with inductive sensor
- False triggering
- Sensor output locking on

MOVING PARTS

- Mechanical impact with moving workpieces
- Damage to ferrite, electronics and housing
- Frequent machine downtime

ANTI-SPATTER COATING

Activstone® coating on all external surfaces resists weld spatter in spot, MIG and MAG applications.

WELD-FIELD IMMUNITY

Contrinex sensors resist magnetic interference from medium-frequency weld fields, current up to 15 kA.

IMPACT RESISTANCE

With one-piece stainless-steel housings and **Condet®** technology, Full Inox sensors offer maximum impact resistance.

ACCESSORIES

For extensive protection, use **Activstone®** coated mounting brackets, spatter-resistant cables and protective tubes. Uncoated brackets are also available.

PROTECTION BEYOND THE SENSOR

Reduce downtime with accessories that protect the surrounding installation against the challenges of welding environments. Mounting brackets with ACTIVSTONE® coating resist accumulation of weld spatter and so reduce the need for cleaning. A special range of stainless-steel mounting brackets offers exceptionally high mechanical and chemical resistance.

For optimal protection use the long-life cables in spatter-resistant PUR and the high-temperature, spatter-resistant protective tubes to enhance machine availability.

APPLICATION

Sensors with full-metal housing withstand aggressive fluids and hot metal chips in machine tools

Chip-Immune sensors on machine tools control the position of automatically fed workpieces as well as the workpiece clamping system. They are insensitive to dirt, heat, metal chips and dust. They also resist mechanical impacts, aggressive cutting oils, drilling emulsions and cleaning agents.

INDUSTRIES

Automotive production and supply, machine tool

Tools for machining metal parts

Metal recycling equipment

Machine tools

Automotive production and supply

CHIP-IMMUNE INDUCTIVE SENSORS

FOR THE HARSHTEST MACHINING ENVIRONMENTS

Chip-Immune sensors prevent false switching due to metal debris in milling, drilling or grinding processes. Even when sensors are covered with metal chips, they reliably detect steel or aluminum objects. With one-piece stainless-steel housings, an **IP68/IP69K** protection rating and operating temperatures from -25°C to $+85^{\circ}\text{C}$ (-13°F to $+185^{\circ}\text{F}$), they are ideal for the harshest machining environments.

KEY ADVANTAGES

- ✓ Detection not influenced by chips of steel, stainless steel, aluminum, brass, copper or titanium
- ✓ Detection of targets made of the above metals
- ✓ Robust, one-piece stainless-steel housing, protection rating IP68 and IP69K
- ✓ Temperature range $-25^{\circ}\text{C} \dots +85^{\circ}\text{C}$ ($-13^{\circ}\text{F} \dots +185^{\circ}\text{F}$)
- ✓ Size M12, M18 and M30
- ✓ Operating distances up to 12 mm
- ✓  IO-Link

APPLICATION

Double-sheet sensing for deep-drawing press

A producer of deep-drawn metal parts for the automotive industry uses double-sheet sensing to prevent costly tool damage and downtime. An inductive sensor checks sheet metal as it is presented to the forming press. If it detects that two or more sheets have stuck together, the machine control system rejects the material and prevents the press from operating.

INDUSTRIES

Automotive production and supply, machine tool, surface treatment, stamping and forming, aluminum industry

Robot handling of sheet metal

Double-feed prevention for formed parts

Aluminum industry

Automotive production and supply

DOUBLE-SHEET INDUCTIVE SENSORS

DOUBLE-SHEET DETECTION IN METALWORKING

For double-sheet detection, sensors from the **Full Inox** family are used. Its inductive technology enables discrimination between one and two conductive metal sheets of a defined thickness, achieving sensitivity of 0.8–1.2 mm per sheet. This discrimination aids in the prevention of double feeds into blanking and forming processes which ultimately saves damage to tooling.

KEY ADVANTAGES

- ✓ Double-sheet detection (steel and aluminum) with sensitivity of 0.8–1.2 mm per sheet
- ✓ Full Inox: extremely robust one-piece stainless-steel housing
- ✓ Corrosion resistant
- ✓ IP68 and IP69K
- ✓ Pressure resistant up to 80 bar

APPLICATION

Rugged inductive sensor measures rotation velocity of wind turbine blades

Modern wind turbines operate continuously in remote, highly demanding environments. Exceptional reliability is essential as opportunities for maintenance are limited. Turbine rotation velocity is a key operating parameter and manufacturers require robust sensor systems that provide accurate measurement in real-time. Rugged presence-sensing systems withstand harsh exposed conditions, both onshore and offshore, while delivering the required accuracy and reliability.

INDUSTRIES

Maritime, machine tool, energy, vehicles, ships, port and offshore installations

Wear monitoring, propeller shaft

Machinery spaces in ships

Machine tools

Offshore installations

MARITIME INDUCTIVE SENSORS

FOR SHIPS, PORTS AND OFFSHORE

The **Maritime** range of embeddable inductive sensors, certified by DNV, offers unrivaled performance features based on **Full Inox** technology. With a one-piece housing in V4A/AISI 316L stainless steel and an enclosure rating of **IP68/IP69K**, they are not only impervious, but also corrosion-proof and resistant to salt water. Their EMC protection also meets specific maritime requirements.

KEY ADVANTAGES

- ✓ GL approved, class DNV-GL-CG-0339
- ✓ Extremely rugged sensors, fit for Industry 4.0
- ✓ Special EMC protection
- ✓ Resistant to corrosion and salt water
- ✓ Impervious, enclosure rating IP68 or IP69K
- ✓ Temperature range $-25 \dots +85^{\circ}\text{C}$ ($-13 \dots +185^{\circ}\text{F}$)
- ✓ Full Inox types: one-piece stainless-steel housing (V4A/AISI 316L), factor 1 on steel and aluminum
- ✓ Pressure-resistance available up to 500 bar (800 bar peak)
- ✓  **IO-Link** interface

APPLICATION

Washdown inductive sensors monitor position of control valves during dairy-product processing

During manufacture of dairy products, raw milk travels between successive processes through stainless-steel pipework. Rotary-shaft control valves maintain process sequences correctly, ensuring that no cross-contamination occurs during CIP cleaning after each batch is completed. Robust washdown inductive sensors, mounted on existing rotary actuators, monitor control-valve status around the clock, providing real-time positional feedback to a plant-wide control system in a simple, cost-effective manner.

INDUSTRIES

Food and beverage, packaging, logistics, materials handling, pharmaceutical industry, industrial cleaning systems

Sorting conveyor for egg packaging

Brewery production equipment

Pharmaceutical industry

Automated laundry system

WASHDOWN INDUCTIVE SENSORS

ECOLAB APPROVED FOR HARSHTEST CLEANING PROCESSES

Washdown inductive sensors are certified to operate continuously and reliably in the harsh conditions of the food, beverage and pharmaceutical industries, ensuring uninterrupted production. Rated to **IP68** and **IP69K**, they are pressure resistant up to **80 bar**, **food safe and corrosion resistant**; additionally Full Inox – Series 700 are **Ecolab** certified.

KEY ADVANTAGES

- ✓ Corrosion resistant
- ✓ Food safe
- ✓ IP68/IP69K protection
- ✓  IO-Link interface
- ✓ Extremely rugged Full Inox types: one-piece stainless-steel housing, factor 1 on steel and aluminum
- ✓ Ecolab approved

PHOTOELECTRIC SENSORS

HIGHLIGHTS

- ✓ Complete C23 series with first-class sensing ranges
- ✓ Excellent background suppression sensors
- ✓ Smallest self-contained miniature sensors on the market
- ✓ Wide range of fiber-optic amplifiers, including  IO-Link
- ✓ Excellent color and contrast recognition sensors

NEW

- ✓ C23 sensors with patented UV technology for transparent object detection, including  IO-Link
- ✓ M18 series with short plastic housing and  IO-Link
- ✓ Distance measurement sensors in C23 and C55 size with  IO-Link
- ✓ Detection and measurement light grids
- ✓ Fork sensors with  IO-Link

PHOTOELECTRIC SENSORS

OPERATING PRINCIPLE

The light-emitting diode (LED) emits a beam of modulated light towards the target. This beam is interrupted by the target, causing partial reflection. A part of the reflected light reaches the sensing face of the receiver. Depending on the operating principle, either the interrupted beam or the reflected light is used for further processing.

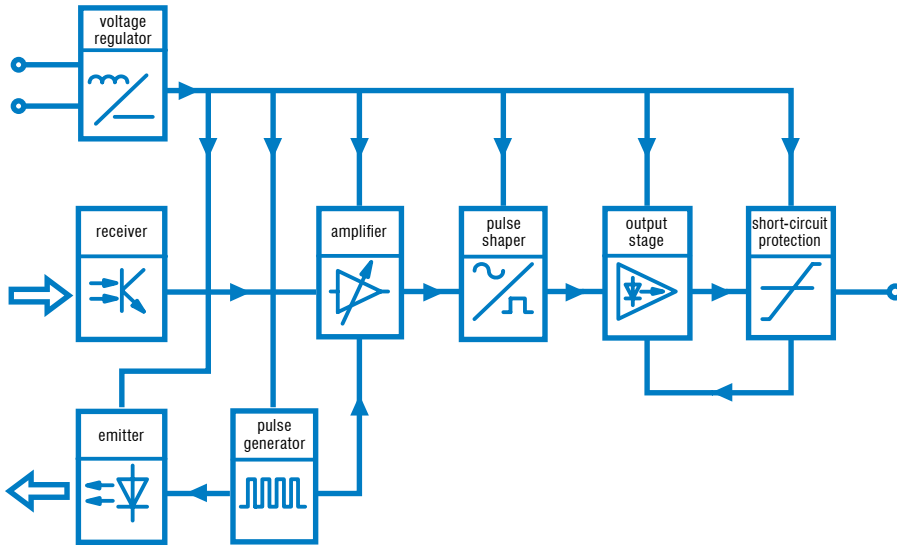

Fig. 8: Functional blocks of a photoelectric sensor

TECHNOLOGY FAMILIES

DIFFUSE

Versatile and cost-effective

A diffuse-mode, or energetic-diffuse, photoelectric sensor is a reflective sensor, containing a transmitter and a receiver in a single housing. The sensor emits a light beam toward a distant target that acts as a reflector, returning part of the transmitted light to the sensor. The receiver detects the amount of light reflected by the target, triggering the sensor when the light intensity reaches a threshold value.

