

Triad's kitting & sub-assembly service allows you to focus on your core competencies by eliminating non-value added activities.

Kitting & sub-assemblies reduce your internal costs

ASSEMBLY TIME

With Triad's kitting service, parts & components can come pre-assembled, organized, and packaged to significantly reduce the time your team spends assembling pieces in-house.

INVENTORY CONTROL

Eliminate the redundancies and complexities inherent with managing hundreds of individual parts.

PURCHASING TIME

Triad kits and sub-assemblies are assigned a unique part number that includes all the pieces/parts that make up your kit, so your purchasing department can order a single line item.

RECEIVING TIME

Eliminate the cost of having to receive in hundreds of parts. With a Triad kit, there's one part number.

ELIMINATE COMPLEXITY IN INVOICING

Kits are designed to your specifications

You'll work with your Triad Account Manager to make sure your kit has everything that you need, exactly the way that you need it.

The Design Process

STANDARDIZATION

Determine what pieces/parts are required for your application.

PACKAGING

How would you like your components to be delivered and presented (ie. boxes, bags, etc.)?

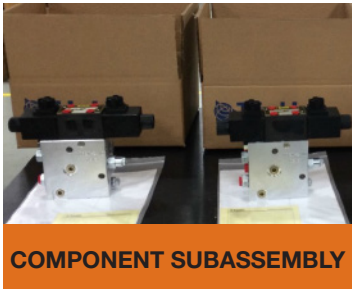

LABELING

Kits can be labeled in the form that meets your needs (ie. one master label, individually labeled parts).

BEFORE
Multiple invoices.

AFTER
Consolidated invoice with 1 line item.

The image shows a stack of multiple 'PACKING LIST' forms on the left, representing a fragmented invoicing process. On the right, a single, larger 'PACKING LIST' form is shown, representing a consolidated invoice. Both forms include the Triad Technologies logo, contact information, and a detailed table of parts with columns for Part #, Qty, Description, and Unit.