Diffuse-mode sensors are cost-effective as they do not require separate reflectors or receivers, and detect reflective targets with ease. Sensing range depends on the target's size, shape, color

Fig. 9: Diffuse sensing

and surface finish, although sensor sensitivity is adjustable during installation to compensate for targets with poor reflective qualities.

BACKGROUND SUPPRESSION

Excellent suppression of light-colored backgrounds

Diffuse-mode photoelectric sensors with background suppression emit a focused light beam toward a distant target. Part of the beam is reflected from the target and returns to the sensor, striking a position-sensitive receiver. The receiver distinguishes between reflections from the target and reflections from background objects, only triggering the sensor when the signal reaches a value that relates to the preset target distance.

The sensing range is practically insensitive to the target's size, color, shape and surface finish, and background-suppression sensors provide highly reliable detection of "difficult" targets, even against a light background. Stable, accurate detection of small, fast-moving parts on conveyors or automated machinery is possible over the entire sensing range, eliminating false triggering by objects in the background.

REFLEX

Long sensing range in a single-housing device

A reflex, or reflective, photoelectric sensor contains a transmitter and a receiver in a single housing, and emits a pulsed, focused light beam toward a distant reflector. Reflected light returns to the sensor, arriving at the receiver. When a target object interrupts the light beam, the receiver detects the reduced light intensity and triggers the sensor.

Fig. 10: Reflex sensing

The relatively high level of reflected light allows reflex sensors to achieve sensing distances up to eight meters.

THROUGH-BEAM

Emitter and receiver in separate housings for sensing ranges from 0 to 50 m

Fig. 11: Through-beam sensing

A through-beam photoelectric sensor comprises an emitter and receiver, each mounted in a separate housing. The emitter is aligned so that the greatest possible amount of pulsed light from its emitting diode reaches the receiver (Fig. 11). The receiver, which is mounted beyond the target area, processes incoming light in such a way that it is clearly separated from ambient and other light sources. Any interruption of the light beam by a target triggers the sensor, causing its output signal to switch.

Contrinex through-beam photoelectric sensors are ideal for industrial applications where sensing components must be mounted some distance from the target area. Through-beam sensors utilize infrared,

visible and laser light sources to detect opaque and semi-transparent targets, reliably and repeatably, at extended distances.

ANALOG OUTPUT

Precise distance control

Photoelectric sensors with analog outputs are ideal for measuring absolute values of distance. Using background suppression-mode technology, analog photoelectric sensors produce an output signal that is accurately calibrated and approximately proportional to the distance of the target from the sensor. Users have a choice of current or voltage outputs that are compatible with all modern control systems.

TRANSPARENT OBJECT

Outstanding reliability and ease of adjustment environments

The Contrinex **TRU-C23** photoelectric sensor is ideally suited for the presence control of transparent objects. Its patented technology uses **UV light**. Since transparent materials like plastic or glass absorb large amounts of polarized UV light, it is very easy to set the threshold at which the sensor switches. The shape or thickness of the target has no influence on detection. In addition, sensor performance is unaffected by dirt, water drops or aging.

COLOR AND CONTRAST

Excellent resolution for smallest variations

Color photoelectric sensors utilize energetic-diffuse sensing technology to detect variations in target color, allowing color sorting or color control. A "teach-in" function is used to program up to three separate outputs. Contrinex color photoelectric sensors also feature five selectable tolerance levels for each output.

Contrast sensors are ideal for detecting print marks in printing, labelling and packaging processes. Using a narrowly focused light beam and RGB emission technology, contrast sensors automatically select the best emission color (red, green or blue) during the teach-in procedure.

PRODUCT RANGES

STANDARD

First-class performance for general use

Contrinex **Standard** photoelectric sensors are ideal for general position- and presence-detection in almost any industry. With first-class sensing ranges and outstanding background suppression characteristics, the Standard range of sensors delivers very high accuracy and reliability. Light sources include infrared, laser and pinpoint LED.

FIBER-OPTIC SENSORS AND FIBERS

Reliable short and long-range sensing

The highly versatile **Fiber-Optic** range includes the self-contained **3030** series and the DIN-rail mounted **3060** series, suitable for multiple-sensor applications. **Synthetic fibers** are available for general use and **glass fibers** for high temperatures and aggressive environments.

LIGHT GRIDS

Fast detection, counting and measurement

The use of infrared light grids for non-contact measurement offers many advantages, including fast response times, reliable detection of the most varied objects and immunity to interference from ambient light. Typical applications can be found in logistics, automated packaging systems, warehouses and the wood industry.

MINIATURE

Smallest on the market

The Contrinex **Miniature** range packs exceptional position- and presence-sensing performance into the smallest self-contained photoelectric sensors on the market. Designers have the choice of through-beam or diffuse sensors in **Ø4** and **M5** cylindrical metal housings that offer multiple mounting methods and beam orientation. For fully embedded applications, sensors with spherical sapphire-glass lenses produce focused, cylindrical light beams.

DISTANCE

High precision and direct digital transmission

DTR-C23 and **DTL-C23** sensors use a triangulation method for highly accurate distance measurement at short range. Types with red light (**DTR-C23**) measure distances **up to 200 mm**, while the measurement range for laser types (**DTL-C23**) is **up to 100 mm**. Applications include small-part detection, position or height checking and monitoring material thickness on winding rolls.

FORK

Fast detection and counting in one housing

Fork sensors come either with an infrared or red LED with a detection frequency up to 14 kHz. They operate like a through beam sensor with the advantage of having the sensing and receiving element included in the same housing, thus reducing efforts on alignment and cable assembly. Fork sensors are particularly useful in packaging application to detect and count high speed objects or check the presence of a cap, hood or cover.

APPLICATION

Miniature photoelectric sensor detects fill level during secondary packaging operations

During secondary packaging of bags of confectionery, manufacturers arrange bags in overlapping layers. Multi-axis pick-and-place packing robots align and pack layers of bags in preformed cardboard cartons. The filled cartons are conveyed to case-sealing stations. A highly reliable photoelectric sensor, mounted directly above the conveyor, senses the height of the top layer of bags in each carton before sealing and rejects insufficiently filled cartons. Rugged photoelectric sensors with background suppression from the Contrinex C23 range are ideal for this application. A pinpoint red LED with a 10 mm-diameter light spot at the maximum sensing range of 300 mm ensures highly reliable detection of objects of almost any color against light or dark backgrounds. These sensors are well suited to both the task and the environment.

INDUSTRIES

Automotive production and supply, machine tool, packaging, logistics, materials handling, food and beverage, textile

Textile spinning machine automation

Beverage filling machines

Conveyor systems

Automotive part sensing

STANDARD PHOTOELECTRIC SENSORS

FIRST-CLASS PERFORMANCE FOR GENERAL USE

Contrinex **Standard** photoelectric sensors are ideal for general position- and presence-detection in almost any industry. With first-class sensing ranges and outstanding background suppression characteristics, the Standard range of sensors delivers very high accuracy and reliability. Light sources include infrared, laser and pinpoint LED.

KEY ADVANTAGES

- ✓ First-class sensing ranges
- ✓ Outstanding background suppression characteristics
- ✓ C23 and M18P series: high quality ASIC sensors with an integral **IO-Link** interface in PNP types
- ✓ Light sources: red, infrared, laser and pinpoint LED

C23 Series

- ✓ Excellent background suppression characteristics with pinpoint LED
- ✓ Mutual interference immunity
- ✓ Versions available with stability alarm as second output
- ✓ Enclosure rating IP67, Ecolab approved

M18P Series

- ✓ Short housing: 37 mm with connector (cable types 33 mm)
- ✓ Excellent background suppression characteristics with pinpoint LED
- ✓ Mutual interference immunity
- ✓ Easy flush mounting
- ✓ Easy-to-mount special accessories for right-angle emission

PHOTOELECTRIC SENSORS STANDARD

COMMON FEATURES

Supply Voltage range	10 ... 30 VDC
Output	PNP Light-ON*

* Other types available: PNP, NPN, Light-ON/Dark-ON

OUTPUT

Sensor type
 [H] Background suppression [L] Through-beam
 [R] Reflex [T] Diffuse

[0] High performance [L] Laser
 [1] Standard [W] Face 90°

L[X][X]-118[X][X]-[XXX]-[XXX] — see p. 197

Connection
 [K] Cable [S] Connector — see p. 197

Reference key on page 197

OPERATING PRINCIPLE

- Background suppression
- Diffuse
- Reflex
- Through-beam

ACCESSORIES

- A** Group A: M8 3-pin
Sub-group: Field attachable connectors
Sub-group: Distribution boxes
- B** Group B: M8 4-pin
Sub-group: Field attachable connectors
- C** Group C: M12 4-pin
Sub-group: Field attachable connectors
Sub-group: Distribution boxes
- D** Group D: M12 AC/DC 3-pin
- E** Group E: Universal mounting brackets
Sub-group: Mechanical stops
- F** Group F: Photoelectric mounting brackets
- G** Group G: Photoelectric reflectors
- H** Group H: Sensor tester

		50,000	M18	⚠ Laser class 2, red 660 nm
		50,000	M18	⚠ Laser class 2, red 660 nm

KEY ADVANTAGES

- ✓ Models for lateral sensing
- ✓ Rugged metal housing
- ✓ Shock & vibration resistant due to fully potted electronics
- ✓ Laser types (protection class 2) for accurate detection of smallest targets
- ✓ Sensing range up to 50 m

	1,500	20 × 30 (C23)	LED, red 630 nm	

KEY ADVANTAGES

- ✓ First-class sensing ranges
- ✓ Small plastic housing, 20 × 30 × 10 mm
- ✓ Excellent background suppression characteristics with pinpoint LED
- ✓ IO-Link interface available on PNP types
- ✓ Mutual interference immunity
- ✓ Versions available with stability alarm as second output
- ✓ Enclosure rating IP67, Ecolab approved
- ✓ Versatile mounting brackets for ease of installation

KEY ADVANTAGES

- ✓ Complete miniature sensor series 30 × 30 × 15 mm in rugged Crastin housings
- ✓ Sensing range up to 12,000 mm for through-beam type
- ✓ Shock & vibration resistant due to fully potted electronics
- ✓ Diffuse sensors with precise background suppression
- ✓ Polarizing filter (reflex sensors)
- ✓ High system reserves (excess gain)
- ✓ Pre-failure warning (pollution monitoring)
- ✓ Changeover outputs

KEY ADVANTAGES

- ✓ Compact plastic housing, 40 × 50 × 15 mm
- ✓ Excellent background suppression characteristics
- ✓ Reflex types with special autocollimation optics
- ✓ Adjustable connector

		 5,000	50 × 50 (C55)	 Laser class 1, red 650 nm

KEY ADVANTAGES

- ✓ Compact plastic housing 50 × 50 × 23 mm, IP67 & IP69K, Ecolab certified
- ✓ Time-Of-Flight principle for background suppression
- ✓ Laser class 1 emission
- ✓ Range up to 5,000 mm
- ✓ Reliable detection of tilted objects
- ✓ Ecolab tested and approved

APPLICATION

Miniature photoelectric sensor, mounted in existing structural space of conveyor, detects presence of small parts

A miniature conveyor system uses photoelectric sensors flush-mounted in the conveyor structure itself to detect the presence of small parts. To avoid impairing conveyor function, existing slots in the conveyor had to be widened to accommodate standard sensors. However, by switching to Contrinex Miniature sensors with a diameter of just 4 mm, mounting was possible without modifying the existing slot, saving time and installation costs.

INDUSTRIES

Packaging, logistics, materials handling, assembly, automation, robotics, precision engineering, semiconductors, electronics, vending machines, miniature conveyors, grippers

Micromechanical grippers

PCB component presence check

Detection of small parts

Packaging systems

MINIATURE PHOTOELECTRIC SENSORS

SMALLEST ON THE MARKET

The Contrinex **Miniature** range packs exceptional position- and presence-sensing performance into the smallest self-contained photoelectric sensors on the market. Designers have the choice of through-beam or diffuse sensors in **Ø4** and **M5** cylindrical metal housings that offer multiple mounting methods and beam orientation. For fully embedded applications, **M5** and **Ø4** sensors produce focused, cylindrical light beams.

KEY ADVANTAGES

D04 / M05 / 0507 series

- ✓ Rugged diffuse or through-beam sensors in steel housing: Ø4, M5 or 5 × 7 × 40 mm
- ✓ Extremely compact self-contained photoelectric sensors
- ✓ Accurate target detection due to focused red light beam
- ✓  IO-Link

C12 series

- ✓ Plastic housing, 13 × 21/27 × 7 mm
- ✓ Red pinpoint LED, small visible light spot
- ✓ Long sensing ranges
- ✓ Excellent background suppression up to 120 mm with 3-turn potentiometer

APPLICATION

Transparent-object sensors with patented UV technology detect presence of clear plastic sheet during thermoforming

During automated packaging, high-speed thermoforming lines produce transparent plastic blister-trays from continuous reel-stock material. Transparent-object sensors with patented UV technology detect the presence of the transparent plastic sheet as it is unwound, ensuring the material is correctly tensioned as it enters the loading station. False detection is avoided, ensuring reliable operation with little or no downtime. Ecolab-certified, these sensors are also suitable for the packaging of medical products.

INDUSTRIES

Packaging, logistics, materials handling, food and beverage, filling machines, pharmaceutical industry

Detection of clear plastic bottles

Pharmaceutical vial processing

Detection of glass sheet on conveyor

Packaging systems

TRANSPARENT OBJECT PHOTOELECTRIC SENSORS

OUTSTANDING RELIABILITY AND EASE OF ADJUSTMENT

The **TRU-C23** photoelectric sensor is ideally suited for the presence control of transparent objects. Its patented technology comprises an LED that emits polarized **UV light** and a suitable reflector. Special optics with autocollimation ensure reliable detection and no blind zone. For applications requiring the detection of thicker or larger transparent objects, the **C23 Transparent Standard** provides a highly favorable price-performance ratio.

KEY ADVANTAGES

- ✓  **IO-Link** interface available on PNP types
- ✓ Versions with stability alarm as second output
- ✓ Mutual interference immunity
- ✓ Adjustment by teach button or  **IO-Link**
- ✓ Enclosure rating IP67, Ecolab approved

C23 Transparent UV

- ✓ Extremely reliable detection thanks to strong absorption of UV light by plastic and glass material
- ✓ Easy sensor set-up, even for thinnest transparent objects
- ✓ Low environmental sensitivity minimizes threshold adjustments and maximizes uptime
- ✓ Autocollimated, polarized UV light beam eliminates blind zone, allowing detection of targets close to the sensor or through a small notch
- ✓ Sensing range up to 1,200 mm

C23 Transparent Standard

- ✓ Red polarized light source
- ✓ Calibrated sensing range up to 5,000 mm
- ✓ Sensitivity adjustment via teach button,  **IO-Link** or potentiometer

APPLICATION

Photoelectric fiber-optic sensor detects broken parking-brake cable during manufacture

During manufacture of automotive parking-brake cable, multiple strands of steel wire are twisted together, forming a single cable. After twisting, cable passes to the next process in an unsupported, continuous length. Occasionally, the cable breaks, compromising safety and damaging equipment. Although the cable's exact path is unpredictable, a multi-beam fiber-optic sensor detects its presence, interrupting the process if it breaks.

INDUSTRIES

Packaging, logistics, materials handling, robotics, precision engineering, printed circuit board production, electronics, vending machines, special machinery, quality control

Printed circuit board production

Presence sensing by industrial robot

Packaging systems

FIBER-OPTIC PHOTOELECTRIC SENSORS

RELIABLE SHORT- AND LONG-RANGE SENSING

With self-contained fiber-optic sensors available in housings as small as 30 × 30 × 15 mm, and several models of small DIN-rail mounted amplifiers that accommodate multiple-sensor applications, the Contrinex range is highly versatile. A choice of **synthetic** or **glass optical fibers** provides options for even the most demanding applications.

KEY ADVANTAGES

Fiber-optic sensors

- ✓ Robust 3030 series (30 × 30 × 15 mm)
- ✓ DIN-rail mounted 3060 series (31 × 60 × 10 mm) suitable for multiple-sensor applications
- ✓ Distance setting by potentiometer or teach-in
- ✓  IO-Link

Fibers

- ✓ Large selection of types, including cylindrical light beam, multi-beam and low & high temperature
- ✓ Diffuse or through-beam sensing, axial or radial
- ✓ Synthetic fibers with bending radii from 2 mm, suitable for cutting on-site
- ✓ Glass fibers for high temperatures and aggressive environment

APPLICATION

Distance sensor with IO-Link 1.1 profile detects presence of goods on shelf and measures available shelf space

In a warehouse with an intelligent logistics concept, a robot arm must reliably detect whether goods are on the shelf and measure any available shelf space. With its ability to measure distances of up to 5,000 mm precisely, the C55 distance sensor is perfectly suited for this task. Using its IO-Link interface, it transmits the measurements directly to the control system as millimeter values in digital form, enabling optimal use of warehouse space.

INDUSTRIES

Packaging, logistics, materials handling, woodworking industry, quality control, precision engineering, printed circuit board production

Position control in furniture factory

Sensing and measuring shelf space

Packaging systems

Logistics

DISTANCE PHOTOELECTRIC SENSORS

HIGH PRECISION AND DIRECT DIGITAL TRANSMISSION

As contactless measurement devices, photoelectric **Distance sensors** are suitable for numerous areas of application. C23 types use a triangulation method for accurate distance measurement at short range. For longer ranges, the optical time-of-flight (TOF) method is used by C55 types. Distance measurement is largely independent of target color or surface characteristics and repeatability is high.

KEY ADVANTAGES

C23 distance-measuring sensors

- ✓ Two distance-measurement ranges: 20 ... 80 mm and 30 ... 200 mm
- ✓ Housing 20 × 34 × 12 mm
- ✓ High precision and repeatability
- ✓ Settable analog range for optimum distance measurement
- ✓ Enclosure rating IP67/IP69K

C55 distance-measuring sensors

- ✓ Distance measurement up to 5,000 mm
- ✓ Housing 50 × 50 × 23 mm
- ✓ High precision and repeatability
- ✓ Settable analog range for optimum distance measurement
- ✓ Enclosure rating IP67/IP69K, Ecolab approved
- ✓  IO-Link

APPLICATION

Contrast sensor checks label alignment and confirms presence of print markings during packaging operations

During high-volume production of confectionery, sealed cartons of bagged candy travel by conveyor to a labeling station. A photoelectric contrast sensor, mounted beside the conveyor, checks the label alignment and confirms the presence of print markings as each carton leaves the labeling area. If a label is blank, illegible or wrongly positioned, the carton is diverted to a holding area for investigation.

INDUSTRIES

Packaging, logistics, materials handling, food and beverage, filling machines, printing, quality control, sorting processes, tobacco industry, wood processing machines

Color sorting on drinks conveyor

Detection of anodized products

Detection of marks on cartons

Print-mark detection on label machine

COLOR AND CONTRAST PHOTOELECTRIC SENSORS

EXCELLENT RESOLUTION FOR SMALLEST VARIATIONS

Color sensors detect variations in target color, allowing color sorting or checking. Up to three separate outputs can be programmed using the teach-in function. **Contrast** sensors are ideal for detecting print marks in printing, labeling and packaging processes. With excellent resolution and five tolerance levels and detection is accurate, even when color or contrast differences are minimal.

KEY ADVANTAGES

- ✓ Rugged housing, 40 × 50 × 15 mm
- ✓ Connector adjustable at 0°, 45° and 90°
- ✓ 5 switching tolerance levels

Color sensors

- ✓ Three color-teach channels with independent outputs
- ✓ High positioning tolerance
- ✓ High switching frequency: up to 4 kHz

Contrast sensors

- ✓ Detection of very small print marks thanks to a narrow, collimated light spot
- ✓ RGB emission technology with best emission color automatically selected
- ✓ Excellent tolerance to target distance variations
- ✓ High switching frequency: up to 10 kHz

APPLICATION

Infrared light grids detect misshapen and oversize carton packs after automated shrink-wrapping process

During high-volume packaging operations, conveyors deliver stacked cartons to shrink-wrapping stations. At each station, a wrapping machine encloses a stack in heat-shrink film and an infrared oven shrinks the film to form a sealed pack of cartons. An infrared-light measurement grid, mounted beside the conveyor, checks the dimensions of each pack as it leaves the oven and signals a plant-wide control system if a wrapped pack is misshapen or oversize.

INDUSTRIES

Packaging, logistics, materials handling, assembly, automation, laundry industry, small parts production, woodworking industry

Counting of small objects

Carton measurement and sorting

Logistics systems

Packaging systems

LIGHT GRIDS PHOTOELECTRIC SENSORS

FAST DETECTION, COUNTING AND MEASUREMENT

Contrinex's robust, plug-and-play **light grids** offer fast response times, reliable detection of the most varied objects and immunity to interference from ambient light. **DGI** detection grids can detect objects with diameters of 0.9, 2, 4, 8 or 25 mm, depending on type. **MGI** measurement grids can measure the dimensions of a detected object, and determine its position.

KEY ADVANTAGES

- ✓ Plug-and-play installation
- ✓ Small installation space with cross-section: 40 × 20.5 mm

Detection grids

- ✓ Fast response time 0.8 ms ... 4.8 ms
- ✓ Ideal for detection and counting of even the smallest objects
- ✓ Resolution: 0.9 mm, 2 mm, 4 mm, 8 mm or 25 mm
- ✓ Detection height: up to 2,010 mm

Measurement grids

- ✓ Ideal for position and dimension control
- ✓ Center beam spacing: 5 mm or 12 mm
- ✓ Analog output 0–10 V or 4–20 mA
- ✓ Measurement height: up to 1,418 mm

APPLICATION

Photoelectric fork sensor checks presence of plastic cap and eliminates downtime

During continuous production of fast-moving consumer goods, line stoppages are both costly and time consuming. After filling, sealing and capping, bottles of table sauces proceed for labelling and packaging; at this stage, the undetected absence of a plastic cap from an individual bottle requires manual intervention and potentially the rejection of an entire batch of production. A highly versatile photoelectric fork sensor, positioned directly over the conveyor, senses the presence of a cap on each bottle prior to labelling and triggers an alarm if a cap is missing. Contrinex fork light-barrier sensors with industry-standard IO-Link communication are ideal for this application, offering designers four discrete operating modes and switching frequencies up to 14,000 Hz. With a standard resolution of 0.3 mm (down to 0.1 mm in high-resolution mode) and fork openings from 10 mm to 120 mm, these robust, metal-cased sensors are well suited to both the task and the environment.

FORK SENSORS

PHOTOELECTRIC SENSORS

ROBUST SPACE-SAVING DESIGN OFFERS VERSATILITY AND SIMPLICITY

Contrinex fork light-barrier sensors offer a powerful combination of simplicity, multi-mode operation and compactness, with high-resolution and high-speed sensing as standard. Ideal for general position- and presence-sensing in industrial environments, these versatile, metal-cased devices allow four modes of operation – standard, high-resolution, power and high-speed – and the convenience of a push-pull output. Equipped with the industry-standard IO-Link protocol, they provide a choice of manual or remote set-up and adjustment, simplifying installation while saving time and money.

KEY ADVANTAGES

- ✓ High resolution: Ø 0.1–0.2 mm
- ✓ High frequency up to 14 kHz
- ✓ 4 sensor modes: Standard, High Resolution, Power, Speed
- ✓  IO-Link v1.1
- ✓ Sensitivity adjustment allowing detection of transparent objects
- ✓ Compact design accommodates photoelectric emitter and receiver in a single housing
- ✓ Push-pull output keeps inventory costs down while allowing exceptional flexibility
- ✓ Robust space-saving housing ensures precise alignment requiring no on-site adjustment

ULTRASONIC SENSORS

HIGHLIGHTS

- ✓ Detection independent of target material, color, shape or surface
- ✓ Ready-to-use cylindrical sensors with integral connector
- ✓ Easy adjustment by either potentiometer or teach-in
- ✓ Dual output sensors, including analog and digital
- ✓ High resolution analog output, current or voltage
- ✓ Normal length or short housings
- ✓ Reduced blind zone
- ✓ High excess gain, insensitive to dirt and ambient noise

INDUSTRIES

Packaging, logistics, materials handling, food and beverage, agriculture, filling machines

APPLICATION

Diffuse ultrasonic sensor provides continuous measurement of fill level for water-tank control system

Within a water-supply system, the fill level of a tank must be monitored to ensure a continuous supply of water at a constant pressure. A cost-effective solution is to mount a single diffuse-type ultrasonic sensor in the cover of the tank, where it can provide the control system with constant measurement of the water level. Depending on this information, the control system switches the inlet pump on or off, adjusts its motor speed, and opens or closes the outlet valve.

Level monitoring in plastic production

Liquid level sensing in food industry

Brewery production equipment

Logistics systems

ULTRASONIC SENSORS

IDEAL FOR LIQUID OR GRANULAR TARGETS

Ultrasonic sensors provide reliable, non-contact detection of solid, liquid, granular or powdered materials in air. They emit a high-frequency acoustic signal in the direction of the target and evaluate the reflected signal. The target is detected and, simultaneously, its distance from the sensor can be calculated precisely from the signal's transit time. The target material may be transparent or colored and may have a polished or matt surface.

KEY ADVANTAGES

- ✓ Precise control of position, distance, height and level
- ✓ Sensing ranges up to 6,000 mm
- ✓ Range setting and NO/NC configuration by teach button or wire
- ✓ Diffuse types with foreground and background suppression
- ✓ Reflex types with no blind zone
- ✓ Robust housings in food-grade stainless steel or plastic with integral M12 connector, IP67
- ✓ M18 in standard or short body
- ✓ M30 in standard body or with large head
- ✓ Various output types, including analog, voltage and current
- ✓ Crosstalk prevention through synchronization and multiplexing mode
- ✓ Insensitive to dirt and ambient noise
- ✓ Temperature range $-20 \dots +70^{\circ}\text{C}$ ($-4 \dots +158^{\circ}\text{F}$)

SAFETY LIGHT CURTAINS, SAFETY SENSORS AND RELAYS

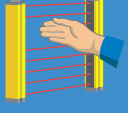

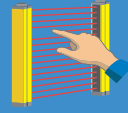

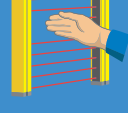

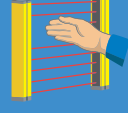

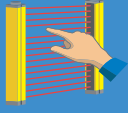

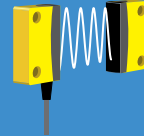

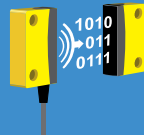

LIGHT CURTAIN HIGHLIGHTS

- ✓ Finger-, hand- and body-access resolutions
- ✓ Operating range from 0.25 ... 50 m
- ✓ Protective heights from 142 ... 1827 mm
- ✓ Category 2 or 4 according to EN/ISO 13849-1
- ✓ Certified TÜV, CE and UL
- ✓ IP65 and IP67
- ✓ Permanent autocontrol
- ✓ 2 channel selection
- ✓ Low power consumption

NEW

- ✓ Slim Type 2 safety light curtains
- ✓ Slim Type 4 safety light curtains with wireless configuration via Bluetooth®
- ✓ Magnetic and RFID safety sensors
- ✓ Signal filter

INTRODUCTION

OPERATING PRINCIPLE OF LIGHT CURTAINS

Safetinx YBB, YBBS and YBES light curtains and YCA access control barriers operate with infrared beams. When the device detects a finger, a hand or a person entering the defined hazardous area, the protective equipment immediately stops the machine, or renders it harmless. When operating in manual restart mode, the reset button enabling the operator to restart the machine must be located outside the hazardous area. From there, the operator must have a full view of the hazardous area to make sure that nobody is in danger before restarting the machine.

Safetinx light curtains and access control barriers are designed to ensure protection of operators working in hazardous areas. A high reliability is achieved by implementing a fail-safe system: devices are thus permanently self-controlled. An internal failure deactivates the output signals, as would an intrusion into the protective field.

Safetinx light curtains and access control barriers are active optoelectronic protective devices (AOPDs) that include a sender and a receiver unit between which coded infrared beams are sequentially exchanged. The receiver unit is connected to a safety relay which transmits signals to the machine control system. Synchronization between the sender and receiver devices is performed optically, i.e. wired connection between the two units is not necessary.

Reception of all beams activates the two independently generated semiconductor outputs (OSSDs) of the receiver unit. The interruption of one or more beams deactivates the outputs within the response time of the AOPD. Any internal fault is detected by the device's permanent self-control function and has the same result as an intrusion into the protective field.

OPERATING PRINCIPLE OF SAFETY SENSORS

Safetinx YSM and YSR safety sensors comprise two parts: a main module and an actuator. They communicate with a contactless system of either magnetic or RFID coding. When the system detects that a guard door, hood or cover is open, the protective equipment immediately stops the machine, or renders it harmless.

YSM magnetic safety sensors use a coded magnet as an actuator and two reed contacts to open or close communication. Unlike light curtains, these sensors do not have OSSD outputs with self-check. They act simply as contactors that open or close depending on the presence or absence of a magnet. It is therefore necessary to apply power to the reed contacts.

YSR RFID safety sensors use an RFID tag as an actuator and a read/write module (RWM) as a contactor. These sensors have self-checking OSSD outputs, similar to light curtains. They are therefore connected in the same way as light curtains to a relay or controller. The RFID tag can be universally and randomly coded or can be teachable, which means the user pairs it with an RWM at first use to create a unique combination.

APPLICATION

Efficient and cost-effective protection with Safetinex Type 2

During semi-automated heat staking of assemblies for domestic white goods, manufacturers use light curtains to preserve operator safety without compromising production throughput. The active optoelectronic protective device (AOPD), mounted directly in front of each bench-mounted heat-press, prevents the press-head from descending if it detects any intrusion in the working area, halting the operating cycle immediately.

BASIC

SAFETY LIGHT CURTAINS

EXCELLENT PRICE/PERFORMANCE RATIO

Light curtains are TÜV, CE and UL-certified according to IEC 61496-1 and -2 and ISO 13849-1. Protective heights range from 142 to 1,827 mm with permanent autocontrol and low power consumption. The aluminum housings are slim (26 × 26 mm) or standard (42 × 48 mm) and connection is via an integral 5-pin M12 connector or pigtail.

KEY ADVANTAGES

FINGER TYPE 4

- ✓ Beam resolution 14 mm
- ✓ Highest protection category: Type 4
- ✓ Max. operating range 3.5 m
- ✓ Operating temperature $-35 \dots +60^{\circ}\text{C}$ ($-31 \dots +140^{\circ}\text{F}$)
- ✓ Standard housing (42 × 48 mm) IP65, IP67

HAND TYPE 4 AND HAND TYPE 2

- ✓ Beam resolution 30 mm
- ✓ Two protection categories: Type 4 or Type 2
- ✓ Standard housing (42 × 48 mm): max. operating range 12 m, operating temperature $-35 \dots +60^{\circ}\text{C}$ ($-31 \dots +140^{\circ}\text{F}$), IP65, IP67
- ✓ Slim housing (26 × 26 mm): max operating range 8 m, no blind zone, operating temperature $0 \dots +55^{\circ}\text{C}$ ($+32 \dots +131^{\circ}\text{F}$), IP65

ACCESS TYPE 4

- ✓ Beam gap: 300, 400 or 500 mm (3 to 6 beams)
- ✓ Highest protection category: Type 4
- ✓ Max. operating range 1... 15 m or 10... 50 m (selectable)
- ✓ Operating temperature $-35 \dots +60^{\circ}\text{C}$ ($-31 \dots +140^{\circ}\text{F}$)
- ✓ Standard housing (42 × 48 mm) IP65, IP67

APPLICATION

Wireless monitoring of hand protection system for automated solar cell assembly

Solar cell production uses potentially hazardous chemicals, and the solar cells themselves can be damaged by improper handling. In an automated assembly line, the hand-protection system must therefore ensure maximum protection of both the operator and the product, while minimizing disruption to operations. This is most efficiently achieved through a system of light curtains with wireless configuration, EDM and restart interlock. These light curtains do not require wired relays, a significant saving for scaled up operations.

INDUSTRIES

Automotive production and supply, machine tool, packaging, logistics, materials handling, textile, assembly, automation, robotics

EXTENDED SAFETY LIGHT CURTAINS

WIRELESS CONFIGURATION VIA BLUETOOTH®

Type 4 light curtains from the **Extended Slim** range are TÜV, CE and UL certified according to IEC 61496-1/2, IEC 61508-1/2/3 and ISO 13849-1. Protective heights range from 170 to 1,610 mm with integrated EDM*, restart interlock and beam coding. Since EDM includes a relay monitoring function, users can also avoid the cost of wired relays. The slim housing (26 × 26 mm) enables blind-zone free installation and connection is via an integral 5-pin or 8-pin M12 pigtail. This range of light curtains is configured and monitored wirelessly via a Bluetooth® signal and free smartphone app – a world first!

*External Device Monitoring

KEY ADVANTAGES

- ✓ Beam resolution 30 mm (hand) or 14 mm (finger)
- ✓ Highest protection category: Type 4
- ✓ Max operating range 5 m
- ✓ No blind zone
- ✓ Beam coding (3 channels), EDM, start and restart interlock configurable functions
- ✓ Wireless configuration via Bluetooth®
- ✓ Operating temperature 0... +55°C (+32... +131°F)
- ✓ Slim housing (26 × 26 mm), IP65

KEY ADVANTAGES

- ✓ Resolution: 14 mm
- ✓ Operating range: 0.4 ... 5 m
- ✓ Protective height: 170 ... 1,290 mm
- ✓ Wireless configuration through Bluetooth®
- ✓ No blind zone
- ✓ Category 4, PL e according to EN/ISO 13849-1
- ✓ Type 4 according to IEC 61496-1 and -2
- ✓ SIL 3 according to IEC 61508
- ✓ Certified TÜV, CE and UL
- ✓ Enclosure rating IP65
- ✓ Housing profile 26 × 26 mm
- ✓ Beam coding (3 channels), EDM, start and restart interlock configurable functions
- ✓ Optical synchronization
- ✓ Permanent autocontrol

APPLICATION

Interlock system with RFID coding protects multiple access points on enclosed conveyor

Enclosed conveyors are an efficient way of preventing contamination in hygienic production systems. Doors onto the conveyor are provided wherever the operator needs access for set-up, maintenance or troubleshooting. To protect the operator and preserve process hygiene, RFID-coded safety sensors are fitted to each door. These cascadable devices with IP6K9K protection and Ecolab approval, are ideal for hygienic conveyor systems, where they reliably inhibit operation as soon as any door is opened.

INDUSTRIES

Automotive production and supply, machine tool, packaging, logistics, materials handling, assembly, automation, robotics

Robotics

Machine tools

Automotive industry

Logistics systems

SAFETY SENSORS

MAGNETIC AND RFID

NON-CONTACT MONITORING OF DOORS

Magnetic and **RFID** safety sensors are ideal for monitoring guard doors, hoods or covers. Their compact housings with standard fixing are particularly suitable for washdown applications in the food industry. RFID types are also ideal for multi-sensor applications, such as long assembly lines. Thanks to non-contact operation and coded communication, service life is very long.

KEY ADVANTAGES

- ✓ Up to category 4, PL e according to EN/ISO 13849-1
- ✓ Operating distance up to 18 mm
- ✓ PVC cable or M12 pigtail connection
- ✓ Certified TÜV, CE and UL
- ✓ IP6K9K, Ecolab

MAGNETIC

- ✓ Safety sensor with frontal or 90° actuation
- ✓ Magnetically coded, ISO 14119 type 4
- ✓ Detection through metal plate possible
- ✓ Sizes 36 × 26 × 13 mm and 88 × 25 × 13 mm

RFID

- ✓ Safety sensor with RFID coding (random or teachable) ISO 14119 type 4
- ✓ Compact size 36 × 26 × 13 mm
- ✓ Cascadable up to 30 units
- ✓ EDM and diagnostic function

Some light curtain applications require special accessories. For example, mirror columns can be used to deflect light beams for multi-sided protection. Also if the distance between the light-curtain sender and receiver is long, a laser tool simplifies alignment. Many other accessories are available in the Accessories section of this catalog (page 298).

ACCESSORIES

SAFETY

MIRROR & DEVICE COLUMNS

MISCELLANEOUS

KEY ADVANTAGES

MIRROR & DEVICE COLUMNS

- ✓ Multiple or single mirrors available
- ✓ Different heights available

MISCELLANEOUS

Relay

- ✓ Performance Level (PL) e and category 4 according to EN/ISO 13849-1
- ✓ Manual or automatic restart
- ✓ Short response time

Mounting Brackets

Top/bottom mounting brackets

- ✓ Synthetic mounting brackets
- ✓ Pair of brackets supplied with each bracket

Side/end mounting brackets

- ✓ Metal mounting brackets

Safety Filter

- ✓ Integrated RC filter for counter signal cut
- ✓ Possibility to connect sender and receiver unit on same connector

Laser alignment tool

- ✓ Easily clippable onto Safetinex YBB and YCA devices
- ✓ Range: up to 50 m

RADIO FREQUENCY IDENTIFICATION SYSTEMS (RFID)

RFID

LOW AND HIGH FREQUENCY

HIGHLIGHTS

- ✓ Low- and high-frequency (LF and HF) systems networkable on ContriNET or on conventional PC using USB connection
- ✓ Widest fieldbus coverage on market

LF SYSTEM

- ✓ All-metal housings, IP68 and IP69K
- ✓ Food safe and saltwater resistant (316L/V4A)
- ✓ All tags embeddable in metal

HF SYSTEM

- ✓ ISO/IEC 15693 compatible
- ✓ Fast data transfer time
- ✓ User-defined password protection features

NEW

- ✓ HF Read/Write Modules with  IO-Link
- ✓ HF tags for high temperatures
- ✓ LF and HF Read/Write Modules with USB connection

INTRODUCTION

RFID SYSTEMS

RFID (Radio Frequency IDentification) is used in numerous automation and logistics domains. It allows objects to be identified by means of electronic labels (transponders or tags).

Compared to classic systems, such as bar codes or laser marking, RFID technology offers important advantages. Transponder information can be read or written even when there is no direct line of sight between it and the Read/Write Module. In addition, information can be added, modified or replaced. It is a useful technology for automated production, reducing human error while increasing reliability, flexibility and traceability.

ConIdent® (also called ConID) is the general name of the Contrinex RFID system, including transponders, Read/Write Modules and interfaces in both low-frequency (LF) and high-frequency (HF) technology.

ContriNET is the product name of the Contrinex RFID network and protocol. The ContriNET protocol uses an RS-485 physical layer, which allows LF and/or HF Read/Write Modules to be daisy-chained, reducing the total number of interfaces.

- Up to 10 ContriNET RWMs with one USB interface
- Up to 31 ContriNET RWMs with one industrial bus interface
- Up to 254 ContriNET RWMs on a half-duplex RS-485 interface

While the usual interfaces allow connection of a limited number of Read/Write Modules (typically 4), ContriNET RWMs can be used to reduce the number of interfaces, which makes the cost of a ConID system more economic than competitive RFID products.

In principle, a ContriNET network can extend to a length of 200 m.

☑ **IO-Link** is a point to point communication standard (ISO 61131-9), allowing the connection of a maximum of 8 RFID RWMs in parallel on a single IO-Link master, allowing a fast and easy machine setup and reducing programming cost.

RFID datas are exchanged over process data registers (input/output) at a constant cycle time (typically 10 ms) and Contrinex RWMs are compatible with any ISO 15693 transponder on the market. Maximum cable length between an IO-link device and a master is limited by the standard at 20 m.

Every RFID system can have one of the following three topologies:

TECHNOLOGY

LOW-FREQUENCY (LF) RFID (31.25 kHz)

Contrinex LF RFID technology features not only conventional plastic components, but also a range of all-metal Read/Write Modules and transponders in stainless steel. These devices are particularly suitable for difficult operating environments where they will be exposed to cleaning, harsh chemicals, water and frost. They are also highly resistant to mechanical shocks.

- Non-standard technology (proprietary data communication)
- Reads and writes through metal
- Works in a metallic environment (fully embeddable)
- High resistance in harsh environments

HIGH-FREQUENCY (HF) RFID (13.56 MHz)

Contrinex HF RFID technology complies with ISO/IEC 15693 and is therefore open to any components that meet this standard. HF systems allow fast communication between transponders and Read/Write Modules as well as extended functionality for tag data protection.

- ISO/IEC 15693
- Anti-collision, in case of multiple tag detection
- High-temperature tags embeddable in metal (180°C / 356°F)
- High-temperature tags for PWIS/LABS free applications (250°C / 428°F)

RFID COMPONENTS

TRANSPONDERS (TAGS)

A transponder is an electronic product that stores data. Transponder memory includes a unique pre-set number as an identifier and a memory area for writing user application data in relation to tagged product information. Writable data may include, for example, the object's history or the parameters of operations to which it will be subjected.

INTERFACES

An interface connects the Read/Write Modules to an industrial fieldbus. ConID interfaces are available for PROFIBUS, DeviceNet, EtherNet/IP, PROFINET, EtherCAT, POWERLINK, Ethernet TCP/IP and USB.

READ/WRITE MODULES (RWMs)

A Read/Write Module is a device that allows data to be read from or written to a transponder.

APPLICATION

RFID technology with IO-Link connectivity eliminates hose-coupling errors in fluidized pneumatic-transport systems

Bulk-handling- and pneumatic-transport-system designers use RFID technology to eliminate connection errors at manual hose-coupling stations for fluidizable materials. Coupling stations, with IO-Link-enabled RWMs mounted on each outlet pipe, use manual quick-release hoses to feed materials to multiple machines. RFID tags, mounted integrally within each hose coupling and blanking cap, identify the mating parts uniquely, allowing individual outlet/hose combinations to be verified at the time of connection.

IO-Link R/W MODULES

RFID

IO-Link – EASY TO GO!

Ideal for Industry 4.0 solutions, IO-Link read/write modules (RWMs) combine two of the key communication standards in one device: ISO 15693 at the read-write head for communication with tags and ISO 61131-9 at the S12 connector for communication with the control system. Their simplified, plug-and-play installation ensures easy, cost-effective integration.

KEY ADVANTAGES

- ✓ **IO-Link** protocol V1.1 with a single operating mode
- ✓ **IO-Link Device:**
 - ✓ Scan UID and Read/Write RFID data on transponder whether automatically or trigger based
 - ✓ Two alarms configurable to monitor transponder-in-range time or RSSI level
 - ✓ Get UID history list with time stamps
 - ✓ Secure mode to add security in the transponder memory access
 - ✓ Locate/FindMe function to quickly identify RWM mounted in a machine
 - ✓ New Diagnostic function such as individual system time, power-on cycle counter, RFID Error counter
- ✓ Stand-alone SIO: Switching on tag presence, data comparison and alarm conditions
- ✓ Temperature range $-25^{\circ}\text{C} \dots +80^{\circ}\text{C}$ ($-13 \dots 176^{\circ}\text{F}$)
- ✓ Integral S12 connector with integrated bi-color LED
- ✓ IP67 (IP68 and IP69K for C44)

APPLICATION

RFID technology for automated testing and tracking of individual motors

Product testing lines typically comprise several test stations, each performing a fixed sequence of tests. For efficient real-time monitoring, identification systems must integrate well into the overall control system.

In a typical RFID system, part carriers are equipped with tags and every test station has an RWM. To program the testing machine, the RWM reads from each tag the type of test required for an individual part. After each test, the RWM writes the results back into the appropriate tag memory address/location. Test reports are automatically forwarded to the controller for product acceptance or rejection and fault correction.

BASIC AND USB SYSTEM

RFID

FIRST CHOICE FOR HIGH AND LOW FREQUENCY

Basic transponders (tags) and read/write modules (RWMs) provide cost-effective solutions with ISO/IEC 15693-compatible HF transponders or proprietary LF transponders. Data protection is excellent, transfer time is fast and all components use the same ContriNET protocol with an RS-485 or USB physical layer. For hardware connection to a PC computer, USB RWMs are an ideal solution as they provide an USB output on their integral connector cable (2 m).

KEY ADVANTAGES

Basic RWMs and tags

- ✓ ContriNET RS-485 protocol with outstanding fieldbus coverage
- ✓ LF and HF RWMs can be daisy-chained on same network
- ✓ HF and LF passive tags, no battery required
- ✓ LF tags embeddable in metal
- ✓ Insensitive to dirt
- ✓ Tag temperature range $-40 \dots +125^{\circ}\text{C}$ ($-40 \dots +257^{\circ}\text{F}$), IP67
- ✓ RWM temperature range $-25 \dots +80^{\circ}\text{C}$ ($-13 \dots +176^{\circ}\text{F}$), IP67, integral S12 connector

USB RWMs and interface

- ✓ ContriNET USB protocol for direct connection to PC (non-networkable)
- ✓ Compatible with ContriNET BASIC support tools and DEMO software
- ✓ DLL for easy development of custom solutions
- ✓ Temperature range $-25 \dots +70^{\circ}\text{C}$ ($-13 \dots +158^{\circ}\text{F}$), IP67, integral USB A male connector

APPLICATION

RFID technology used to identify workpiece carriers and initiate automated washing

In the harsh environment of a washing station, RFID tags and RWMs are exposed to hot water, mechanical shocks, corrosive chemicals and high-pressure jetting. Despite these challenges, identification systems must operate continuously with high reliability. Typically, RFID tags are mounted on the part carriers. On arrival at the washing station, information from the tag is used to select the correct washing cycle for the part type and process.

INDUSTRIES

Automotive production and supply, maritime, food and beverage

Autoclave application

Automotive part sensing

Maritime industry

Brewery production equipment

EXTREME AND WASHDOWN

RFID

HIGHEST MECHANICAL AND CHEMICAL RESISTANCE

Read/write modules (RWMs) and embeddable tags from these two ranges feature robust, full-metal, stainless-steel construction. They offer outstanding performance in metallic environments and are insensitive to dirt and metal chips. For the highest mechanical and chemical resistance, **Washdown** components in food-grade stainless steel (V4A/AISI 316L) are fully sealed and laser welded. They function reliably when immersed in fluids such as water or oil.

KEY ADVANTAGES

- ✓ LF passive tags, no battery required
- ✓ If the ContriNET protocol is used, LF components can share one network with HF types, including the full range of interfaces
- ✓ Insensitive to dirt
- ✓ Outstanding performance in metallic environments
- ✓ Tags readable/writable through metal
- ✓ Tags fully embeddable, including in metal
- ✓ Enclosure rating IP68 & IP69K

Extreme RWMs and tags

- ✓ All-metal, stainless-steel housings (V2A/AISI 304) resist corrosion, impacts and abrasion
- ✓ Suitable for use in harsh environments, such as the steel industry, agriculture and other outdoor applications
- ✓ Temperature range: tags $-40 \dots +95^{\circ}\text{C}$ ($-40 \dots +203^{\circ}\text{F}$), RWMs $-25 \dots +80^{\circ}\text{C}$ ($-13 \dots +176^{\circ}\text{F}$)

Washdown RWMs and tags

- ✓ All-metal housings in food-grade stainless steel (V4A/AISI 316L) resist saltwater, solvents, corrosion, impacts and abrasion
- ✓ Designed for demanding clean-in-place (CIP) applications within the food, pharmaceutical and other industries
- ✓ Temperature range $-40 \dots +125^{\circ}\text{C}$ ($-40 \dots +257^{\circ}\text{F}$)

APPLICATION

RFID tags withstand elevated temperatures during automotive paint curing

Identification components in paint shops are exposed to a variety of rinsing, coating and burning operations, including electrophoresis. Since soiling makes visual identification difficult or impossible, rugged RFID systems are an excellent solution. The RFID tag accompanies each product throughout all painting processes. It can store individual data, including customer requirements, directly on the product or carrier. This allows highly automated customized processes, with smaller batches and central data storage.

INDUSTRIES

Automotive production and supply, maritime, food and beverage

Paint shop in automotive industry

Maritime industry

Brewery production equipment

Automotive part sensing

HIGH TEMPERATURE TAGS

RFID

READY TO BAKE

Designed for environments up to 180 or 250°C, **High Temperature** tags offer exceptional longevity and a thermal-cycling reliability of 1000 hours (or 1000 cycles). Tags are insensitive to dirt and provide between 112 and 2000 Bytes of user memory. As passive devices, no battery or other power source is required. Housings are impervious (IP68 and IP69K).

KEY ADVANTAGES

- ✓ High frequency, fully compatible with ISO/IEC 15693
- ✓ Exceptionally long life-expectancy, even under intense read/write and temperature cycling
- ✓ Insensitive to dirt

Ø26 mm, PPS housing

- ✓ Temperature range –25 ... +180°C (–13 ... +356°F)
- ✓ Embeddable in metal
- ✓ User memory size (EEPROM): 160 Byte

Ø50 mm, LCP housing

- ✓ Temperature range –25 ... +250°C (–13 ... +482°F)
- ✓ 100% silicone-free, ideal for paint-shop applications (LABS-free, PWIS-free)
- ✓ User memory size:
 - ✓ FRAM technology: 2000 Byte (RTP-0502-062)
 - ✓ EEPROM technology: 112 Byte (RTP-0502-082) and 160 Byte (RTP-0502-022)

To bring overall system-integration cost down, an RFID interface is an ideal solution. It simplifies the software-integration effort, which typically represents up to 50% of the total implementation cost for a small project. Assuring shortened software-development time at a modest cost premium, Contrinex interfaces are ready to tackle the most demanding and time-critical tasks.

INTERFACES

RFID

MARKET-LEADING FIELDBUS COVERAGE

KEY ADVANTAGES

- ✓ Widest fieldbus coverage on market
- ✓ Interfaces for connection of ContriNET to PROFIBUS, DeviceNet, EtherNet/IP, PROFINET, EtherCAT, POWERLINK and Ethernet TCP/IP
- ✓ Comprehensive accessories including T-connectors and line terminators
- ✓ TCP/IP interface in lightweight plastic, 120 × 80 × 30 mm

INTERFACES

- ✓ Compact, ready-to-use device
- ✓ Allows connection of ContriNET to an industrial fieldbus
- ✓ Synthetic housing in ABS
- ✓ Mounting on rail DIN EN 60715

USB ADAPTOR

- ✓ Synthetic ABS housing
- ✓ Serial RS-485 connection to ContriNET
- ✓ USB connection to control PC

ACCESSORIES FOR USB INTERFACE

CONNECTION

The adaptor acts as the interface between a network of Read/Write Modules and the USB port of the control PC. The delivery package includes a USB cable.

EXTERNAL POWER SUPPLY UNIT

An external power supply unit (24V / 15W, 625 mA) is included in the delivery package.

DRIVERS AND SOFTWARE

Drivers compatible with the various Windows versions and software for demonstration and training (ContriNET HF/LF) can be downloaded from the RAS-6766-020 product page of the Contrinex website.

Contrinex RFID accessories make it easy for system designers to develop simple applications from scratch. RFID Starter Kits, available with either LF or HF technology, contain all the elements needed to build a basic RFID system – including RWMs, transponders, cables, connectors and power supply – in a handy carry-case. For hard-to-reach applications where it's impossible to mount a powered RWM close to a tag, passive RFID couplers extend the sensing distance without the need for any physical connection. Optionally, for LF applications, a hand-held reader with an integral RWM offers a non-contact alternative.

ACCESSORIES

RFID

KEY ADVANTAGES

STARTER-KIT RFID LF

- ✓ Set containing all the components needed to develop a simple LF RFID application
- ✓ 2 read/write modules (RWM)
- ✓ 6 transponders
- ✓ 1 USB adaptor with power supply
- ✓ Connection cables

STARTER-KIT RFID HF

- ✓ Set containing all the components needed to develop a simple HF RFID application
- ✓ 2 read/write modules (RWM)
- ✓ 5 transponders
- ✓ 1 USB adaptor with power supply
- ✓ Connection cables

HANDHELD DEVICE

- ✓ Portable and light
- ✓ No connector
- ✓ Robust and ergonomic housing
- ✓ Simple navigation
- ✓ Integrated RFID read/write module
- ✓ Belt clip
- ✓ Integrated clock and calendar
- ✓ Dock-in/charging station included

RFID COUPLERS

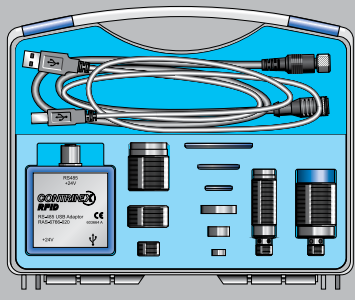

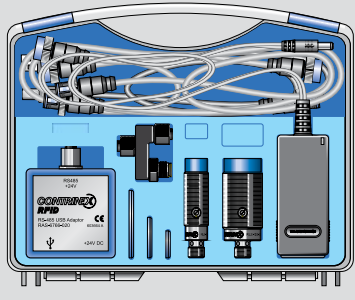

- ✓ Metal threaded cylindrical housings
- ✓ Sensing face of PBTP (polybutylene terephthalate) or stainless steel V2A
- ✓ Insensitive to dirt
- ✓ Passive (without power supply)

HIGHLIGHTS

- ✓ Comprehensive cable and connector program
- ✓ IP69K and Ecolab-certified cables for the food and beverage industry (on demand)
- ✓ UL-approved cables and connectors
- ✓ Cables with straight or right-angle sockets
- ✓ Distribution boxes
- ✓ Field-attachable connectors
- ✓ T-connectors (on demand)
- ✓ User-friendly standard portfolio
- ✓ Sensor testers for fast field checks
- ✓ Sensor mounting clamps
- ✓ Bases for mounting clamps
- ✓ Mechanical stops
- ✓ Amplifiers for 3-wire and NAMUR sensors (on demand)

GLOSSARY

INDUCTIVE SENSORS

PHOTOELECTRIC SENSORS

A

AUTOCOLLIMATION

Photoelectric sensors using the autocollimation principle are characterized by the fact that the optical axes of the emitting and receiving channels are identical. This is possible with light from one of the channels being deflected by means of a semi-transparent mirror (Fig. 12). This principle completely eliminates the interfering blind zone often found in the proximity of the sensor, which is of special advantage when using reflex sensors.

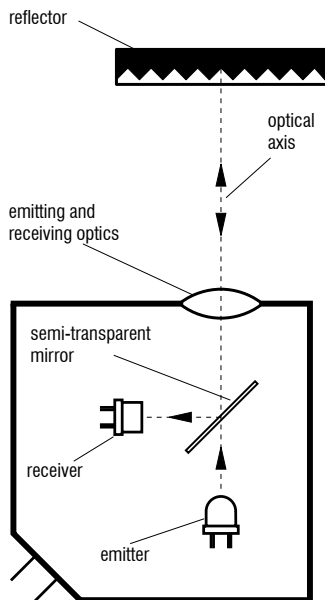

Fig. 12

B

BACKGROUND SUPPRESSION

The light pulse from the emitting diode leaves the optical system as a focused, almost parallel, light beam. On meeting an object in its path, part of the beam is diffusely reflected, and in turn, part of this reflected light falls on the PSD (Position-Sensitive Device) housed in the same sensor (Fig. 13).

Fig. 13

Depending on the distance of the target from the device, the light falls on a particular spot of the PSD, and a corresponding reception signal is emitted, indicating that an object is present at a certain distance from the device. The analyzing circuit compares the signal received with the preset operating distance (adjusted by means of the built-in potentiometer), and, if the distance of the object is less than, or equal to, the preset operating distance, the output is switched. Contrary to an energetic diffuse sensor, the operating distance depends only to a very small extent on the target's size or color, or on the nature of its surface. The object can therefore be easily discerned, even against a light background.

C

CLASSICS FAMILY

The **Classics** family (series 600) is one of three inductive sensing technologies offered by Contrinex. **Classics** family sensors rely on conventional inductive oscillator and coil technology (see page 30).

Sensors are sized from Ø3 up to M30 and C44 (40 × 40 mm). PNP, NPN and 2-wire AC/DC output configurations are available, combined with sensing distances between 0.6 mm and 40 mm. The **Classics** technology family includes devices from the following ranges: **Basic, Miniature, 2-Wire, Extra Pressure, Extra Temperature, High Temperature and Washdown.**

E

EXCESS-GAIN INDICATION (SYSTEM RESERVE INDICATION)

The excess-gain indication circuit detects the excess radiation power which falls on the light incidence surface and is processed by the light receiver. The excess gain can decrease in time due to dirt, a change in the target's reflection factor, and aging of the emitter diode, so that reliable operation can no longer be guaranteed. Some devices are therefore equipped with a second LED (green), which lights up when less than approximately 80% of the available operating distance is used. Models with an excess-gain output make the excess-gain signal available to the user for further processing. Thus, operating conditions which are no longer reliable can be recognized in time.

Fig. 14

EXTRA DISTANCE FAMILY

The **Extra Distance** family (series 500/520) is one of three inductive sensing technologies offered by Contrinex. **Extra Distance** family sensors rely on conventional inductive oscillator and coil technology, but with a completely different signal evaluation circuit for better stability and therefore long operating distances. The most important contribution to this comes from the Contrinex Condist® oscillator (see page 30).

Sensors are sized from Ø4 to M30, with long operating distances up to 40 mm. The **Extra Distance** technology family includes devices from the **Basic, Miniature, Extra Pressure, High Pressure and Analog Output** ranges.

F

FULL INOX FAMILY

The **Full Inox** family (series 700) is one of three inductive sensing technologies offered by Contrinex. **Full Inox** family sensors rely on Contrinex's Condet® technology (see page 31).

Full Inox sensors have a one-piece, stainless steel housing and are exceptionally robust and chemically resistant. They are not only the most durable inductive sensors on the market, but also offer long operating distances on any conductive metal.

Sensors are sized from Ø4 to M30 and cuboid variant of 20 × 32 × 8 mm, with long operating distances up to 40 mm and protection class IP67 and IP69K.

The **Full Inox** technology family includes devices from the **Basic, Miniature, Extreme, High Pressure, Washdown, Weld-Immune, Chip-Immune, Double-Sheet** and **Maritime** ranges.

H

HYSTERESIS

Hysteresis (differential travel) causes a defined switching behavior of the device (Fig. 15). The sensing range always refers to the switch-on point. Distance hysteresis is only useful for the diffuse sensor model and its related fiber version.

Fig. 15

Hysteresis (differential travel) causes a defined switching behavior of the device (Fig. 16). The operating distance always refers to the switch-on point. Namur devices and those with analog output have continuous transmission behavior, i.e. there is no hysteresis.

Fig. 16

I

IO-LINK

IO-Link is an industry-standard (IEC 61131-9) point-to-point communication protocol for digital sensors and actuators. Using simple three- or four-wire cables, IO-Link enables these devices to communicate via an IO-Link master to any industrial-fieldbus network, or directly using a standard IO signal. IO-Link is highly flexible, allowing user-defined sensor configuration of many functions.

M

MOUNTING

EMBEDDABLE SENSORS

Embeddable sensors may be flush mounted in all metals. For trouble-free operation, a free zone according to Fig. 17 should be observed.

Fig. 17

QUASI-EMBEDDABLE SENSORS

When installing quasi-embeddable Extra Distance sensors (500 and 520 series) in conductive materials (metals), the devices must **protrude** by a distance **X**, according to Fig. 18. Further, a free zone of $3 \times s_n$ must be observed. Flush mounting in non-conducting materials is permitted.

Fig. 18

NON-EMBEDDABLE SENSORS

When mounting non-embeddable sensors in conducting materials (metals), minimum distances to the conducting material must be maintained according to Fig. 19. Flush mounting in non-conducting materials is permitted.

Fig. 19

O

OPERATING DISTANCE

The operating distance of inductive sensors is the distance at which a target approaching the sensing face triggers a signal change. The operating distance is measured according to IEC 60947-5-2/EN 60947-5-2, using a **standard square target** moving **axially** (Fig. 20).

Fig. 20

This target is made of steel, e.g. type FE 360 in accordance with ISO 630, with a smooth surface, square shape, and thickness of 1 mm (Fig. 21). The sides equal the **diameter** of the inscribed circle of the sensing face or **three times the rated operating distance s_n** of the sensor, whichever is the greater.

Fig. 21

Rated operating distance s_n

This is the operating distance for which the sensor is designed. It can be found under "technical data".

Effective operating distance s_e

The measured operating distance for a given switch according to IEC 60947-5-2/EN 60947-5-2.

$$0.9 s_n \leq s_e \leq 1.1 s_n$$

This means that the manufacturing tolerance must not exceed $\pm 10\%$.

Usable operating distance s_u

This distance takes into account expected additional deviations caused by temperature and supply voltage fluctuations within the specified range.

$$0.9 s_e \leq s_u \leq 1.1 s_e$$

The temperature and supply voltage ranges can be found under "technical data".

Assured operating distance s_a

$$0 \leq s_a \leq 0.81 s_n$$

This operating distance is guaranteed by the manufacturer for all specified operating conditions. It is the **basis for a safe design**.

P

PARALLEL CONNECTION

Connecting sensors in parallel, in order to perform logic functions, is possible without any problem (Figs. 22 and 23).

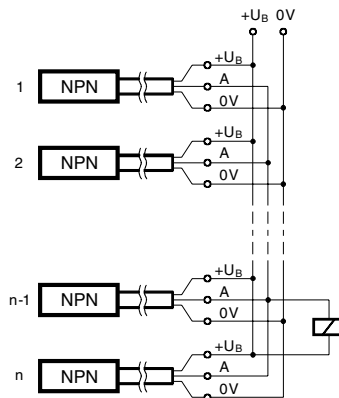

Fig. 22

Fig. 23

Please note:

- The no-load supply current increases.
- Leakage currents add up, so that, even when closed, an inadmissible voltage drop can occur at the output.

S

SENSING RANGE

The specified sensing range of photoelectric sensors is the maximum usable distance between the device and the standard target (diffuse sensors); between the device and the reference reflector (reflex sensors), and between the emitter and the receiver (through-beam sensors). The potentiometer must be set for maximum sensitivity, or for diffuse sensors with background suppression, for maximum sensing range. Moreover, the specified reflector (reflex sensors) or standard target (diffuse sensors) must be used.

SERIES CONNECTION

The connection of sensors in series in order to achieve logic functions is possible, but not recommended. The same effect can be achieved by the **parallel connection** of sensors with **NC function** (instead of the series connection of models with NO function), or vice versa. However, please note that, as a result, the output signal is inverted.

SMART SENSORS

SMART Sensors are digital devices that offer the advantages of the industry-standard IO-Link SSP 3.3 profile plus the extreme flexibility of leading-edge multi-mode sensing capabilities, including distance, temperature and cycle counting. Depending on the user-defined mode of operation, measurements may be output as either routine process data or stand alone IO event data.

STANDARDS

The sensors in this catalog comply, either completely or to a great extent, with the following standards:

- IEC 60947-5-1, **IEC 60947-5-2**, EN 60947-5-1, **EN 60947-5-2**
- IEC 61000-4-1, 61000-4-2, 61000-4-3, 61000-4-4, DIN EN 55011, DIN EN 55081-2, DIN EN 50140
- IEC 60529 / DIN 40050
- IEC 60947-1 / EN 60947-1 / DIN VDE 0660, part 100, part 100 A3, part 200, part 208
- DIN EN 50008, 50010, 50025, 50026, 50032, 50036, 50037, 50038, 50040, 50044

SWITCHING FREQUENCY

The maximum switching frequency of inductive sensors indicates the highest permissible number of pulses per second for a constant pulse/pause ratio of 1:2 at **half the rated operating distance s_n** . Measurement is according to IEC 60947-5-2 / EN 60947-5-2 (Fig. 24).

Fig. 24

STANDARDS

In the case of photoelectric sensors, the frequency of operating cycles (f) is determined from the formula:

$$f = \frac{1}{t_{on} + t_{off}}$$

where: t_{on} is the turn on time
 t_{off} is the turn off time

t_{on} and t_{off} are measured in accordance with IEC 60947-5-2 2007 paragraph 8.5.3.

Fig. 25: Through-beam and reflex modes: the light beam must be fully broken by the target.

Fig. 26: Diffuse mode: the target must be of the same material as the standard target.

TIGHTENING TORQUE

TIGHTENING TORQUE

Over-tightening of the nuts can mechanically damage cylindrical sensors. The specified maximum permissible tightening torques must therefore not be exceeded.

WIRING

WIRING

Sensor cables must not be laid in parallel in the same cable runs as cables connected to **inductive loads** (i.e. protection solenoids, magnetic rectifiers, motors, etc.), or which conduct currents from **electronic motor drives**. Leads should be kept as short as possible; however, with suitable wiring (low coupling capacitance, small interference voltages), they can be up to 300 m long.

To reduce electromagnetic interference, apply the following measures:

- Maintain the distance to interfering cables > 100 mm
- Use shields
- Install inductances (contactors, magnetic rectifiers, relays) with RC networks or varistors
